

SG-785

The RS-485 pull-high/pull-low and termination resistors module

Features

- Switch selectable pull-high/pull-low resistors
- 15-step switch selectable termination resistor
- LED Indicator for Power/Termination
- DIN-Rail mountable

Introduction

The SG-785 is an optional module that is used to improve the communication of RS-485 network. It provides switch selectable pull-high and pull-low resistors on RS-485 network. It also has 15-step switch selectable termination resistor such that the user can select a proper termination resistor to be connected to the RS-485 network easily.

Applications

RS-485 signal pull-high/pull-low and long distance communication termination resistor setting.
