

ICS5000-C24GP4XS

Layer 3 Ethernet POE Switch

User Manual

Document Version: 01

Issue Date: 06/19/2024

Preface

Audience

This manual applies to the following engineers:

- Network administrators
- Technical support engineers
- Network engineer

Port Convention

The port number in this manual is only an example, and does not represent the actual port with this number on the device. In actual use, the port number existing on the device shall prevail.

Text Format Convention

Format	Description
" "	Words with "" represent the interface words. Such as: "Port No."
>	Multi-level path is separated by ">". Such as opening the local connection path description: Open "Control Panel> Network Connection> Local Area Connection".
Light Blue Font	It represents the words clicked to achieve hyperlink. The font color is as follows: 'Light Blue'.
About this chapter	The section 'about this chapter' provide links to various sections of this chapter, as well as links to the Principles Operations Section of this chapter.

Symbols

Format	Description
--------	-------------

Format	Description
 Notice	Remind the announcements in the operation, improper operation may result in data loss or equipment damage.
 Warning	Pay attention to the notes on the mark, improper operation may cause personal injury.
 Note	Make a necessary supplementary instruction for operation description.
 Key	Configuration, operation, or tips for device usage.
 Tips	Pay attention to the operation or information to ensure success device configuration or normal working.

Button Operation Convention

Format	Description
	There is a logout button in the upper right corner of the webpage. After clicking it, the webpage returns to the login page.
	There is a port button in the upper right corner of the webpage. Click or press F2 to view the port status, and press F2 or Esc to close the port status page.
	There is a restart button in the upper right corner of the webpage. After clicking, a restart confirmation box pops up. After confirmation, the device will restart.
	There is a Save button in the upper right corner of the webpage. Click it to save the current device configuration. After setting the device, the save icon will flash to remind the user to save the configuration, so as to avoid losing unsaved configuration information due to restart and other operations.
	Click the Add button to add a line of configuration. Note that repeated configuration may result in data overwrite.
	Check the line to be deleted, and then click the Delete button to delete the configuration.
	Check the line to be configured, and then click the configure button to enter the configuration page.
	Click the function status button to switch the function status,  means on and  means off.

Format	Description
	Click the Set button to submit the current configuration.
	Click the “Clear” button to clear the information of current page.
	Click the Refresh button to refresh the information of current page.

1 Configuration Preparation

1.1 Accessing the Switch Through HTTP

When accessing the switch through Web, please make sure that the applied browser complies with the following requirements:

HTML of version 4.0

HTTP of version 1.1

JavaScript™ of version 1.5

What's more, please ensure that the main program file, running on a switch, supports Web access and your computer has already connected the network in which the switch is located.

1.1.1 Initially Accessing the Switch

When the switch is initially used, you can use the Web access without any extra settings:

1. Modify the IP address of the network adapter and subnet mask of your computer to **192.168.0.1** and **255.255.255.0** respectively.
2. Open the Web browser and enter **192.168.0.1** in the address bar. It is noted that **192.168.0.1** is the default management address of the switch.
3. If the Internet Explorer browser is used, you can see the dialog box in figure 1. Both the original username and the password are "admin", which is capital sensitive.

Figure 1: ID checkup of WEB login

4. After successful authentication, the systematic information about the switch will appear on the IE browser.

1.1.2 Upgrading to the Web-Supported Version

If your switch is upgraded to the Web-supported version during its operation and the switch has already stored its configuration files, the Web visit cannot be directly applied on the switch. Perform the following steps one by one to enable the Web visit on the switch:

1. Connect the console port of the switch with the accessory cable, or telnet to the management address of the switch through the computer.
2. Enter the global configuration mode of the switch through the command line, the DOS prompt of which is similar to "Switch_config#".
3. If the management address of the switch is not configured, please create the VLAN interface and configure the IP address.
4. Enter the **ip http server** command in global configuration mode and start the Web service.
5. Run **username** to set the username and password of the switch. For how to use this command, refer to the "Security Configuration" section in the user manual.

After the above-mentioned steps are performed, you can enter the address of the switch in the Web browser to access the switch.

6. Enter **write** to store the current configuration to the configuration file.

1.2 Accessing a Switch Through Secure Links

The data between the WEB browser and the switch will not be encrypted if you access a switch through common HTTP. To encrypt these data, you can use the secure links, which are based on the secure sockets layer, to access the switch.

To do this, you should follow the following steps:

1. Connect the console port of the switch with the accessory cable, or telnet to the management address of the switch through the computer.
2. Enter the global configuration mode of the switch through the command line, the DOS prompt of which is similar to "Switch_config#".
3. If the management address of the switch is not configured, please create the VLAN interface and configure the IP address.
4. Enter the **ip http server** command in global configuration mode and start the Web service.
5. Run **username** to set the username and password of the switch. For how to use this command, refer to the "Security Configuration" section in the user manual.
6. Run **ip http ssl-access enable** to enable the secure link access of the switch.
7. Run **no ip http http-access enable** to forbid to access the switch through insecure links.
8. Enter **write** to store the current configuration to the configuration file.
9. Open the WEB browser on the PC that the switch connects, enter **https://192.168.0.1** on the address bar (**192.168.0.1** stands for the management IP address of the switch) and then press the **Enter** key. Then the switch can be accessed through the secure links.

1.3 Introduction of Web Interface

The Web homepage appears after login, as shown in figure 2:

The screenshot shows the SWITCh web interface. At the top right, there is a control bar with links: [Save All](#) | [Logout](#) | [Port Pane](#). Below this is a navigation bar with [Device Info](#) highlighted. The main content area is titled 'System Information' and contains the following table:

Device Type	SWITCh
BIOS Version	0.3.5
Firmware Version	2.1.1B
Serial No.	200-20013040101
MAC Address	FCFA.F749.0F00
IP Address	192.168.1.79
Current Time	1970-1-1 0:1:20
Uptime	0 Day -0 Hour -1 Minute -20 Second
CPU Usage	1%
Memory Usage	4294967230%

Below the table is a [Refresh](#) button. On the left side, there is a sidebar menu with categories: Device Status, Basic Config, Port Config, L2 Config, Advanced Config, Network Mgr., Diagnostic Tool, and System Mgr. Under 'Device Status', 'Device Info' is selected.

Figure 2: Web homepage

The whole homepage consists of the top control bar, the navigation bar, the configuration area and the bottom control bar.

1.3.1 Top Control Bar

[Save All](#) | [Logout](#) | [Port Panel](#) | [About](#)

Figure 3: Top control bar

Save All	Write the current settings to the configuration file of the device. It is equivalent to the execution of the write command. The configuration that is made through Web will not be promptly written to the configuration file after validation. If you click "Save All", the unsaved configuration will be lost after rebooting.
English	The interface will turn into the English version.
Chinese	The interface will turn into the Chinese version.
Logout	Exit from the current login state. After you click "logout", you have to enter the username and the password again if you want to continue the Web function.

After you configure the device, the result of the previous step will appear on the left side of the top control bar. If error occurs, please check your configuration and retry it later.

1.3.2 Navigation Bar

Figure 4 Navigation bar

The contents in the navigation bar are shown in a form of list and are classified according to types. By default, the list is located at "Runtime Info". If a certain item need be configured, please click the group name and then the sub-item. For example, to browse the flux of the current port, you have to click "Interface State" and then "Interface Flow".

● **Note:**

The limited user can only browse the state of the device and cannot modify the configuration of the device. If you log on to the Web with limited user's permissions, only "Interface State" will appear.

1.3.3 Configuration Area

System Information	
Device Type	SWITCH
BIOS Version	0.3.5
Firmware Version	2.1.1B
Serial No.	200-20013040101
MAC Address	FCFA.F749.0F00
IP Address	192.168.1.79
Current Time	1970-1-1 0:1:20
Uptime	0 Day -0 Hour -1 Minute -20 Second
CPU Usage	1%
Memory Usage	4294967230%

Figure 5 Configuration Area

The configuration display area shows the state and configuration of the device. The contents of this area can be modified by the clicking of the items in the navigation bar.

1.3.4 Bottom Control Bar

Figure 6: Bottom control bar

If you click the **About** button on the top control bar, the bottom control bar appears. The main function of the bottom control bar is to realize the automatic refreshing of the configuration display area. For example, if you click "Interface Flow" in the navigation bar and then click "Refresh", the flow of the interface can be continuously monitored.

After you click "Refresh", the countdown of the next-time refresh will appear on the left side. You can modify the countdown settings by clicking the dropdown list.

● **Note:**

The smaller the countdown value is set, that is, the higher the frequency is, the higher the CPU usage is.

1.3.5 Configuration Area

The configuration area is to show the content that is selected in the navigation area. The configuration area always contains one or more buttons, and their functions are listed in the following table:

Refresh	Refresh the content shown in the current configuration area.
Apply	Apply the modified configuration to the device. The application of the configuration does not mean that the configuration is saved in the configuration file. To save the configuration, you have to click "Save All" on the top control bar.

Reset	Means discarding the modification of the sheet. The content of the sheet will be reset.
New	Creates a list item. For example, you can create a VLAN item or a new user.
Delete	Deletes an item in the list.
Back	Go back to the previous-level configuration page.

2 Basic Configuration

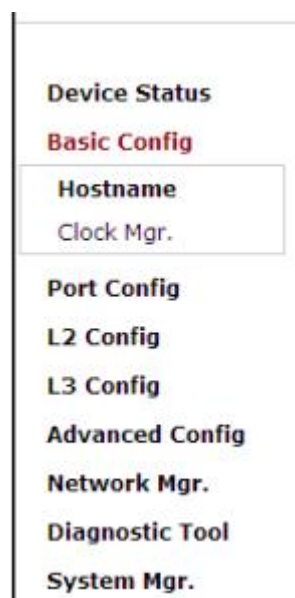

Figure 1 A list of basic configuration

2.1 Hostname Configuration

If you click **Basic Config** -> **Hostname Config** in the navigation bar, the **Hostname Configuration** page appears, as shown in figure 3.

Hostname Configuration

Configure the hostname.

Hostname*

Help

#Configure the hostname of the switch.

Figure 3 Hostname configuration

The hostname will be displayed in the login dialog box.

The default name of the device is "Switch". You can enter the new hostname in the text box shown in figure 3 and then click "Apply".

2.2 Time Management

If you click **System Manage -> Time Manage**, the **Time Setting** page appears.

The screenshot shows the 'Time Setting' page. At the top, there is a 'System Time' field displaying '1970-01-01 00:10:10' and a 'Refresh' button. Below this, there is a 'Select Time-Zone' dropdown menu with '(GMT)Greenwich Mean Time,Dublin,London,Lisbon' selected. There are two radio buttons: 'Set Time Manually' (which is selected) and 'Network Time Synchronization'. Under 'Set Time Manually', there is a 'Set Time' section with input fields for Year (1970), Month (01), Day (01), Hour (00), Minute(s) (10), and Second. Under 'Network Time Synchronization', there are three input fields for 'SNTP Server One', 'SNTP Server Two', and 'SNTP Server Three', and a 'Synchronization Interval' field with the value '1' and the unit 'Minute(s)'. At the bottom, there is an 'Apply' button.

Figure 4 Clock management

To refresh the clock of the displayed device, click "Refresh".

In the "Select Time-Zone" dropdown box select the time zone where the device is located. When you select "Set Time Manually", you can set the time of the device manually. When you select "Network Time Synchronization", you can designate 3 SNTP servers for the device and set the interval of time synchronization.

3 Configuration of the Physical Interface

Figure 1: Physical port configuration list

3.1 Configuring Port Description

If you click **Physical port config -> Port description Config** in the navigation bar, the **Port description Configuration** page appears, as shown in figure 2.

Port	Port Description
G0/1	
G0/2	
G0/3	
G0/4	

Figure 2: Port description configuration

You can modify the port description on this page and enter up to 120 characters. The description of the VLAN port cannot be set at present.

3.2 Configuring the Attributes of the Port

If you click **Physical port config -> Port attribute Config** in the navigation bar, the **Port Attribute Configuration** page appears, as shown in figure 3.

Port	Status	Speed	Duplex	Flow Control	Medium
G0/1	Up	Auto	Auto	Off	Auto
G0/2	Up	Auto	Auto	Off	Auto
G0/3	Up	Auto	Auto	Off	Auto
G0/4	Up	Auto	Auto	Off	Auto
G0/5	Up	Auto	Auto	Off	Auto
G0/6	Up	Auto	Auto	Off	Auto
G0/7	Up	Auto	Auto	Off	Auto
G0/8	Up	Auto	Auto	Off	Auto
G0/9	Up	Auto	Auto	Off	Auto
G0/10	Up	Auto	Auto	Off	Auto

Figure 3 Configuring the port attributes

On this page you can modify the on/off status, rate, duplex mode, flow control status and medium type of a port.

- Note:
- 1. The Web page does not support the speed and duplex mode of the fast-Ethernet port.
- 2. After the speed or duplex mode of a port is modified, the link state of the port may be switched over and the network communication may be impaired.

3.3 Rate control

If you click **Physical port Config -> Port rate-limit Config** in the navigation bar, the **Port rate limit** page appears, as shown in figure 4.

Port	Receive Status	Receive Speed Unit	Receive Speed	Send Status	Send Speed Unit	Send Speed
G0/1	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)
G0/2	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)
G0/3	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)
G0/4	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)
G0/5	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)
G0/6	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)
G0/7	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)
G0/8	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)
G0/9	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)
G0/10	Disable	64kbps	(1-15625)	Disable	64kbps	(1-15625)

Figure 4: Port's rate limit

On this page you can set the reception speed and transmission speed of a port. By default, all ports have no speed limited.

3.4 Port mirroring

If you click **Physical port Config -> Port Mirror** in the navigation bar, the **Port Mirror Config** page appears, as shown in figure 4-5.

Mirrored Port	Mirror Mode
<input type="checkbox"/> G0/1	RX
<input checked="" type="checkbox"/> G0/2	TX

Figure 4-5 Port mirror configuration

Click the dropdown list on the right side of "Mirror Port" and select a port to be the destination port of mirror.

Click a checkbox and select a source port of mirror, that is, a mirrored port.

RX	The received packets will be mirrored to the destination port.
TX	The transmitted packets will be mirrored to a destination port.
RX & TX	The received and transmitted packets will be mirrored simultaneously.

3.5 Loopback Detection

If you click **Physical port Config -> Port loopback detection** in the navigation bar, the **Setting the port loopback detection** page appears, as shown in figure 4-6.

Port	Status	Keepalive Period
G0/1	Enable	3333 (0-32767)Seconds

Figure 4-6: Port loopback detection

You can set the loopback detection cycle on the **Loopback Detection** page.

3.6 Port security

3.6.1 IP Binding Configuration

If you click **Physical port Config -> Port Security -> IP bind** in the navigation bar, the **Configure the IP-Binding Info** page appears, as shown in figure 4-7.

Interface Name	Detail
G0/1	Detail

Figure 4-7 IP binding configuration

Click “Detail” and then you can conduct the binding of the source IP address for each physical port. In this way, the IP address that is allowed to visit the port will be limited.

	Serial number	Address	Operate
<input type="checkbox"/>	1	192.168.0.2	Edit
<input type="checkbox"/>	2	192.168.0.3	Edit

Figure 4-8 Setting the binding of the source IP address

3.6.2 MAC Binding Configuration

If you click **Physical port Config -> Port Security -> MAC bind** in the navigation bar, the **Configure the MAC-Binding Info** page appears, as shown in figure 4-10.

Interface Name	Detail
G0/1	Detail

Figure 4-9 MAC binding configuration

Click “Detail” and then you can conduct the binding of the source MAC address for each physical port. In this way, the MAC address that is allowed to visit the port will be limited.

	Serial number	Address	Operate
<input type="checkbox"/>	1	1234.1234.1234	Edit
<input type="checkbox"/>	2	1234.1234.1235	Edit

Figure 4-10 Setting the binding of the source MAC address

3.6.3 Setting the Static MAC Filtration Mode

If you click **Physical port Config -> Port Security -> Static MAC filtration mode** in the navigation bar, the **Configure the static MAC filtration mode** page appears, as shown in figure 4-11.

Interface Name	Port Mode	Static MAC Filtration Mode
G0/1	Access	Disable <input type="button" value="v"/>

Figure 4-11: Setting the static MAC filtration mode

On this page you can set the static MAC filtration mode. By default, the static MAC filter is disabled. Also, the static MAC filter mode cannot be set on ports in trunk mode.

3.6.4 Static MAC Filtration Entries

If you click **Physical port Config -> Port security -> Static MAC filtration entries** in the navigation bar, the **Setting the static MAC filtration entries** page appears.

Interface Name	Detail
G0/1	Detail

Figure 4-12: Static MAC filtration entry list

If you click “Detail”, you can conduct the binding of the source MAC address for each physical port. According to the configured static MAC filtration mode, the MAC address of a port can be limited, allowed or forbidden to visit.

	Serial number	Filtration Mode	MAC Address	Operate
<input type="checkbox"/>	1	Disable	0001.0002.0003	Edit

Figure 4-13: Setting static MAC filtration entries

3.6.5 Setting the Dynamic MAC Filtration Mode

If you click **Physical port Config -> Port Security -> Dynamic MAC filtration mode** in the navigation bar, the **Configure the dynamic MAC filtration mode** page appears, as shown in figure 4-14.

Interface Name	Dynamic MAC Filtration Mode	Max MAC Address
G0/1	Disable <input type="button" value="v"/>	<input type="text" value="1"/> (1-4095)

Figure 4-14: Setting the dynamic MAC filtration mode

You can set the dynamic MAC filtration mode and the allowable maximum number of addresses on this page. By default, the dynamic MAC filtration mode is disabled and the maximum number of addresses is 1.

3.7 Storm control

In the navigation bar, click **Physical port Config -> Storm control**. The system then enters the page, on which the broadcast/multicast/unknown unicast storm control can be set.

3.7.1 Broadcast Storm Control

Port	Status	Threshold
G0/1	Disable <input type="button" value="v"/>	<input type="text"/> (1-1638400) 100PPS
G0/2	Disable <input type="button" value="v"/>	<input type="text"/> (1-1638400) 100PPS
G0/3	Disable <input type="button" value="v"/>	<input type="text"/> (1-1638400) 100PPS
G0/4	Disable <input type="button" value="v"/>	<input type="text"/> (1-1638400) 100PPS
G0/5	Disable <input type="button" value="v"/>	<input type="text"/> (1-1638400) 100PPS
G0/6	Disable <input type="button" value="v"/>	<input type="text"/> (1-1638400) 100PPS
G0/7	Disable <input type="button" value="v"/>	<input type="text"/> (1-1638400) 100PPS

Figure 5 Broadcast storm control

Through the dropdown boxes in the **Status** column, you can decide whether to enable broadcast storm control on a port. In the **Threshold** column you can enter the threshold of the broadcast packets. The legal threshold range for each port is given behind the threshold.

3.7.2 Multicast Storm Control

G0/38	Disable 		(1-1638400) 100PPS
G0/39	Disable 		(1-1638400) 100PPS

Figure 7 Unknown unicast storm control

In the **Threshold** column you can enter the threshold of the broadcast packets. The legal threshold range for each port is given behind the threshold.

3.8 4.8 Port Protect Group Configuration

Click "Port Config" -> "Port Protect Group Config" in the navigation bar, and enter the configuration page of Port Protect Group List and Port Protect Group Interface Config.

3.8.1 4.8.1 Port Protect Group List

Click "Port Config" -> "Port Protect Group Config" -> "Port Protect Group List" in the navigation bar, and enter the configuration page of "Port Protect Group List".

Click “New” to create a new port protect group, as shown in the above figure.

Tick one port protect group and delete it. The port protect group is 0 by default, which cannot be deleted.

3.8.2 4.8.2 Port Protect Group Interface Configuration

Click "Port Config" -> “Port Protect Group Config” -> “Port Protect Group Interface Config” in the navigation bar, and enter the configuration page of “Port Protect Group Interface Config”.

Port	Port Protect Group
g0/1	<input type="text"/>
g0/2	<input type="text"/>

The port protect group must be a created group. If one port has configured the default protect group, other ports can only be configured with the default protect group.

Figure 1: Layer-2 configuration list

4.1 VLAN Settings

4.1.1 VLAN List

If you click **Layer-2 Config -> VLAN Config** in the navigation bar, the **VLAN Config** page appears, as shown in figure 2.

	VLAN ID	VLAN Name	Operate
<input type="checkbox"/>	1	Default	Edit

Figure 2 VLAN configuration

The VLAN list will display VLAN items that exist in the current device according to the ascending order. In case of lots of items, you can look for the to-be-configured VLAN through the buttons like “Prev”, “Next” and “Search”.

You can click “New” to create a new VLAN.

You can also click “Edit” at the end of a VLAN item to modify the VLAN name and the port’s attributes in the VLAN.

If you select the checkbox before a VLAN and then click “Delete”, the selected VLAN will be deleted.

- **Note:**

By default, a VLAN list can display up to 100 VLAN items. If you want to configure more VLANs through Web, please log on to the switch through the Console port or Telnet, enter the global configuration mode and then run the “**ip http web max-vlan**” command to modify the maximum number of VLANs that will be displayed.

4.1.2 VLAN Settings

If you click “New” or “Edit” in the VLAN list, the VLAN configuration page appears, on which new VLANs can be created or the attributes of an existent VLAN can be modified.

Revising VLAN Config

	VLAN ID	<input type="text" value="2"/>
	VLAN Name	<input type="text" value="VLAN0002"/>

Port	Default VLAN	Mode	Untag or not	Allow or not
G0/1	1 <1-4094>	Access	No	Yes
G0/2	1 <1-4094>	Access	No	Yes
G0/3	1 <1-4094>	Access	No	Yes
G0/4	1 <1-4094>	Access	No	Yes
G0/5	1 <1-4094>	Access	No	Yes
G0/6	1 <1-4094>	Access	No	Yes
G0/7	1 <1-4094>	Access	No	Yes
G0/8	1 <1-4094>	Access	No	Yes
G0/9	1 <1-4094>	Access	No	Yes
G0/10	1 <1-4094>	Access	No	Yes
G0/11	1 <1-4094>	Access	No	Yes
G0/12	1 <1-4094>	Access	No	Yes

Figure 3 Revising VLAN configuration

If you want to create a new VLAN, enter a VLAN ID and a VLAN name; the VLAN name can be null.

Through the port list, you can set for each port the default VLAN , the VLAN mode (Trunk or Access), whether to allow the entrance of current VLAN packets and whether to execute the untagging of the current VLAN when the port works as the egress port.

- **Note:**
When a port in Trunk mode serves as an egress port, it will untag the default VLAN by default.

4.2 GVRP Configuration

4.2.1 GVRP Global Attribute Configuration

If you click **Layer-2 Config -> GVRP Config -> GVRP Global Config** in the navigation bar, the **GVRP Global Config** page appears, as shown the following Figure.

GVRP Global Config	
GVRP Global Config	Disable ▾
Set Dynamic Vlan to Take Effect Only On Registration Ports	Disable ▾
<input type="button" value="Apply"/> <input type="button" value="Reset"/>	

Figure 9 GVRP Global Configuration

You can enable or disable the global GVRP protocol and sets whether the dynamic vlan is only effective on the registration interface.

4.2.2 Global Interface Attribute Configuration

If you click **Layer-2 Config -> GVRP Config -> GVRP Interface Config** in the navigation bar, the **GVRP Interface Config** page appears, as shown the following Figure.

Port	GVRP Status
G0/1	Enable ▾

Figure 10 Global Interface Attribute Configuration

To enable or disable GVRP protocol on the GVRP interface configuration.

4.3 STP Configuration

4.3.1 STP Status Information

If you click **Layer-2 Config -> STP Config** in the navigation bar, the **STP Config** page appears, as shown in figure 10.

Root STP Config

Spanning Tree Priority	4096
MAC Address	00E0.0F8E.7025
Hello Time	2
Max Age	20
Forward Delay	15

Local STP Config

Protocol Type	RSTP ▼
Spanning Tree Priority	32768 ▼
MAC Address	FCFA.F72E.09A1
Hello Time	<input type="text" value="2"/> (1-10)s
Max Age	<input type="text" value="20"/> (6-40)s
Forward Delay	<input type="text" value="15"/> (4-30)s
BPDU Terminal	Disable ▼

STP Port's State

No.1 Page/Total 1 Page	First Prev Next Last	Go No. <input type="text"/> Page	Search: <input type="text"/>	Current 1 Item/Total 1 Item	
Interface	Role	State	Cost	Priority.Port ID	Type
G0/1	Root	FWD	20000	128.1	P2p

Figure 10 Configuring the global attributes of STP

The root STP configuration information and the STP port's status are only-read.

On the local STP configuration page, you can modify the running STP mode by clicking the Protocol type dropdown box. The STP modes include STP, RSTP and disabled STP.

The priority and the time need be configured for different modes.

- **Note:**
The change of the STP mode may lead to the interruption of the network.

4.3.2 Configuring the Attributes of the STP Port

If you click the "Configure RSTP Port" option, the "Configure RSTP Port" page appears.

Port	Protocol Status	Priority(0~240)	Path-Cost(0~200000000)	Edge Port Property
G0/1	Enable ▼	128 ▼	<input type="text" value="0"/>	Auto ▼
G0/2	Enable ▼	128 ▼	<input type="text" value="0"/>	Auto ▼
G0/3	Enable ▼	128 ▼	<input type="text" value="0"/>	Auto ▼
G0/4	Enable ▼	128 ▼	<input type="text" value="0"/>	Auto ▼
G0/5	Enable ▼	128 ▼	<input type="text" value="0"/>	Auto ▼
G0/6	Enable ▼	128 ▼	<input type="text" value="0"/>	Auto ▼
G0/7	Enable ▼	128 ▼	<input type="text" value="0"/>	Auto ▼
G0/8	Enable ▼	128 ▼	<input type="text" value="0"/>	Auto ▼

Figure 11 Configuring the attributes of RSTP

The configuration of the attributes of the port is irrelative of the global STP mode. For example, if the protocol status is set to “Disable” and the STP mode is also changed, the port will not run the protocol in the new mode.

The default value of the path cost of the port is 0, meaning the path cost is automatically calculated according to the speed of the port. If you want to change the path cost, please enter another value.

4.4 IGMP-Snooping Configuration

4.4.1 IGMP-Snooping Configuration

If you click **Layer-2 Config -> IGMP snooping**, the IGMP-Snooping configuration page appears.

Figure 12 IGMP-snooping configuration

On this page you can set whether to make a switch to forward unknown multicasts, whether to enable IGMP snooping, and whether to configure the switch as the querier of IGMP.

4.4.2 IGMP-Snooping VLAN List

If you click **Layer-2 Config -> IGMP snooping vlan list**, the **IGMP-Snooping VLAN list** page appears.

	VLAN ID	Status of the IGMP Snooping Vlan	Immediate-leave	Multicast Router's Port	Operate
<input type="checkbox"/>	1	Running	Disable	SWITCH(querier);	Edit

Figure 13: IGMP-snooping VLAN list

If you click **New**, IGMP-snooping VLAN configuration can be done. Through Web up to 8 physical ports can be set on each IGMP snooping VLAN. If you click **Cancel**, a selected IGMP-Snooping VLAN can be deleted; if you click **Edit**, you can modify the member port, running status and immediate-leave of IGMP-Snooping VLAN.

VLAN ID		<input type="text" value="2"/>
Status of the IGMP Snooping Vlan		Enable ▾
Immediate-leave		Disable ▾
Configured Mrouter Port List		Available Port List
G0/1 G0/12	>> <<	G0/10 G0/11 G0/13 G0/14 G0/15 G0/16 G0/17 G0/18 G0/19 G0/20
<input type="button" value="Apply"/>		<input type="button" value="Reset"/>
		<input type="button" value="Go Back"/>

Figure 14: Static routing port of IGMP VLAN

When an IGMP-Snooping VLAN is created, its VLAN ID can be modified; but when the IGMP-Snooping VLAN is modified, its VLAN ID cannot be modified.

You can click ">>" and "<<" to delete and add a routing port.

4.4.3 Static Multicast Address

If you click **Static multicast address**, the **Setting the static multicast address** page appears.

Static Multicast Address Config

Help		

Figure 15 Multicast List

On this page, the currently existing static multicast groups and port groups in each static multicast group are shown.

Click "Refresh" to refresh the contents in the list.

4.4.4 Multicast List

Click the **Multicast List Info** option on the top of the page and the **Multicast List Info** page appears.

Figure 16 Multicast List

On this page the multicast groups, which are existent in the current network and are in the statistics of IGMP snooping, as well as port sets which members in each group belong to are displayed.

Click “Refresh” to refresh the contents in the list.

- **Note:**

By default, a multicast list can display up to 15 VLAN items. You can modify the number of multicast items by running **ip http web igmp-groups** after you log on to the device through the Console port or Telnet.

4.5 Setting Static ARP

If you click **Layer-2 Config -> Static ARP Config**, the static ARP configuration page appears.

◆MAC: The mac address only supports the unicast address and the following formats:XXXXXXXXXXXX,XXXX.XXXX.XXXX,XX:XX:XX:XX:XX:XX,XX-XX-XX-XX-XX-XX, and X is Hex number

Figure 17 Displaying static ARP

You can click **New** to add an ARP entry. If the **Alias** column is selected, it means to answer the ARP request of the designated IP address.

If you click Edit, you can modify the current ARP entry.

If you click Cancel, you can cancel the chosen ARP entry.

Help

- ◆ Only one port can be configured for a unicast MAC address, while multiple MAC addresses can be configured for a multicast MAC address
- ◆ MAC format: XXXX.XXXX.XXXX

Figure 19 Static MAC Address Config

4.7 LLDP Configuration

4.7.1 Configuring the Global Attributes of LLDP

If you click **Layer-2 Config -> LLDP Config -> LLDP Global Config** in the navigation bar, the **Basic Config of LLDP Protocol** page appears, as shown in the following Figure.

Basic Config of LLDP Protocol

Protocol State	<input type="text" value="Open the LLDP protocol"/>	
HoldTime Settings	<input type="text" value="120"/>	(0-65535)s
Reinit Settings	<input type="text" value="2"/>	(2-5)s
Setting the packet transmission cycle	<input type="text" value="30"/>	(5-65534)s

Help

- ◆ HoldTime: Means the TTL(Time to live) of sending LLDP packets. Its default value is 120s.
- ◆ Reinit: Means the delay of continuously sending LLDP packets. Its default value is 2s.

Figure11 Configuring the Global Attributes of LLDP

You can choose to enable LLDP or disable it. When you choose to disable LLDP, you cannot configure LLDP.

The "HoldTime" parameter means the ttl value of the packet that is transmitted by LLDP. Its default value is 120s.

The "Reinit" parameter means the delay of successive packet transmission of LLDP. Its default value is 2s.

4.7.2 LLDP Port Attribute Configuration

If you click **Layer-2 Config -> LLDP Config -> LLDP Interface Config** in the navigation bar, the **LLDP Port Config** page appears.

Port	Receive LLDP Packet	Send LLDP Packet
G0/1	Enable ▼	Enable ▼

Figure 12 Configuring the LLDP port

After the LLDP port is configured, you can enable or disable LLDP on this port.

4.8 DDM Configuration

If you click **L2 Config -> DDM Config** in the navigation bar, the **DDM configuration** page appears, as shown in figure 5-21.

Figure 5-21: DDM configuration

4.9 Link Aggregation Configuration

4.9.1 Port Aggregation Configuration

If you click **Advanced Config -> Link aggregation Config** in the navigation bar, the **Link aggregation Config** page appears, as shown in figure 22.

If you click **New**, an aggregation group can be created. Up to 32 aggregation groups can be configured through Web and up to 8 physical ports in each group can be aggregated. If you click **Cancel**, you can delete a selected aggregation group; if you click **Modify**, you can modify the member port and the aggregation mode.

Help

#Note: Each aggregation port can be configured to have at most 8 physical port.

An aggregation group is selectable when it is created but is not selectable when it is modified.

When a member port exists on the aggregation port, you can choose the aggregation mode to be Static, LACP Active or LACP Passive.

You can click >> and << to delete and add a member port in the aggregation group.

4.9.2 Configuring Load Balance of Port Aggregation Group

Some models support aggregation group based load balance mode configuration and some not but can be configured in the global configuration mode.

Configuring Load Balance of Port Aggregation Group

Port Channel	Loading Balance Mode
p1	SRC MAC
p2	BOTH MAC

Help

The user can adopt varied aggregation modes for different aggregation groups.

4.10 EAPS Ring Protection Configuration

4.10.1 EAPS Ring List

If you click Layer-2 Config -> Ring Protection ->EAPS Config, the EAPS Ring Config page appears.

ether-ring											
<input type="button" value="New"/>											
No.1 Page/Total 1 Page First Prev Next Last Go No. <input type="text"/> Page Search: <input type="text"/>										Current 1 Item/Total 1 Item	
Ring ID	Node Type	Ring Description	Control VLAN	Status	Hello Fail	Preforward	Primary Port/Forwarding/Link Status	Secondary Port/Forwarding/Link Status	Operate		
<input type="checkbox"/>	1	Master-node	3	RingFail	1	3	3	None/Blocking/Linkdown	None/Blocking/Linkdown	Edit	

In the list shows the currently configured EAPS ring, including the status of the ring, the forwarding status of the port and the status of the link.

Click "New" to create a new EAPS ring.

Click the “Operate” option to configure the “Time” parameter of the ring.

- Note:
- 1. The system can support 8 EAPS rings.
- 2. After a ring is configured, its port, node type and control VLAN cannot be modified. If the port of the ring, the node type or the control VLAN need be adjusted, please delete the ring and then establish a new one.

4.10.2 EAPS Ring Configuration

If you click “New” on the EAPS ring list, or “Operate” on the right side of a ring item, the “Configure EAPS” page appears.

ether ring	
Ring ID	0 ▾
Node Type	Master Node ▾
Ring Description	<input type="text"/>
Control VLAN	<input type="text"/>

Secondary Port	None ▾

Help
 #Ring Description: You can't input 'Enter'.

- Note:
- If you want to modify a ring, on this page the node type, the control VLAN, the primary port and the secondary port cannot be modified.

In the dropdown box on the right of “Ring ID”, select an ID as a ring ID. The ring IDs of all devices on the same ring must be the same.

The dropdown box on the right of “Node Type” is used to select the type of the node. Please note that only one master node can be configured on a ring.

Enter a value between 1 and 4094 in the text box on the right of “Control VLAN” as the control VLAN ID. When a ring is established, the control VLAN will be automatically established too. Please note that if the designated control VLAN is 1 and the VLAN of the control device is also 1 the control device cannot access the control VLAN. Additionally, please do not enter a control VLAN ID that is same as that of another ring.

In the text boxes of “Primary Port” and “Secondary Port”, select a port as the ring port respectively. If “Node Type” is selected as “Transit-Node”, the two ports will be automatically set to transit ports.

Click “Apply” to finish EAPS ring configuration, click “Reset” to resume the initial values of the configuration, or click “Return” to go back to the EAPS list page.

4.11 MEAPS Configuration

4.11.1 MEAPS Ring Configuration

If you click Layer-2 Config -> Multiple Ring Protection -> Multiple Ring Protection on the navigation bar, the Multiple Ring Protection Configuration page appears.

Multiple Ring Protection Configuration													
New

<input type="button" value="Apply"/> <input type="button" value="Reset"/> <input type="button" value="Go Back"/>	
Help	
#Share Load VLAN can be Only Configured On The Backup Port	

The backup link group which has configured the primary port cannot take other ports as its primary port. Likewise, the backup link group which has configured the backup port cannot take other ports as its backup port.

4.13 DHCP Snooping Configuration

4.13.1 DHCP Snooping Global Attribute Configuration

If you click Layer-2 Config -> DHCP Snooping Config -> DHCP Snooping Global Config on the navigation bar, the DHCP Snooping Global Config page appears.

DHCP Snooping Global Config	
DHCP Snooping Global Config	Disable <input type="text"/>
TFTP Server IP To Save the Port Binding Relationship	<input type="text"/>
TFTP File Name To Save the Port Binding Relationship	iii <input type="text"/>
Update Interval To Save the Port Binding Relationship	30 <input type="text"/>
<input type="button" value="Apply"/> <input type="button" value="Reset"/>	

Enable global DHCP Snooping protocol, the switch is to monitor all DHCP packets and form the corresponding binding relationship. If the client obtains the address of a switch before the global DHCP Snooping protocol is enabled, the switch cannot add the corresponding binding relationship.

After the switch configuration is rebooted, the previously-configured interface binding will be lost. In this case, there is no binding relationship on this interface. After source IP address monitoring is enabled, the switch rejected forwarding all IP packets. After the TFTP server is configured for interface binding backup, the binding relationship will be backed up to the server through the TFTP protocol. After the switch is restarted, the switch automatically downloads the binding list from the TFTP server, securing the normal running of the network.

When backing up the interface binding relationship, the corresponding file name will be

saved on the TFTP server. In this way, different switches can back up their own interface binding relationships to the same TFTP server.

The MAC-to-IP binding relationship on an interface changes dynamically. Hence, you need check whether the binding relationship updates after a certain interval. If the binding relationship updates, it need be backed up again. The default time interval is 30mins.

4.13.2 DHCP Snooping VLAN Attribute Configuration

If you click Layer-2 Config -> DHCP Snooping Config -> DHCP Snooping VLAN Config on the navigation bar, the DHCP Snooping VLAN Config page appears.

DHCP Snooping VLAN Config	
Enable DHCP Snooping VLAN	<input type="text" value="2-3,6"/>
Enable Dynamic ARP Inspection VLAN	<input type="text" value="3"/>
Enable Verify Source VLAN	<input type="text"/>
<input type="button" value="Apply"/> <input type="button" value="Reset"/>	

If DHCP snooping is enabled in a VLAN, the DHCP packets which are received from all distrusted physical ports in a VLAN will be legally checked. The DHCP response packets which are received from distrusted physical ports in a VLAN will then be dropped, preventing the faked or mis-configured DHCP server from providing address distribution services. For the DHCP request packet from distrusted ports, if the hardware address field in the DHCP request packet does not match the MAC address of this packet, the DHCP request packet is then thought as a fake packet which is used as the attack packet for DHCP DOS and then the switch will drop it.

When dynamic ARP monitoring is conducted in all physical ports of a VLAN, a received ARP packet will be rejected if the source MAC address and the source IP address of this packet do not match up with the configured MAC-IP binding relationship. The binding relationship on an interface can be dynamically bound by DHCP or configured manually. If no MAC addresses are bound to IP addresses on a physical interface, the switch rejects forwarding all ARP packets.

After source IP address monitoring is enabled in a VLAN, IP packets received from all physical ports in the VLAN will be rejected if their source MAC addresses and source IP addresses do not match up with the configured MAC-to-IP binding relationship. The binding relationship on an interface can be dynamically bound by DHCP or configured manually. If no MAC addresses are bound to IP addresses on a physical interface, the switch rejects forwarding all IP packets received from the physical interface.

4.13.3 DHCP Snooping Interface Attribute Configuration

If you click Layer-2 Config -> DHCP Snooping Config -> DHCP Snooping Interface Config on the navigation bar, the DHCP Snooping Interface Config page appears.

Port	DHCP Trust Port	ARP Inspection Trust Port	IP Source Trust Port
g0/1	<input type="text" value="Distrust"/>	<input type="text" value="Distrust"/>	<input type="text" value="Distrust"/>

If an interface is set to be a DHCP-trusting interface, the DHCP packets received from this interface will not be checked.

ARP monitoring is not enabled on those trusted interfaces. The interfaces are distrusted ones by default.

The source address detection function will not be enabled for the IP source address trust interface.

4.13.4 DHCP Snooping Manual Binding Configuration

If you click Layer-2 Config -> DHCP Snooping Config -> DHCP Interface Binding List Manual Config on the navigation bar, the DHCP Manual Port List page appears.

DHCP Manual Binding Port List

<input type="checkbox"/> Select All/Select None				<input type="button" value="Delete"/>
Help				
#Manual binding list is prior to the dynamic binding list, and the mac address is the only index of the binding item.				

If a host does not obtain the address through DHCP, you can add the binding item on an interface of a switch to enable the host to access the network. You can run no ip source binding MAC IP to delete items from the corresponding binding list.

Note that the manually-configured binding items have higher priority than the dynamically-configured binding items. If the manually-configured binding item and the dynamically-configured binding item have the same MAC address, the manually-configured one updates the dynamically-configured one. The interface binding item takes the MAC address as the unique index. The interface binding item takes the MAC address as the unique index.

Click New to create DHCP Snooping manual Binding Port Item.

#Configure the size of the system mtu, whose default value is 1500	

You can set the size of the maximum transmission unit (MTU).

4.15 PDP Configuration

4.15.1 Configuring the Global Attributes of PDP

If you click Layer-2 Config -> PDP Config in the navigation bar, the Global PDP Config page appears, as shown in figure 4.

Basic Config of PDP Protocol	
Protocol State	<input type="button" value="Close the PDP protocol"/> ▾
HoldTime Settings	<input type="text" value="180"/> (10-255)s
Setting the packet transmission cycle	<input type="text" value="60"/> (5-254)s
Protocol Version	<input type="button" value="Version2"/> ▾
<input type="button" value="Apply"/> <input type="button" value="Reset"/>	
Help	
#HoldTime:If the other PDP packets are not received, the switch will save the holdtime before clearing the received packets.Its default value is 180s. #Cycle of Sending Packets:Its default value is 60s.	

You can choose to enable PDP or disable it. When you choose to disable PDP, you cannot configure PDP.

The “HoldTime” parameter means the time to be saved before the router discards the received information if other PDP packets are not received.

4.15.2 Configuring the Attributes of the PDP Port

If you click Layer-2 Config -> PDP Config-> PDP port Config in the navigation bar, the Setting the attributes of the PDP port page appears, as shown in figure 5.

Port	Status
g0/1	<input type="button" value="Enable PDP"/> ▾

After the PDP port is configured, you can enable or disable PDP on this port.

4.16 STP Configuration

4.16.1 STP Status Information

If you click **Layer-2 Config -> STP Config** in the navigation bar, the **STP Config** page appears, as shown in figure 10.

Root STP Config	
Spanning Tree Priority	4096
MAC Address	00E0.0F8E.7025
Hello Time	2
Max Age	20
Forward Delay	15

Local STP Config	
Protocol Type	RSTP <input type="button" value="v"/>
Spanning Tree Priority	32768 <input type="button" value="v"/>
MAC Address	FCFA.F72E.09A1
Hello Time	<input type="text" value="2"/> (1-10)s
Max Age	<input type="text" value="20"/> (6-40)s
Forward Delay	<input type="text" value="15"/> (4-30)s
BPDU Terminal	Disable <input type="button" value="v"/>

STP Port's State

Interface	Role	State	Cost	Priority	Port ID	Type				
G0/1	Root	FWD	20000		128.1	P2p				

Figure 10 Configuring the global attributes of STP

The root STP configuration information and the STP port's status are only-read.

On the local STP configuration page, you can modify the running STP mode by clicking the Protocol type dropdown box. The STP modes include STP, RSTP and disabled STP.

The priority and the time need be configured for different modes.

- **Note:**
The change of the STP mode may lead to the interruption of the network.

4.16.2 Configuring the Attributes of the STP Port

If you click the "Configure RSTP Port" option, the "Configure RSTP Port" page appears.

Port	Protocol Status	Priority(0~240)	Path-Cost(0~200000000)	Edge Port Property
G0/1	Enable <input type="button" value="v"/>	128 <input type="button" value="v"/>	<input type="text" value="0"/>	Auto <input type="button" value="v"/>
G0/2	Enable <input type="button" value="v"/>	128 <input type="button" value="v"/>	<input type="text" value="0"/>	Auto <input type="button" value="v"/>
G0/3	Enable <input type="button" value="v"/>	128 <input type="button" value="v"/>	<input type="text" value="0"/>	Auto <input type="button" value="v"/>
G0/4	Enable <input type="button" value="v"/>	128 <input type="button" value="v"/>	<input type="text" value="0"/>	Auto <input type="button" value="v"/>
G0/5	Enable <input type="button" value="v"/>	128 <input type="button" value="v"/>	<input type="text" value="0"/>	Auto <input type="button" value="v"/>
G0/6	Enable <input type="button" value="v"/>	128 <input type="button" value="v"/>	<input type="text" value="0"/>	Auto <input type="button" value="v"/>
G0/7	Enable <input type="button" value="v"/>	128 <input type="button" value="v"/>	<input type="text" value="0"/>	Auto <input type="button" value="v"/>
G0/8	Enable <input type="button" value="v"/>	128 <input type="button" value="v"/>	<input type="text" value="0"/>	Auto <input type="button" value="v"/>

Figure 11 Configuring the attributes of RSTP

The configuration of the attributes of the port is irrelative of the global STP mode. For example, if the protocol status is set to "Disable" and the STP mode is also changed, the port will not run the protocol in the new mode.

The default value of the path cost of the port is 0, meaning the path cost is automatically calculated according to the speed of the port. If you want to change the path cost, please enter another value.

4.17 IGMP-Snooping Configuration

4.17.1 IGMP-Snooping Configuration

If you click **Layer-2 Config -> IGMP snooping**, the IGMP-Snooping configuration page appears.

IGMP Snooping Config

4.19 Ring Protection Configuration

4.19.1 EAPS Ring List

If you click **Layer-2 Config -> Ring protection Config**, the **EAPS ring list** page appears.

Ring ID	Node Type	Ring Description	Control VLAN	Status	Hello	Fail	Preforward	Primary Port/Forwarding/Link Status	Secondary Port/Forwarding/Link Status
<input type="checkbox"/> Select All/Select None <input type="button" value="Delete"/> <input type="button" value="Refresh"/> 									

Figure 19 EAPS Ring List

In the list shows the currently configured EAPS ring, including the status of the ring, the forwarding status of the port and the status of the link.

Click “New” to create a new EAPS ring.

Click the “Operate” option to configure the “Time” parameter of the ring.

-
- Note:
 - 1. The system can support 8 EAPS rings.
 - 2. After a ring is configured, its port, node type and control Vlan cannot be modified. If the port of the ring, the node type or the control Vlan need be adjusted, please delete the ring and then establish a new one.
-

4.19.2 EAPS Ring Configuration

If you click “New” on the EAPS ring list, or “Operate” on the right side of a ring item, the “Configure EAPS” page appears.

ether-ring	
Ring ID	0
Node Type	Master Node
Ring Description	
Control VLAN	
Hello Time	1 (1-10)s
Fail Time	3 (3-30)s
Preforward Time	3 (3-30)s
Primary Port	None
Secondary Port	None

Figure 20 EAPS ring configuration

● **Note:**

If you want to modify a ring, on this page the node type, the control VLAN, the primary port and the secondary port cannot be modified.

In the dropdown box on the right of “Ring ID”, select an ID as a ring ID. The ring IDs of all devices on the same ring must be the same.

The dropdown box on the right of “Node Type” is used to select the type of the node. Please note that only one master node can be configured on a ring.

Enter a value between 1 and 4094 in the text box on the right of “Control VLAN” as the control VLAN ID. When a ring is established, the control VLAN will be automatically established too. Please note that if the designated control VLAN is 1 and the VLAN of the control device is also 1 the control device cannot access the control VLAN. Additionally, please do not enter a control VLAN ID that is same as that of another ring.

In the text boxes of “Primary Port” and “Secondary Port”, select a port as the ring port respectively. If “Node Type” is selected as “Transit-Node”, the two ports will be automatically set to transit ports.

Click “Apply” to finish EAPS ring configuration, click “Reset” to resume the initial values of the configuration, or click “Return” to go back to the EAPS list page.

4.20 EVC Configuration

4.20.1 Global QinQ Configuration

If you click **Layer-2 Config -> EVC Config**, the **Global QinQ configuration** page appears.

Figure 14: Setting the Rules of the extended IP access control list

6.3.3 Applying the IP Access Control List

If you click **Advanced Config -> IP access control list -> Applying the IP access control list**, the **Applying the IP access control list** page appears.

Port	Egress ACL	Ingress ACL
G0/1	myacl	
G0/2		acla
G0/3		
G0/4		
G0/5		
G0/6		
G0/7		
G0/8		

Figure 15: Applying the IP access control list

7 Network Management Configuration

Figure 1: Network management configuration list

7.1 SNMP Configuration

If you click **Network management Config -> SNMP management** in the navigation bar, the **SNMP management** page appears, as shown in figure 2.

7.1.1 SNMP Community Management

The screenshot shows the 'SNMP Community Mgr' tab selected. Below it is the 'SNMP Community Management' header with a 'New' button. A table lists the community details:

No.	SNMP Community Name	SNMP Community Encryption	SNMP Community Attribute	Operate
1	public	False	RO	Edit

Below the table is a 'Select All/Select None' checkbox and a 'Delete' button. The status bar at the top right indicates 'Current 1 Item/Total 1 Item'.

Figure 2 SNMP community management

On the SNMP community management page, you can know the related configuration information about SNMP community.

You can create, modify or cancel the SNMP community information, and if you click **New** or **Edit**, you can switch to the configuration page of SNMP community.

The screenshot shows the configuration form for an SNMP community. It includes the following fields:

- SNMP Community Name:** A text input field containing 'public' with a note 'Input less than 20 characters'.
- SNMP Community Attribute:** A dropdown menu currently set to 'Read Only'.

At the bottom of the form are two buttons: 'Apply' and 'Go Back'.

Figure 4.2 SNMP community management settings

On the SNMP community management page you can enter the SNMP community name, select the attributes of SNMP community, which include Read only and Read-Write.

7.1.2 SNMP Host Management

The screenshot shows the 'SNMP Host Management' header with a 'New' button. A table lists the host details:

No.	SNMP Host IP	SNMP Community String	SNMP Message Type	SNMP Community Version	Operate
1	10.16.1.1	public	Traps	v1	Edit

Below the table is a 'Select All/Select None' checkbox and a 'Delete' button. The status bar at the top right indicates 'Current 1 Item/Total 1 Item'.

Figure 4 SNMP host management

On the SNMP community host page, you can know the related configuration information about SNMP host.

You can create, modify or cancel the SNMP host information, and if you click **New** or **Edit**, you can switch to the configuration page of SNMP host.

The image shows a web interface for 'SNMP Host Management'. It contains four input fields: 'SNMP Host IP', 'SNMP Community', 'SNMP Message Type' (set to 'Traps'), and 'SNMP Community Version' (set to 'v1'). A note next to the message type dropdown states '* Informs is not supported in version v1'. Below the fields are 'Apply' and 'Go Back' buttons.

Figure 5 SNMP host management settings

On the SNMP host configuration page, you can enter **SNMP Host IP**, **SNMP Community**, **SNMP Message Type** and **SNMP Community Version**. **SNMP Message Type** includes **Traps** and **Informs**, and as to version 1, **SNMP Message Type** does not support **Informs**.

7.2 RMON

7.2.1 RMON Statistic Information Configuration

If you click **Network Management Config -> RMON -> RMON Statistics -> New**, the **RMON Statistics** page appears.

The image shows a web interface for 'Interface Statistics Config'. It contains three input fields: 'Interface' (set to 'G0/1'), 'Index' (set to '1'), and 'Owner' (set to 'demon'). A note next to the index field states '(1-65535)'. Below the fields are 'Apply' and 'Go Back' buttons. A 'Help' section at the bottom contains two notes: '◆ It must be configured in interface mode, which is used to enable the interface statistics' and '◆ The string you totally entered is less than or equal to 255 characters'.

Figure 6 Configuring the RMON statistic information

You need to set a physical port to be the reception terminal of the monitor data.

The index is used to identify a specific interface; if the index is same to that of the previous application interface, it will replace that of the previous application interface.

At present, the monitor statistic information can be obtained through the command line "show rmon statistics", but the Web does not support this function.

7.2.2 RMON History Information Configuration

If you click **Network Management Config -> RMON -> RMON history -> New**, the **RMON history** page appears.

Interface History config		
Interface	G0/1	
Index		(1-65535)
Sampling Number	50	(1-65535)
Sampling Interval	1800	(1-3600)
Owner	config	Enter less than 31 characters*

Help	
◆	Sampling Number means how many history items must be saved recently

Figure 7 Configuring the RMON history information

You need to set a physical port to be the reception terminal of the monitor data.

The index is used to identify a specific interface; if the index is same to that of the previous application interface, it will replace that of the previous application interface.

The sampling number means the items that need be reserved, whose default value is 50.

The sampling interval means the time between two data collection, whose default value is 1800s.

At present, the monitor statistic information can be obtained through the command line “show rmon history”, but the Web does not support this function.

7.2.3 RMON Alarm Information Configuration

If you click **Network Management Config** -> **RMON** -> **RMON Alarm** -> **New**, the **RMON Alarm** page appears.

RMON Alarm config		
Index	1	(1-65535)
MIB Node	IfinOctets	
OID	1.3.6.1.2.1.2.2.1.10	
Interface	G0/1	
Alarm type	absolute	
Sampling Interval	5	(1-2147483647)
Rising Threshold	5	(-2147483648 - 2147483647)
Rising Event Index	2	(1-65535)
Falling Threshold	6	(-2147483648 - 2147483647)
Falling Event Index	3	(1-65535)
Owner	default	Enter less than 31 characters*

Help	
◆	The owner can be empty
*◆	The string you totally entered is limited in 255 characters

Figure 8 Configuring the RMON alarm information

The index is used to identify a specific alarm information; if the index is same to the previously applied index, it will replace the previous one.

The MIB node corresponds to OID.

If the alarm type is **absolute**, the value of the MIB object will be directly monitored; if the alarm type is **delta**, the change of the value of the MIB object in two sampling will be monitored.

When the monitored MIB object reaches or exceeds the rising threshold, the event corresponding to the index of the rising event will be triggered.

When the monitored MIB object reaches or exceeds the falling threshold, the event corresponding to the index of the falling event will be triggered.

7.2.4 RMON Event Configuration

If you click **Network Management Config -> RMON -> RMON Event -> New**, the **RMON event** page appears.

RMON Event Config	
Index	<input type="text" value="1-65535"/>
Owner	<input type="text"/>
Description	<input type="text"/>
Enable log	<input type="checkbox"/>
Enable trap	<input type="checkbox"/>
Community	<input type="text"/>

Help

- ◆ If the log is enabled, the items will be added to the log table at the trigger of the event.
- ◆ If the trap is enabled, the trap will be generated with the event community name.
- ◆ The string you totally entered is less than 255 characters

Figure 9 RMON event configuration

The index corresponds to the rising event index and the falling event index that have already been configured on the **RMON alarm config** page.

The owner is used to describe the descriptive information of an event.

"Enable log" means to add an item of information in the log table when the event is triggered.

"Enable trap" means a trap will be generated if the event is triggered.

8 Diagnosis Tools

Figure 1: Diagnosis tool list

8.1 Ping

8.1.1 Ping

If you click **Diagnosis Tools** -> **Ping**, the **Ping** page appears.

Ping

Ping is a typical network tool, which is used to identify the states of some network functions. The states of network functions are the basis of regular network diagnosis. Ping is used to check whether the peer is reachable. If Ping transmits a packet to the host and receives a response from the peer, the peer is reachable.

PING test-->	
Destination address*	<input type="text"/>
Source IP address	<input type="text"/> (An option which can be null)
Size of the PING packet	<input type="text"/> (36-20000) (An option which can be null)

PING

Help

- ◆The ping program can test whether a destination can be reached, or it can test the packet loss to reach a destination.
- ◆Destination address: Enter the to-be-tested destination address.
- ◆Source IP: Source IP.
- ◆Packet's size: Designate the size of a packet when the packet is used to ping a destination. It is optional and cannot be configured.

Figure 2 Ping

Ping is used to test whether the switch connects other devices.

If a Ping test need be conducted, please enter an IP address in the “Destination address” textbox, such as the IP address of your PC, and then click the “PING” button. If the switch connects your entered address, the device can promptly return a test result to you; if not, the device will take a little more time to return the test result.

“Source IP address” is used to set the source IP address which is carried in the Ping packet.

“Size of the PING packet” is used to set the length of the Ping packet which is transmitted by the device.

9.1 User Management

9.1.1 User List

If you click **System Manage -> User Manage**, the **User Management** page appears.

User Management

New

No.1 Page/Total 1 Page First Prev Next Last Go No. Page Search: Current 1 Item/Total 1 Item

	User name	User permission	Pass-Group	Authen-Group	Author-Group	User Status	Operate
<input type="checkbox"/>	admin	System administrator				Normal	Edit

Select All/Select None **Delete**

Help

- ◆Note: When only one Admin user exists, You cannot delete the current administrator user. Otherwise, you cannot log on to the switch and configure it.
- ◆Users can be divided into the Admin user and the limited user according to the permission. The Admin user can use all functions of the switch, including browsing, configuring and remote login, while the limited user only has the permission to browse the switch's running state through the WEB page.
- ◆Click the 'New' button to create a new user.

Figure 2 User list

You can click “New” to create a new user.

To modify the permission or the login password, click “Edit” on the right of the user list.

- Note:
- 1. Please make sure that at least one system administrator exists in the system, so that you can manage the devices through Web.
- 2. The limited user can only browse the status of the device.

9.1.2 Establishing a New User

If you click “New” on the **User Management** page, the **Creating User** page appears.

User Management

User name

Password

Confirming password

Pass-Group

Author-Group

Apply **Reset** **Go Back**

Figure 3 Creating new users

In the “User name” text box, enter a name, which contains letters, numbers and symbols except “?”, “\”, “&”, “#” and the “Space” symbol. \ " & #和空格以外的字符。

In the “Password” textbox enter a login password, and in the “Confirming password” textbox enter this login password again.

In the “User permission” dropdown box set the user's permission. The “System administrator” user can browse the status of the device and conduct relevant settings, while the limited user can only browse the status of the device.

9.2 Log Management

If you click **System Manage -> Log Manage**, the **Log Management** page appears.

Log Management	
System logs will be sent to the server when it is enabled	
Enable the log server	<input checked="" type="checkbox"/>
Address of the log server	192.168.1.77
Level of system logs	(7-debugging)
Enable the log buffer	<input type="checkbox"/>
Size of the log buffer	4096 (Bytes)
Level of cache logs	(7-debugging)
<input type="button" value="Apply"/>	

Figure 4 Log management

If “Enabling the log server” is selected, the device will transmit the log information to the designated server. In this case, you need enter the address of the server in the “Address of the system log server” textbox and select the log's grade in the “Grade of the system log information” dropdown box.

If “Enabling the log buffer” is selected, the device will record the log information to the memory. By logging on to the device through the Console port or Telnet, you can run the command “show log” to browse the logs which are saved on the device. The log information which is saved in the memory will be lost after rebooting. Please enter the size of the buffer area in the “Size of the system log buffer” textbox and select the grade of the cached log in the “Grade of the cache log information” dropdown box.

9.3 Managing the Configuration Files

If you click **System Manage -> Configuration file**, the **Configuration file** page appears.

9.3.1 Exporting the Configuration Information

Export the current startup-config	
Export the current startup-config	
<input type="button" value="Export"/>	

Figure 5 Exporting the configuration file

The current configuration file can be exported, saved in the disk of PC or in the mobile storage device as the backup file.

To export the configuration file, please click the “Export” button and then select the “Save” option in the pop-up download dialog box.

The default name of the configuration file is “startup-config”, but you are suggested to set it to an easily memorable name.

9.3.2 Importing the Configuration Information

Figure 6 Importing the configuration files

You can import the configuration files from PC to the device and replace the configuration file that is currently being used. For example, by importing the backup configuration files, you can resume the device to its configuration of a previous moment.

-
- Note:
 - 1. Please make sure that the imported configuration file has the legal format for the configuration file with illegal format cannot lead to the normal startup of the device.
 - 2. If error occurs during the process of importation, please try it later again, or click the "Save All" button to make the device re-establish the configuration file with the current configuration, avoiding the incomplete file and the abnormality of the device.
 - 3. After the configuration file is imported, if you want to use the imported configuration file immediately, do not click "Save All", but reboot the device directly.
-

9.4 Software Management

If you click **System Manage -> Software Upgrade**, the software management page appears.

9.4.1 Backing up the IOS Software

Figure 7 Backing up IOS

On this page the currently running software version is displayed. If you want to backup IOS, please click "Backing up IOS"; then on the browser the file download dialog box appears; click "Save" to store the IOS file to the disk of the PC, mobile storage device or other network location.

-
- Note:
 - IOS 文件的缺省名称为"Switch.bin", 建议在备份时将其修改为易于识别和查找的名称。
-

9.4.2 Upgrading the IOS Software

- Note:
- 1. Please make sure that your upgraded IOS matches the device type, because the matchable IOS will not lead to the normal startup of the device.
- 2. The upgrade of IOS probably takes one to two minutes; when the “updating” button is clicked, the IOS files will be uploaded to the device.
- 3. If errors occur during upgrade, please do not restart the device or cut off the power of the device, or the device cannot be started. Please try the upgrade again.
- 4. After the upgrade please save the configuration and then restart the device to run the new IOS.

Figure 8 Upgrading the IOS software

The upgraded IOS is always used to solve the already known problems or to perfect a specific function. If you device run normally, do not upgrade your IOS software frequently.

If IOS need be upgraded, please first enter the complete path of the new IOS files in the textbox on the right of “Upgrading IOS”, or click the “Browsing” button and select the new IOS files on your computer, and then click “Updating”.

9.5 Resuming Initial Configuration

If you click **System Manage** -> **Resume Config**, the **Resuming the original configuration** page appears.

Figure 9 Resuming the original configuration

- Note:

- 1. If you click the “Resume” button, the current configuration will be replaced by the original configuration, which will take effect after rebooting.
- 2. Before rebooting the device still works under the current configuration, and if you click “Save All” at the moment, the current configuration will replace the original configuration. The original configuration, therefore, cannot take effect after rebooting.
- 3. After the rebooting is done and the original configuration takes effect, the Web access of the device will be automatically started. The address of Vlan 1 is 192.168.0.1/255.255.255.0, and the username and password are both “admin”.

To resume the original configuration, click “Resume” and then reboot the device.

9.6 Rebooting the Device

If you click **System Manage -> Reboot Device**, the **Rebooting** page appears.

Figure 10 Rebooting the device

If the device need be rebooted, please first make sure that the modified configuration of the device has already been saved, and then click the “Reboot” button.
