Regulatory Compliance Statements

This section provides the FCC compliance statement for Class B devices and describes how to keep the system CE compliant.

Declaration of Conformity

FCC

This equipment has been tested and verified to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. Operation of this equipment in a residential area (domestic environment) is likely to cause harmful interference, in which case the user will be required to correct the interference (take adequate measures) at their own expense.

CE

The product(s) described in this manual complies with all applicable European Union (CE) directives if it has a CE marking. For computer systems to remain CE compliant, only CE-compliant parts may be used. Maintaining CE compliance also requires proper cable and cabling techniques.

RoHS Compliance

NEXCOM RoHS Environmental Policy and Status Update

NEXCOM is a global citizen for building the digital infrastructure. We are committed to providing green products and services, which are compliant with European Union RoHS (Restriction on Use of Hazardous Substance in Electronic Equipment) directive 2002/95/EU, to be your trusted green partner and to protect our environment.

RoHS restricts the use of Lead (Pb) < 0.1% or 1,000ppm, Mercury (Hg) < 0.1% or 1,000ppm, Cadmium (Cd) < 0.01% or 100ppm, Hexavalent Chromium (Cr6+) < 0.1% or 1,000ppm, Polybrominated biphenyls (PBB) < 0.1% or 1,000ppm, and Polybrominated diphenyl Ethers (PBDE) < 0.1% or 1,000ppm.

In order to meet the RoHS compliant directives, NEXCOM has established an engineering and manufacturing task force to implement the introduction of green products. The task force will ensure that we follow the standard NEXCOM development procedure and that all the new RoHS components and new manufacturing processes maintain the highest industry quality levels for which NEXCOM are renowned.

The model selection criteria will be based on market demand. Vendors and suppliers will ensure that all designed components will be RoHS compliant.

How to recognize NEXCOM RoHS Products?

For existing products where there are non-RoHS and RoHS versions, the suffix "(LF)" will be added to the compliant product name.

All new product models launched after January 2006 will be RoHS compliant. They will use the usual NEXCOM naming convention.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Warranty and RMA

NEXCOM Warranty Period

NEXCOM manufactures products that are new or equivalent to new in accordance with industry standard. NEXCOM warrants that products will be free from defect in material and workmanship for 2 years, beginning on the date of invoice by NEXCOM. HCP series products (Blade Server) which are manufactured by NEXCOM are covered by a three year warranty period.

NEXCOM Return Merchandise Authorization (RMA)

- Customers shall enclose the "NEXCOM RMA Service Form" with the returned packages.
- Customers must collect all the information about the problems encountered and note anything abnormal or, print out any on-screen messages, and describe the problems on the "NEXCOM RMA Service Form" for the RMA number apply process.
- Customers can send back the faulty products with or without accessories (manuals, cable, etc.) and any components from the card, such as CPU and RAM. If the components were suspected as part of the problems, please note clearly which components are included. Otherwise, NEXCOM is not responsible for the devices/parts.
- Customers are responsible for the safe packaging of defective products, making sure it is durable enough to be resistant against further damage and deterioration during transportation. In case of damages occurred during transportation, the repair is treated as "Out of Warranty."
- Any products returned by NEXCOM to other locations besides the customers' site will bear an extra charge and will be billed to the customer.

Repair Service Charges for Out-of-Warranty Products

NEXCOM will charge for out-of-warranty products in two categories, one is basic diagnostic fee and another is component (product) fee.

Repair Service Charges for Out-of-Warranty Products

NEXCOM will charge for out-of-warranty products in two categories, one is basic diagnostic fee and another is component (product) fee.

System Level

- Component fee: NEXCOM will only charge for main components such as SMD chip, BGA chip, etc. Passive components will be repaired for free, ex: resistor, capacitor.
- Items will be replaced with NEXCOM products if the original one cannot be repaired. Ex: motherboard, power supply, etc.
- Replace with 3rd party products if needed.
- If RMA goods can not be repaired, NEXCOM will return it to the customer without any charge.

Board Level

- Component fee: NEXCOM will only charge for main components, such as SMD chip, BGA chip, etc. Passive components will be repaired for free, ex: resistors, capacitors.
- If RMA goods can not be repaired, NEXCOM will return it to the customer without any charge.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Warnings

Read and adhere to all warnings, cautions, and notices in this guide and the documentation supplied with the chassis, power supply, and accessory modules. If the instructions for the chassis and power supply are inconsistent with these instructions or the instructions for accessory modules, contact the supplier to find out how you can ensure that your computer meets safety and regulatory requirements.

Cautions

Electrostatic discharge (ESD) can damage system components. Do the described procedures only at an ESD workstation. If no such station is available, you can provide some ESD protection by wearing an antistatic wrist strap and attaching it to a metal part of the computer chassis.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Safety Information

Before installing and using the device, note the following precautions:

- Read all instructions carefully.
- Do not place the unit on an unstable surface, cart, or stand.
- Follow all warnings and cautions in this manual.
- When replacing parts, ensure that your service technician uses parts specified by the manufacturer.
- Avoid using the system near water, in direct sunlight, or near a heating device.
- The load of the system unit does not solely rely for support from the rackmounts located on the sides. Firm support from the bottom is highly necessary in order to provide balance stability.
- The computer is provided with a battery-powered real-time clock circuit. There is a danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

Installation Recommendations

Ensure you have a stable, clean working environment. Dust and dirt can get into components and cause a malfunction. Use containers to keep small components separated.

Adequate lighting and proper tools can prevent you from accidentally damaging the internal components. Most of the procedures that follow require only a few simple tools, including the following:

- A Philips screwdriver
- A flat-tipped screwdriver
- A grounding strap
- An anti-static pad

Using your fingers can disconnect most of the connections. It is recommended that you do not use needle-nose pliers to disconnect connections as these can damage the soft metal or plastic parts of the connectors.

Safety Precautions

1. Read these safety instructions carefully.

2. Keep this User Manual for later reference.

3. Disconnect this equipment from any AC outlet before cleaning. Use a damp cloth. Do not use liquid or spray detergents for cleaning.

4. For plug-in equipment, the power outlet socket must be located near the equipment and must be easily accessible.

5. Keep this equipment away from humidity.

6. Put this equipment on a stable surface during installation. Dropping it or letting it fall may cause damage.

7. The openings on the enclosure are for air convection to protect the equipment from overheating. DO NOT COVER THE OPENINGS.

8. Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.

9. Place the power cord in a way so that people will not step on it. Do not place anything on top of the power cord. Use a power cord that has been approved for use with the product and that it matches the voltage and current marked on the product's electrical range label. The voltage and current rating of the cord must be greater than the voltage and current rating marked on the product.

10. All cautions and warnings on the equipment should be noted.

11. If the equipment is not used for a long time, disconnect it from the power source to avoid damage by transient overvoltage.

12. Never pour any liquid into an opening. This may cause fire or electrical shock.

13. Never open the equipment. For safety reasons, the equipment should be opened only by qualified service personnel.

14. If one of the following situations arises, get the equipment checked by service personnel:
    a. The power cord or plug is damaged.
    b. Liquid has penetrated into the equipment.
    c. The equipment has been exposed to moisture.
    d. The equipment does not work well, or you cannot get it to work according to the user's manual.
    e. The equipment has been dropped and damaged.
    f. The equipment has obvious signs of breakage.

15. Do not place heavy objects on the equipment.

16. The unit uses a three-wire ground cable which is equipped with a third pin to ground the unit and prevent electric shock. Do not defeat the purpose of this pin. If your outlet does not support this kind of plug, contact your electrician to replace your obsolete outlet.

17. CAUTION: DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. REPLACE ONLY WITH THE SAME OR EQUIVALENT TYPE RECOMMENDED BY THE MANUFACTURER. DISCARD USED BATTERIES ACCORDING TO THE MANUFACTURER'S INSTRUCTIONS.

Technical Support and Assistance

1. For the most updated information of NEXCOM products, visit NEXCOM's website at www.nexcom.com.

2. For technical issues that require contacting our technical support team or sales representative, please have the following information ready before calling:
   - Product name and serial number
   - Detailed information of the peripheral devices
   - Detailed information of the installed software (operating system, version, application software, etc.)
   - A complete description of the problem
   - The exact wordings of the error messages

Warning!

1. Handling the unit: carry the unit with both hands and handle it with care.

2. Maintenance: to keep the unit clean, use only approved cleaning products or clean with a dry cloth.

3. CompactFlash: Turn off the unit's power before inserting or removing a CompactFlash storage card.

Conventions Used in this Manual

Warning:
Information about certain situations, which if not observed, can cause personal injury. This will prevent injury to yourself when performing a task.

Caution:
Information to avoid damaging components or losing data.

Note:
Provides additional information to complete a task easily.

Ordering Information

The following information below provides ordering information for PEAK 887VL2.

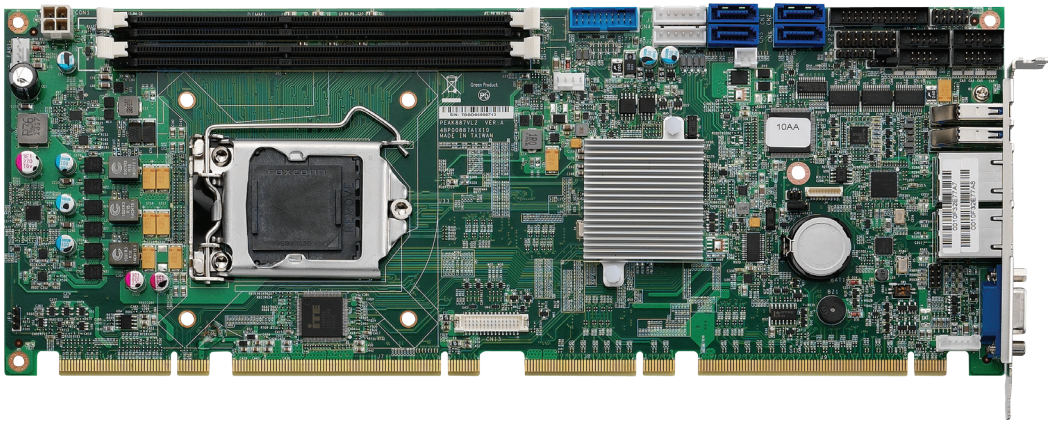
PEAK 887VL2 (P/N: TBD)

PICMG 1.3 Full-size SBC, 4th Generation Intel® Core™ i7/i5/i3 Processors with Max 16GB, DDR3L DIMM, VGA integration, Intel® Gigabit Ethernet x2, USB 3.0 x4, SATA 3.0 x3

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Chapter 1: Product Introduction

Overview



Key Features

- Scalable platform 4th generation Intel® Core™ i7/i5/i3 processor + Non-ECC
- Intel® Q87 PCH chipset support PICMG 1.3 specification
- Support dual channel DDR3L with NON-ECC DIMMs 1333/1600MHz up to 16GB
- Support PCIe x16, 4x PCIe x1, 4x USB 3.0/ 4x USB 2.0, 4x SATA 3.0/ 2x SATA 2.0 and GbE
- Display support for VGA, DVI, HDMI
- Dimension 338.58 x 126.39 mm^2 (W x L) (8 layers single side)

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Hardware Specifications

CPU Support

- 4th generation Intel® Core™ i7/i5/i3 processor (95W/ 65W/ 45W/ 35W) TDPs, Socket LGA 1150

Main Memory

- 2x DIMM, support dual channel DDR3L (default)/ DDR3 NON-ECC DIMM (dual voltage models by auto detection for DDR3 and DDR3L)
- Maximum 16 GB – 1066/1333/1600 MT/S

Platform Control Hub

- Intel® Q87 Express Chipset PCH

BIOS

- AMI System BIOS
- 16MBit SPI depended on AMT function
- Dual BIOS for four PCIe x1 and one PCIe x4 auto-detection

Display

- The Processor Graphics contains a refresh of the seventh generation graphics
- Intel® HD Graphics GT1/GT2
- Share system memory
- Analog Display Support
- Drive a standard progressive scan analog monitor

Audio

- Reverse HDA interface, 2.0mm 2x5 pin header

On-board LAN

- 1x Intel® I217LM GbE PHY
- 1x Intel® I211 Gigabit Ethernet Controller
- RJ45 with LED connecter x 2
- Support Boot From LAN (PXE)
- RJ45 LED
- Support Wake on LAN
- Extra (External) LED: 2 x 4 pin header

I/O Interface

- ITE8783
- PS2 KB/MS reserve 1x6 (2.0m) JST connector
- 26-pin Box Header x 1 (2.0mm)
- SIO Box Header x 4 (2.0mm), COM1, 3, 4 support RS232, COM2 RS232/422/485, RI pin can be select RI/5V/12V with jumper (2x3 pin 2.0mm pin-header)
- 4 Ports USB 2.0 and 4 ports USB 3.0:
  2 ports through 2.5mm JST Connectors, located near Rear Side of PCB (near CPU, USB 3.0)
  4 ports through backplane (USB 2.0)
  2 ports through I/O bracket (USB 3.0)
- 4-pin FAN connector x 2 (for CPU, System)
- On board pin header for IrDA Tx Rx 1x5/2.54mm pin-header
- HDD LED/ Power LED/ Power ON SW/ Reset SW
- On Board buzzer
- USB x1/ USB x1/ LAN1 RJ45 x1/ LAN2 RJ45 x1/ VGA DB15 from top to down

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Power Requirements

- Power source from Backplane through Golden Finger and AUX +12V
- Support ATX/AT function by jumper setting
- BIOS default is (ATX MODE)

Dimensions

- 338.58mm x 126.39mm, 8 layers (single side)

Environment

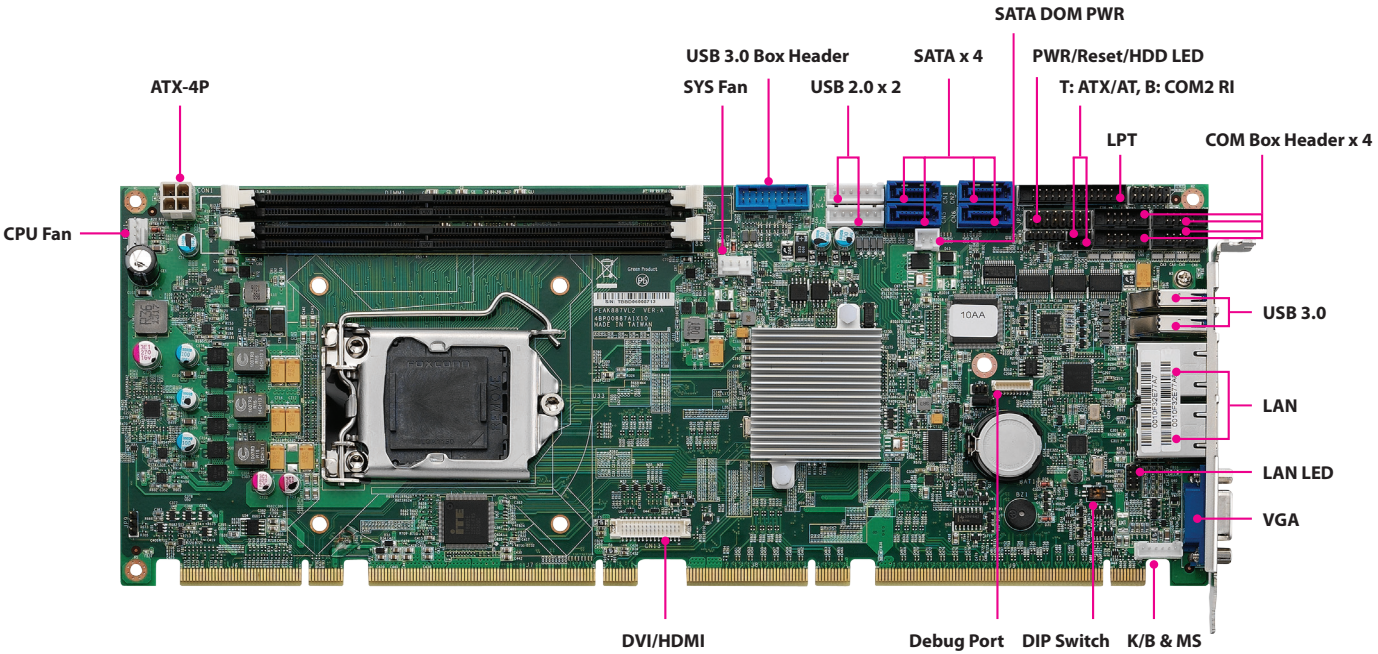
- Board Level Operating temperatures: -15°C to 60°C
- Storage temperatures: -20°C to 85°C
- Relative humidity:
  10% to 90% (operating, non-condensing)
  5% to 95% (non-operating, non-condensing)

Certifications

- CE approval
- FCC Class A
- CB/CCC certification

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Knowing Your PEAK 887VL2



Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Chapter 2: Jumpers and Connectors

This chapter describes how to set the jumpers and connectors on the PEAK 887VL2 motherboard.

Before You Begin

- Ensure you have a stable, clean working environment. Dust and dirt can get into components and cause a malfunction. Use containers to keep small components separated.
- Adequate lighting and proper tools can prevent you from accidentally damaging the internal components. Most of the procedures that follow require only a few simple tools, including the following:
  - A Philips screwdriver
  - A flat-tipped screwdriver
  - A set of jewelers screwdrivers
  - A grounding strap
  - An anti-static pad
- Using your fingers can disconnect most of the connections. It is recommended that you do not use needle-nosed pliers to disconnect connections as these can damage the soft metal or plastic parts of the connectors.
- Before working on internal components, make sure that the power is off. Ground yourself before touching any internal components, by touching a metal object. Static electricity can damage many of the electronic components. Humid environments tend to have less static electricity than dry environments. A grounding strap is warranted whenever danger of static electricity exists.

Precautions

Computer components and electronic circuit boards can be damaged by discharges of static electricity. Working on computers that are still connected to a power supply can be extremely dangerous.

Follow the guidelines below to avoid damage to your computer or yourself:

- Always disconnect the unit from the power outlet whenever you are working inside the case.
- If possible, wear a grounded wrist strap when you are working inside the computer case. Alternatively, discharge any static electricity by touching the bare metal chassis of the unit case, or the bare metal body of any other grounded appliance.
- Hold electronic circuit boards by the edges only. Do not touch the components on the board unless it is necessary to do so. Don't flex or stress the circuit board.
- Leave all components inside the static-proof packaging that they shipped with until they are ready for installation.
- Use correct screws and do not over tighten screws.

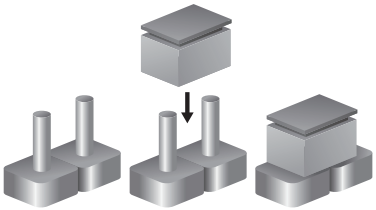
Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Jumper Settings

A jumper is the simplest kind of electric switch. It consists of two metal pins and a cap. When setting the jumpers, ensure that the jumper caps are placed on the correct pins. When the jumper cap is placed on both pins, the jumper is short. If you remove the jumper cap, or place the jumper cap on just one pin, the jumper is open.

Refer to the illustrations below for examples of what the 2-pin and 3-pin jumpers look like when they are short (on) and open (off).

Two-Pin Jumpers: Open (Left) and Short (Right)



Three-Pin Jumpers: Pins 1 and 2 are Short

Chapter 3: BIOS Setup

This chapter describes how to use the BIOS setup program for the PEAK 887VL2. The BIOS screens provided in this chapter are for reference only and may change if the BIOS is updated in the future.

To check for the latest updates and revisions, visit the NEXCOM website at www.nexcom.com.tw.

About BIOS Setup

The BIOS (Basic Input and Output System) Setup program is a menu driven utility that enables you to make changes to the system configuration and tailor your system to suit your individual work needs. It is a ROM-based configuration utility that displays the system's configuration status and provides you with a tool to set system parameters.

These parameters are stored in non-volatile battery-backed-up CMOS RAM that saves this information even when the power is turned off. When the system is turned back on, the system is configured with the values found in CMOS.

With easy-to-use pull down menus, you can configure such items as:

- Hard drives, diskette drives, and peripherals
- Video display type and display options
- Password protection from unauthorized use
- Power management features

The settings made in the setup program affect how the computer performs. It is important, therefore, first to try to understand all the setup options, and second, to make settings appropriate for the way you use the computer.

When to Configure the BIOS

- This program should be executed under the following conditions:
- When changing the system configuration
- When a configuration error is detected by the system and you are prompted to make changes to the setup program
- When resetting the system clock
- When redefining the communication ports to prevent any conflicts
- When making changes to the Power Management configuration
- When changing the password or making other changes to the security setup

Normally, CMOS setup is needed when the system hardware is not consistent with the information contained in the CMOS RAM, whenever the CMOS RAM has lost power, or the system features need to be changed.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Default Configuration

Most of the configuration settings are either predefined according to the Load Optimal Defaults settings which are stored in the BIOS or are automatically detected and configured without requiring any actions. There are a few settings that you may need to change depending on your system configuration.

Entering Setup

When the system is powered on, the BIOS will enter the Power-On Self Test (POST) routines. These routines perform various diagnostic checks; if an error is encountered, the error will be reported in one of two different ways:

- If the error occurs before the display device is initialized, a series of beeps will be transmitted.
- If the error occurs after the display device is initialized, the screen will display the error message.

Powering on the computer and immediately pressing <Del> allows you to enter Setup. Another way to enter Setup is to power on the computer and wait for the following message during the POST:

TO ENTER SETUP BEFORE BOOT PRESS

Press the

key to enter Setup:

Legends

Key	Function
	Moves the highlight left or right to select a menu.
	Moves the highlight up or down between sub-menus or fields.
	Exits the BIOS Setup Utility.
	Scrolls forward through the values or options of the highlighted field.
	Scrolls backward through the values or options of the highlighted field.
	Selects a field.
	Displays General Help.
	Load previous values.
	Load optimized default values.
	Saves and exits the Setup program.
	Press <Enter> to enter the highlighted sub-menu

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Scroll Bar

When a scroll bar appears to the right of the setup screen, it indicates that there are more available fields not shown on the screen. Use the up and down arrow keys to scroll through all the available fields.

Submenu

When "▶" appears on the left of a particular field, it indicates that a submenu which contains additional options are available for that field. To display the submenu, move the highlight to that field and press

.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

BIOS Setup Utility

Once you enter the AMI BIOS Setup Utility, the Main Menu will appear on the screen. The main menu allows you to select from several setup functions and one exit. Use arrow keys to select among the items and press Enter to accept or enter the submenu.

Main

The Main menu is the first screen that you will see when you enter the BIOS Setup Utility.

System Date

The date format is <day>, <month>, <date>, <year>. Day displays a day, from Monday to Sunday. Month displays the month, from January to December. Date displays the date, from 1 to 31. Year displays the year, from 1999 to 2099.

System Time

The time format is <hour>, <minute>, <second>. The time is based on the 24-hour military-time clock. For example, 1 p.m. is 13:00:00. Hour displays hours from 00 to 23. Minute displays minutes from 00 to 59. Second displays seconds from 00 to 59.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Advanced

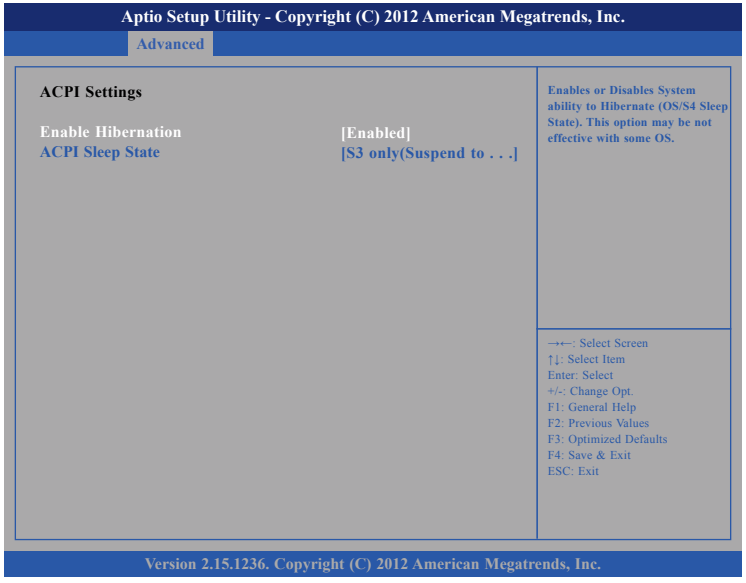
The Advanced menu allows you to configure your system for basic operation. Some entries are defaults required by the system board, while others, if enabled, will improve the performance of your system or let you set some features according to your preference.

Setting incorrect field values may cause the system to malfunction.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

ACPI Settings

This section is used to configure ACPI settings.



Enable Hibernation

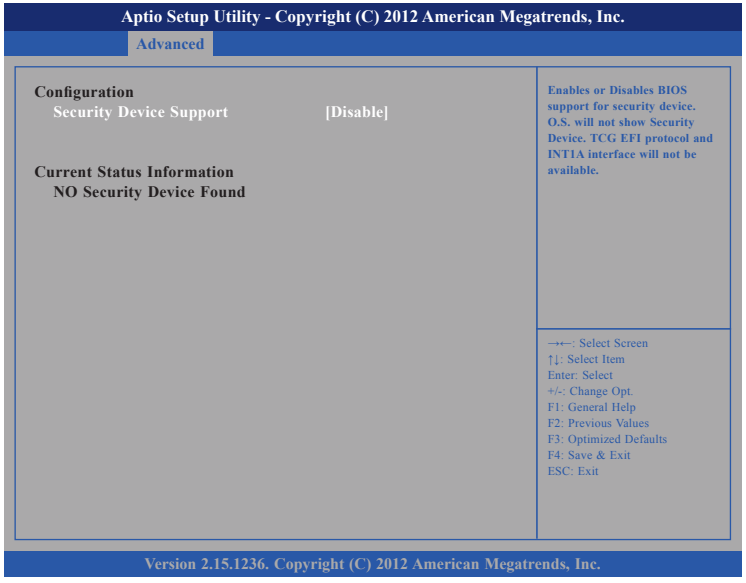
Enables or Disables System ability to Hibernate (OS/S4 Sleep State). This option may be not effective with some OS.

ACPI Sleep State

Select the highest ACPI sleep state the system will enter when the suspend button is pressed. The options are S1 (CPU Stop Clock) and S3 (Suspend to RAM).

Trusted Computing

This section is used to configure Trusted Platform Module (TPM) settings.



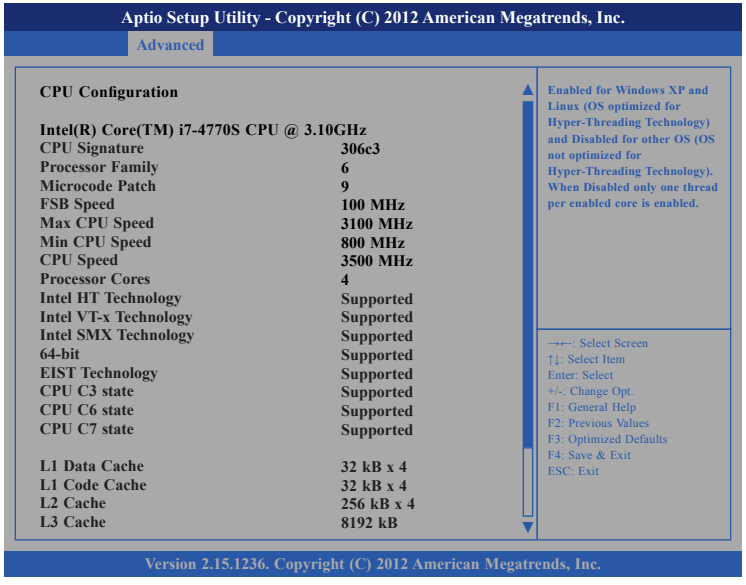
Security Device Support

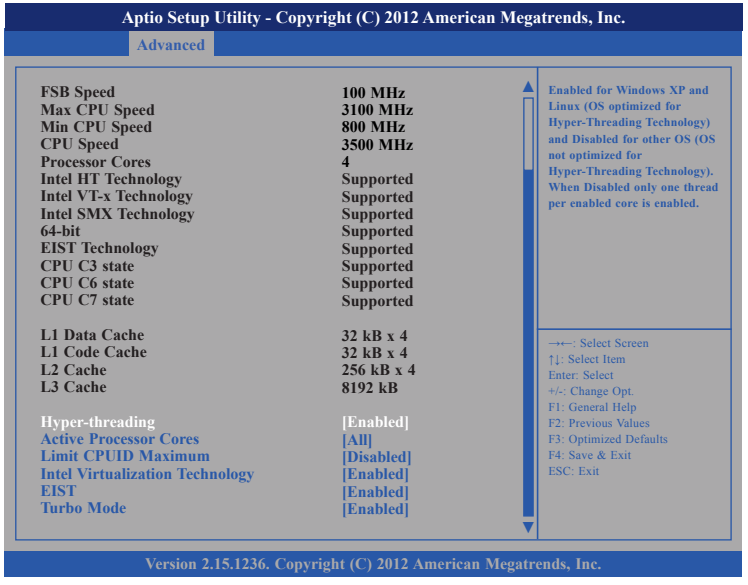
Enables or disables BIOS support for security device. O.S will not show Security Device. TCG EFI protocol and INT1A interface will not be available.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

CPU Configuration

This section is used to configure the CPU.





Hyper-Threading

This field is used to enable or disable hyper-threading.

Active Processor Cores

Select the number of cores to enable in each processor package.

Limit CPUID Maximum

The CPUID instruction of some newer CPUs will return a value greater than 3. The default is Disabled because this problem does not exist in the Windows series operating systems. If you are using an operating system other than Windows, this problem may occur. To avoid this problem, enable this field to limit the return value to 3 or lesser than 3.

Intel® Virtualization Technology

When this field is set to Enabled, the VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.

EIST

Enables or disables Intel® SpeedStep.

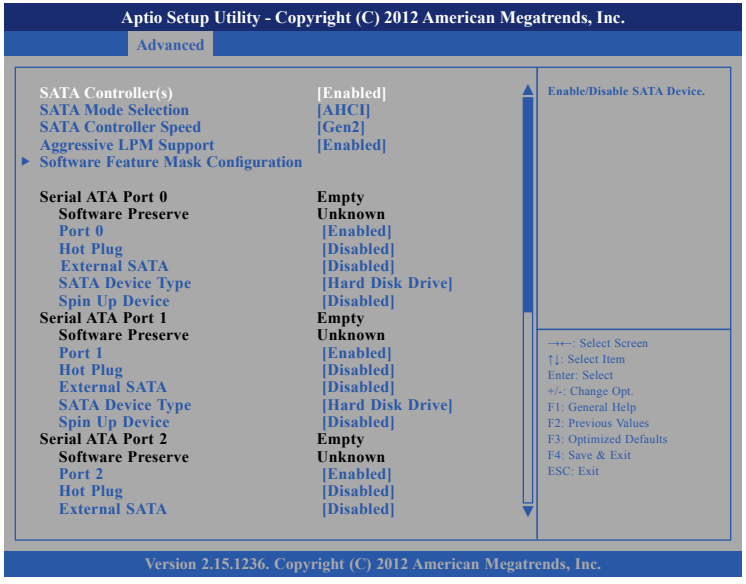
Turbo Mode

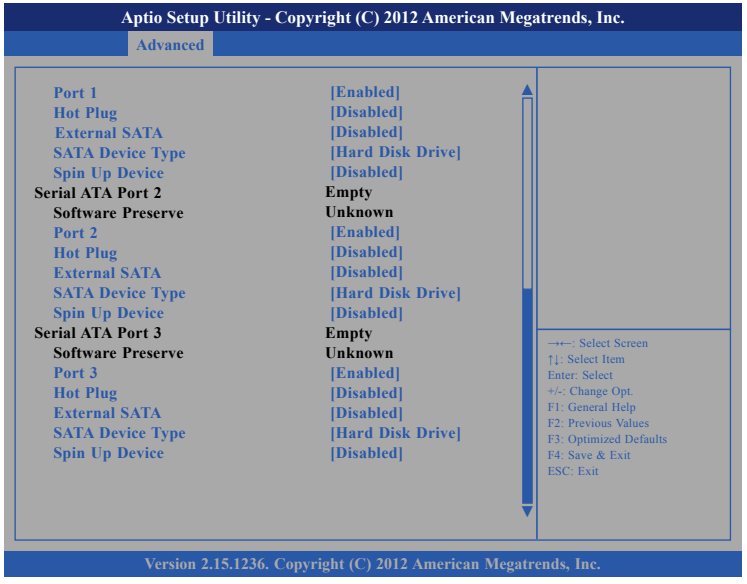
Enables or disables turbo mode.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

SATA Configuration

This section is used to configure the SATA drives.





SATA Controller(s)

Enables or disables the SATA controller.

SATA Mode Selection

Configures the SATA mode.

IDE This option configures the Serial ATA drives as Parallel ATA physical storage device.

AHCI This option configures the Serial ATA drives to use AHCI (Advanced Host Controller Interface). AHCI allows the storage driver to enable the advanced Serial ATA features which will increase storage performance.

SATA Controller Speed

Configures the speed of the SATA controller.

Aggressive LPM Support

Enables or disables aggressive LPM support.

Port 0 to Port 3

Enables or disables SATA port 0 to port 3.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Hot Plug
Enables or disables hot plugging feature on SATA port 0 to port 3.

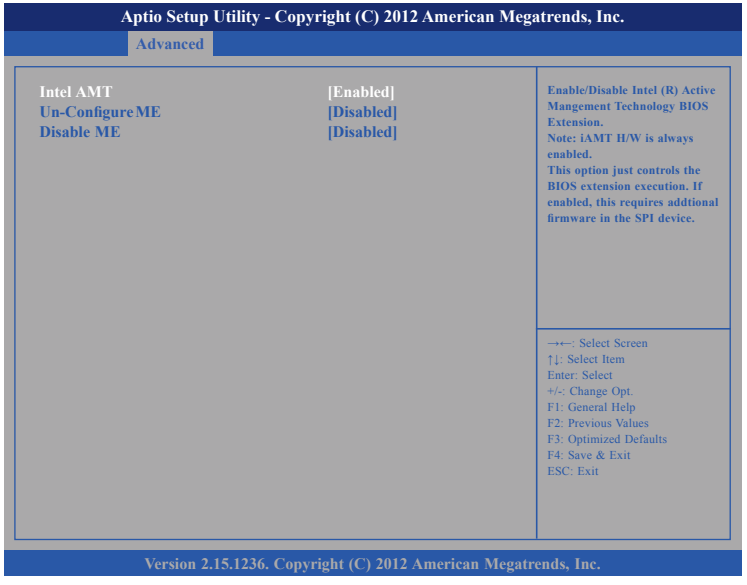
External SATA
Enables or disables the external SATA option on SATA port 0 to port 3.

SATA Device Type
The options are Hard Disk Drive and Solid State Drive.

Spin Up Device
Enables or disables staggered spin up on devices connected to SATA port 0 to port 3.

AMT Configuration

This section is used to configure Active Management Technology (AMT) options.



Intel® AMT
Enables or disables Intel® Active Management Technology.

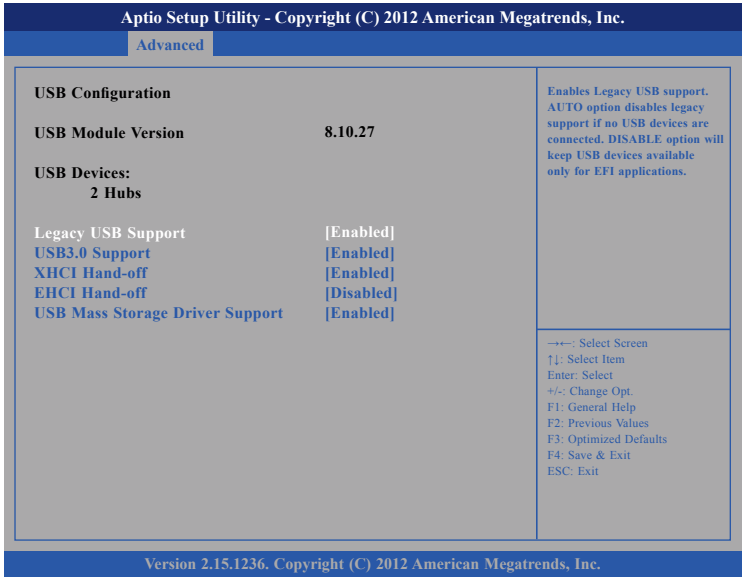
Un-Configure ME
Enables or disables Un-configure ME without password.

Disable ME
Set ME to Soft Temporary Disabled.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

USB Configuration

This section is used to configure the USB.



Legacy USB Support

Enable Enables Legacy USB.
Auto Disables support for Legacy when no USB devices are connected.
Disable Keeps USB devices available only for EFI applications.

USB3.0 Support

Enables or disables USB 3.0 controller support.

XHCI Hand-off

This is a workaround for OSs that does not support XHCI hand-off. The XHCI ownership change should be claimed by the XHCI driver.

EHCI Hand-off

This is a workaround for OSs that does not support EHCI hand-off. The EHCI ownership change should be claimed by the EHCI driver.

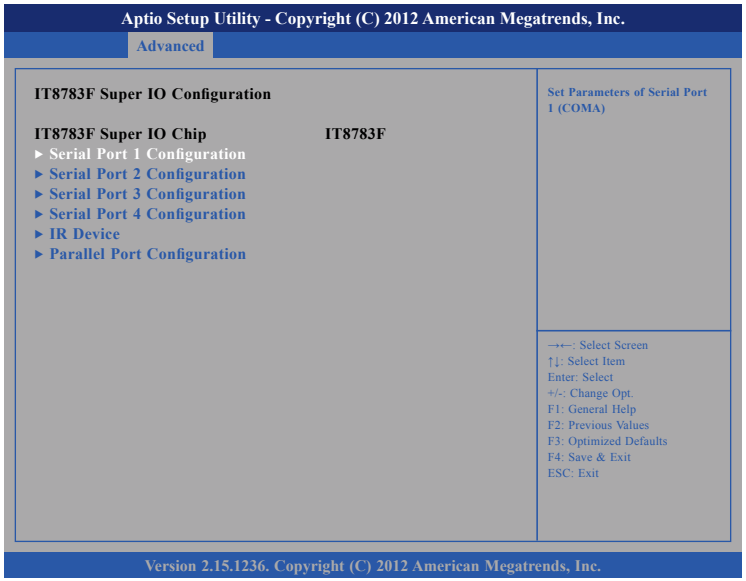
USB Mass Storage Driver Support

Enables or disables USB mass storage driver support.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

IT8783F Super IO Configuration

This section is used to configure the I/O functions supported by the onboard Super I/O chip.



IT8783F Super IO Chip

Displays the Super I/O chip used on the board.

Serial Port 1 Configuration

This section is used to configure serial port 1.

Serial Port

Enables or disables the serial port.

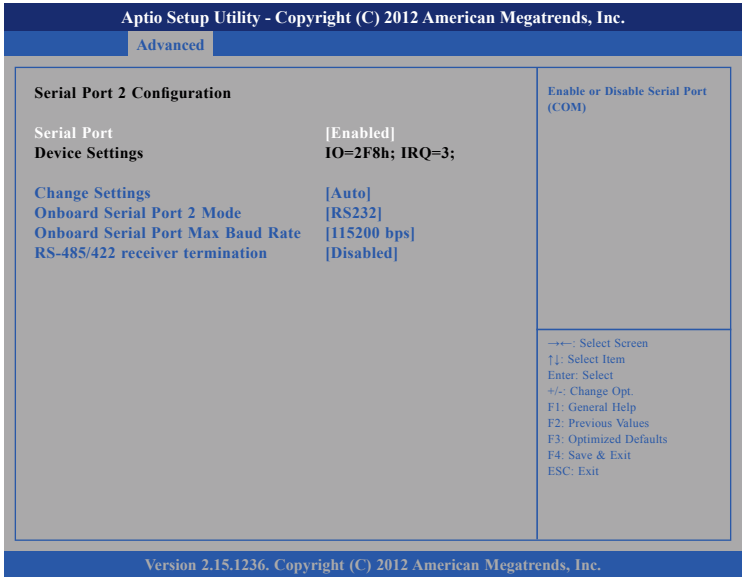
Change Settings

Selects an optimal setting for the Super IO device.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Serial Port 2 Configuration

This section is used to configure serial port 2.



Serial Port

Enables or disables the serial port.

Change Settings

Selects an optimal setting for the Super IO device.

Onboard Serial Port 2 Mode

Select this to change the serial port mode to RS232, RS422 or RS485.

Onboard Serial Port Max Baud Rate

Select this to change the max baud rate of the serial port.

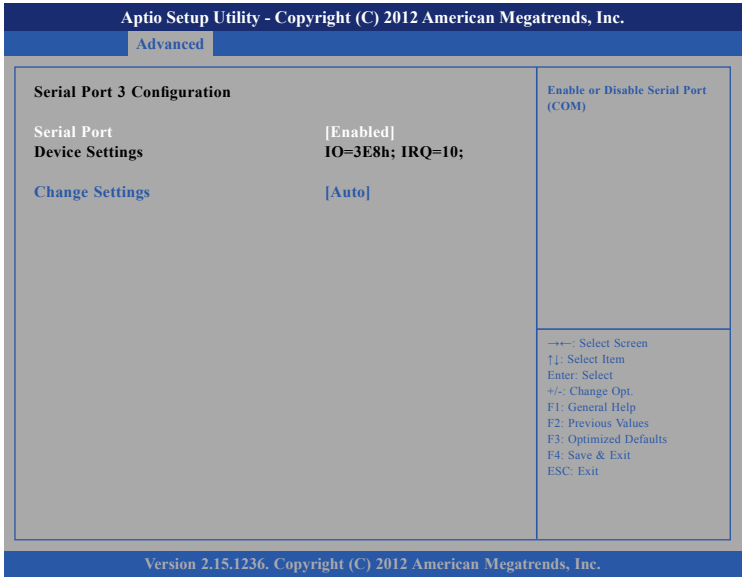
RS-485/422 Receiver Termination

Enables or disables RS-485/422 receiver termination.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Serial Port 3 Configuration

This section is used to configure serial port 3.



Serial Port

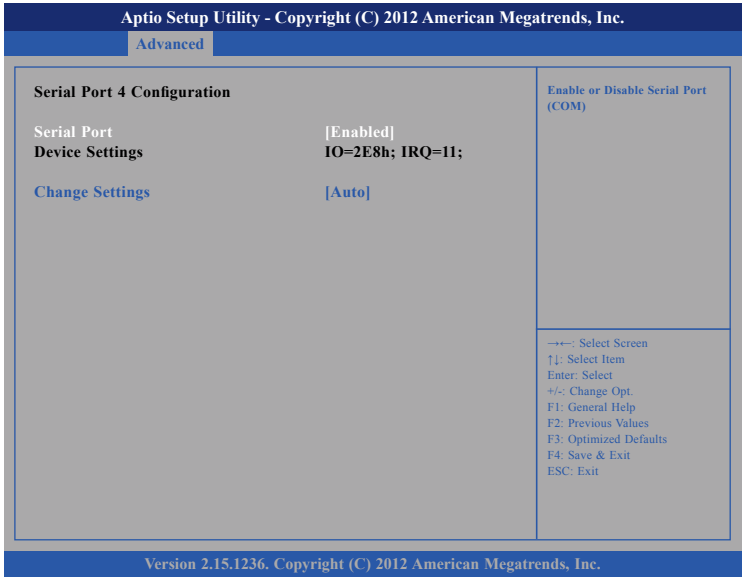
Enables or disables the serial port.

Change Settings

Selects an optimal setting for the Super IO device.

Serial Port 4 Configuration

This section is used to configure serial port 4.



Serial Port

Enables or disables the serial port.

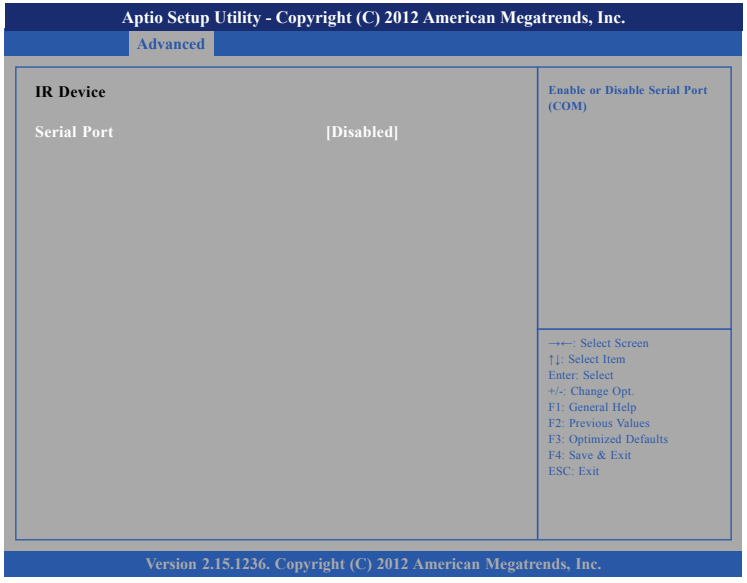
Change Settings

Selects an optimal setting for the Super IO device.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

IR Device

This section is used to configure the IR device.

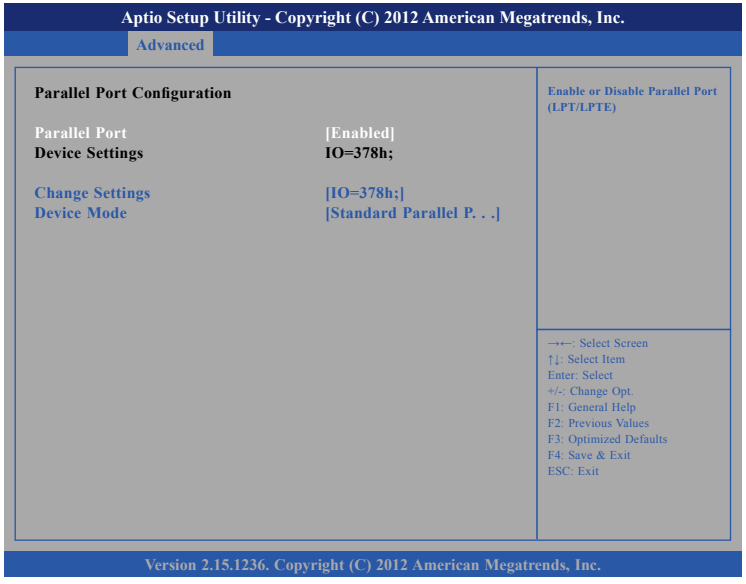


Serial Port

Enables or disables the serial port.

Parallel Port Configuration

This section is used to configure the parallel port.



Parallel Port

Enables or disables the parallel port.

Change Settings

Selects an optimal setting for the Super IO device.

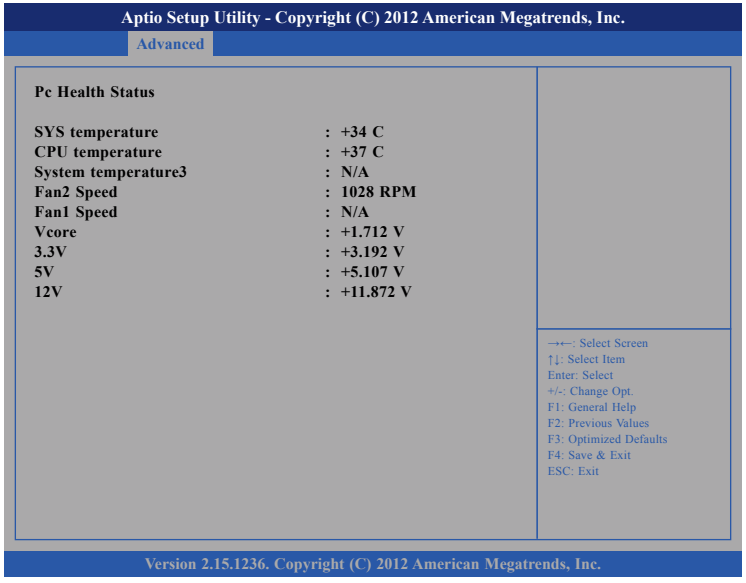
Device Mode

Configures the operating mode of the parallel port. The options are Standard Parallel Port Mode, EPP Mode, ECP Mode, EPP Mode & ECP Mode.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

IT8783F H/W Monitor

This section is used to monitor hardware status such as temperature, fan speed and voltages.



SYS Temperature
Detects and displays the current system temperature.

CPU Temperature
Detects and displays the current CPU temperature.

System Temperature3
Detects and displays the current temperature of system 3.

Fan2 Speed
Detects and displays system fan2 speed.

Fan1 Speed
Detects and displays system fan1 speed.

Vcore
Detects and displays the Vcore CPU voltage.

3.3V
Detects and displays 3.3V voltage.

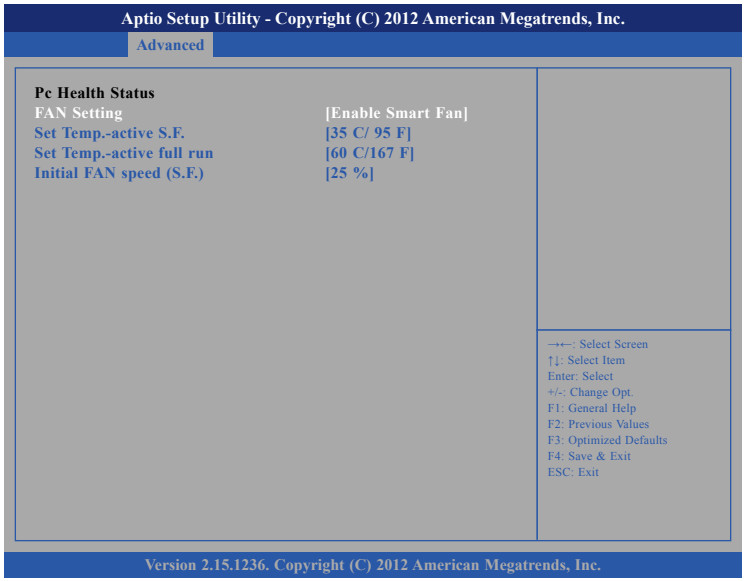
5V
Detects and displays 5V voltage.

12V
Detects and displays 12V voltage.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Smart Fan Function

This section is used to configure the fan's function.



FAN Setting

Configures the operating mode of the fan.

Set Temp.-active S.F.

Configures the temperature threshold to activate smart fan.

Set Temp.-active Full Run

Configures the temperature threshold to activate the fan in full speed.

Initial FAN Speed (S.F.)

Configures the starting fan speed of smart fan.

Serial Port Console Redirection

This section is used to configure the serial port that will be used for console redirection.

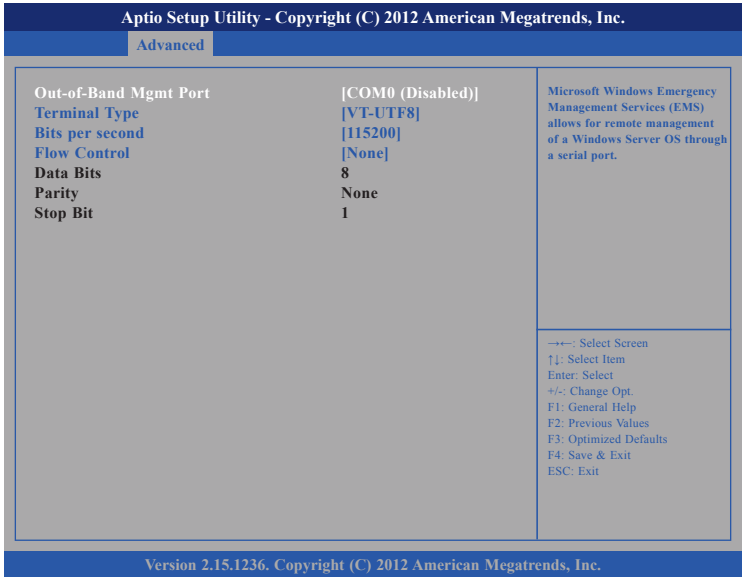
Console Redirection

Enables or disables console redirection.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Console Redirection Settings

Specifies how the host computer and the remote computer (which the user is using) will exchange data. Both computers should have the same or compatible settings.



Out-of-Band Mgmt Port

Enables or disables Microsoft Windows Emergency Management Services (EMS) for allowing remote management of a Windows Server OS through a serial port.

Terminal Type

ANSI	Extended ASCII character set.
VT100	ASCII character set.
VT100+	Extends VT100 to support color, function keys, etc.
VT-UTF8	Uses UTF8 encoding to map Unicode characters onto 1 or more bytes.

Bits Per Second

Selects the serial port transmission speed. The speed must match the other side. Long or noisy lines may require a lower speed.

Flow Control

Flow control can prevent data loss from buffer overflow. When sending data and the receiving buffers are full, a "stop" signal can be sent to stop the data flow.

Data Bits

Displays the current setting of Data Bits.

Parity

Displays the current setting of Parity.

Stop Bits

Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit.

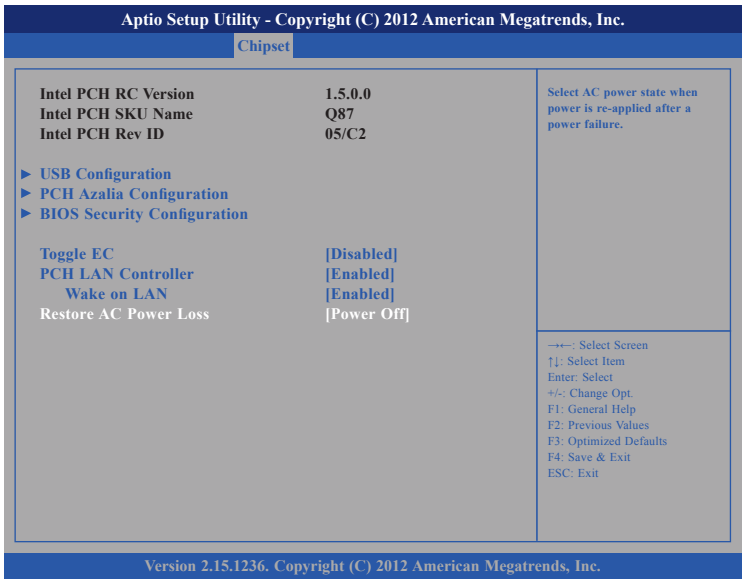
Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Chipset

This section is used to configure the system based on the specific features of the chipset.

Setting incorrect field values may cause the system to malfunction.

PCH-IO Configuration



Toggle EC

Enables or disables Toggle EC.

PCH LAN Controller

Enables or disables onboard NIC.

Wake on LAN

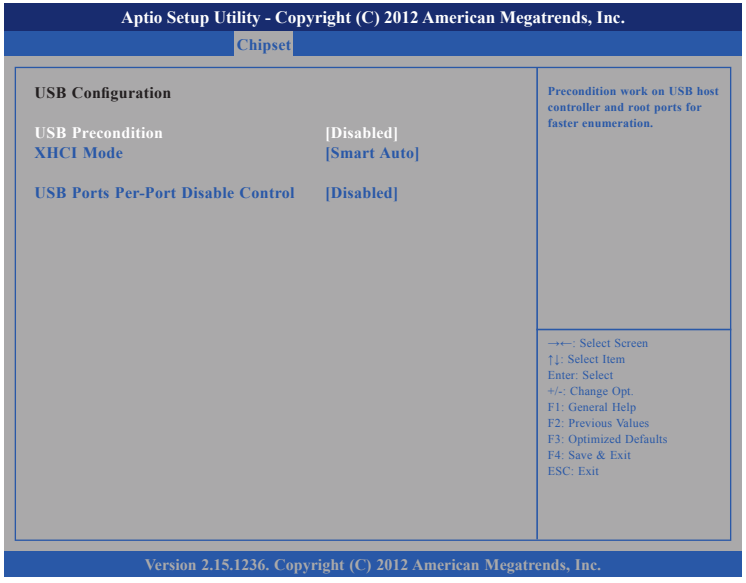
Enables or disables integrated LAN to wake the system.

Restore AC Power Loss

Select AC power state when power is re-applied after a power failure.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

USB Configuration

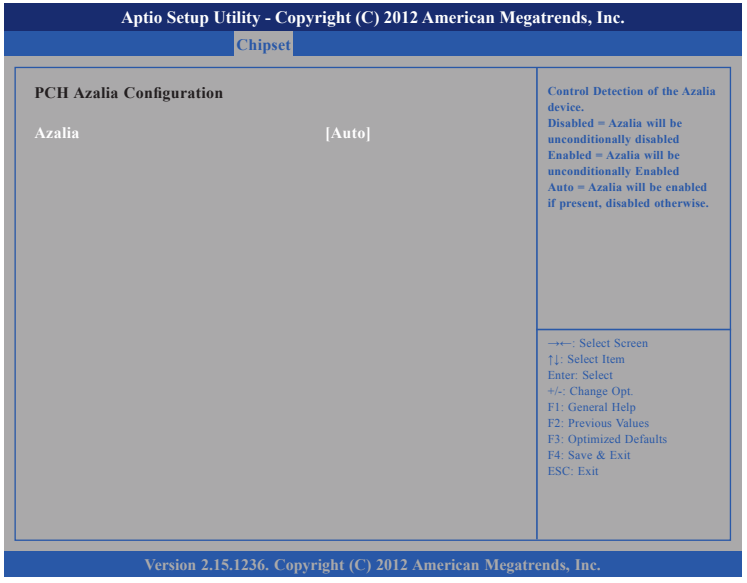


USB Precondition
Enables or disables precondition work on USB host controller and root ports for faster enumeration.

XHCI Mode
Configures USB 3.0 ports as USB 2.0 ports.

USB Ports Per-Port Disable Control
Enables or disables control of each USB port.

PCH Azalia Configuration

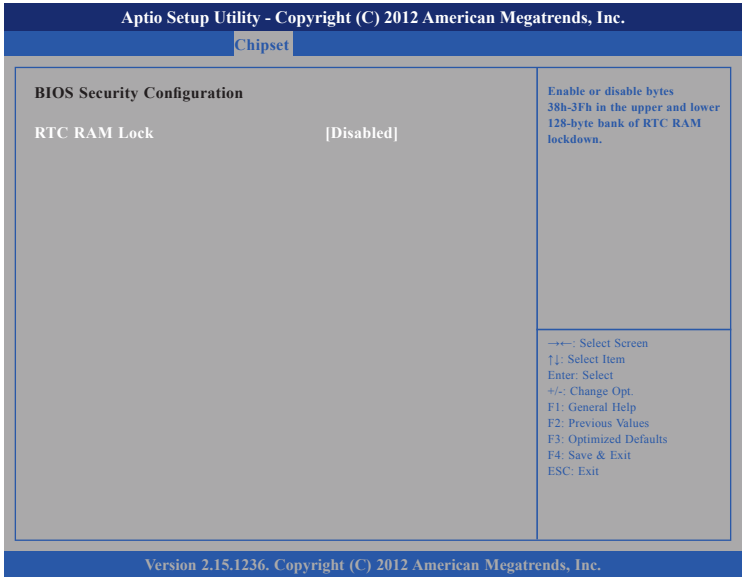


Azalia
Control Detection of the Azalia device.

Disabled	Azalia will be unconditionally disabled.
Enabled	Azalia will be unconditionally disabled.
Auto	Azalia will be enabled if present, disabled otherwise.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

BIOS Security Configuration



RTC RAM Lock
Enables or disables bytes 38h-3Fh in the upper and lower 128-byte bank of RTC RAM lockdown.

System Agent (SA) Configuration

VT-d
Enables or disables VT-d function on MCH.

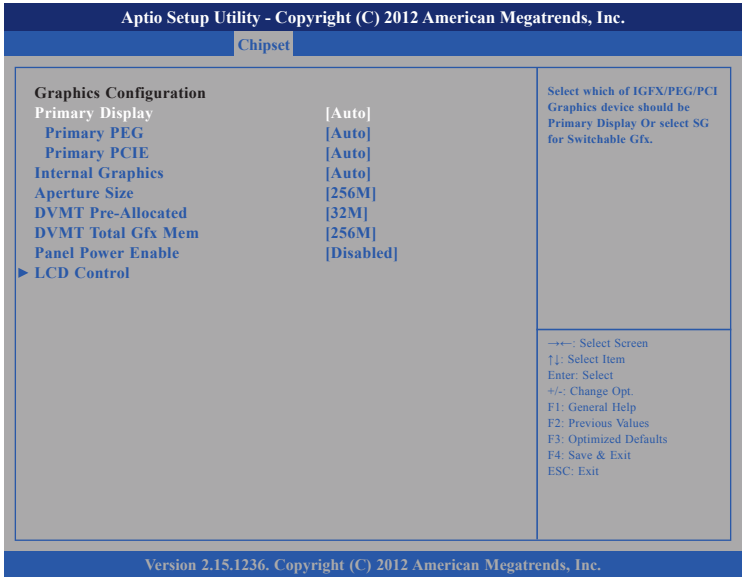
Graphics Configuration
Configures the graphic chip settings.

NB PCIe Configuration
Configures the NB PCI Express settings.

Memory Configuration
Configures the memory settings.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Graphics Configuration



Primary Display
Select which of IGFX/PEG/PCI graphics device should be primary display or select SG for switchable GFx.

Primary PEG
Select which PEG device should be the primary PEG.

Primary PCIE
Select which PCIE device should be the primary PCIE.

Internal Graphics
Keep IGD enabled based on the setup options.

Aperture Size
Select the Aperture size.

DVMT Pre-Allocated
Select DVMT 5.0 pre-allocated (fixed) graphics memory size used by the internal graphics device.

DVMT Total Gfx Mem
Select DVMT 5.0 Total Graphic Memory size used by the Internal Graphics Device.

Panel Power Enable
Enables or disables panel power.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

NB PCIe Configuration

PEG0 - Gen X
Configure PEG0 B0:D1:F0 Gen1-Gen3.

PEG1 - Gen X
Configure PEG1 B0:D1:F1 Gen1-Gen3.

PEG2 - Gen X
Configure PEG2 B0:D1:F2 Gen1-Gen3.

Memory Configuration

Memory Frequency Limiter
Configures the maximum frequency of the memory.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

Boot

This section is used to configure the boot features.

Quiet Boot

Enabled	Displays OEM logo instead of the POST messages.
Disabled	Displays normal POST messages.

Fast Boot

Enables or disables boot with initialization of a minimal set of devices required to launch active boot option. Has no effect for BBS boot options.

Boot Option Priorities

Adjust the boot sequence of the system. Boot Option #1 is the first boot device that the system will boot from, next will be #2 and so forth.

CD/DVD ROM Drive BBS Priorities

Use the CD/DVD ROM Drive BBS priorities options to set the order of the devices in this group.

Hard Drive BBS Priorities

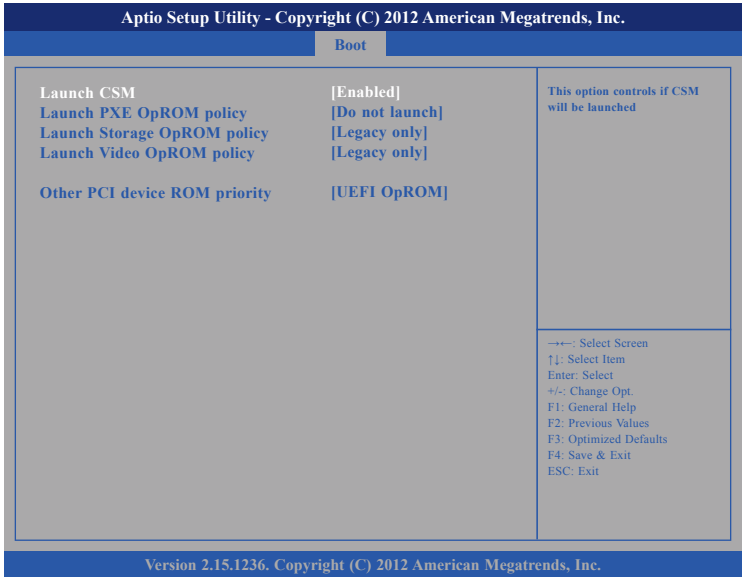
Use the Hard Disk Drive BBS priorities options to set the order of the devices in this group.

CSM Parameters

Parameters for OpROM execution, boot options, filter, etc.

Copyright © 2013 NEXCOM International Co., Ltd. All Rights Reserved.

CSM Parameters



Launch CSM
This option controls if CSM will be launched.

Launch PXE OpROM Policy
Controls the execution of UEFI and legacy PXE OpROM.

Launch Storage OpROM Policy
Controls the execution of UEFI and legacy storage OpROM.

Launch Video OpROM Policy
Controls the execution of UEFI and legacy video OpROM.

Other PCI Device ROM Priority
Configures what PCI devices for ROM to launch other than network, mass storage or video.

Warning Information

Warning:
Because BIOS flashing is potentially risky, we do NOT recommend to change any version of BIOS if current version of BIOS is fine.
