Important Notice

Due to the nature of wireless communications, transmission and reception of data can never be guaranteed. Data may be delayed, corrupted (i.e., have errors) or be totally lost. Although significant delays or losses of data are rare when wireless devices such as the router is used in a normal manner with a well-constructed network, the router should not be used in situations where failure to transmit or receive data could result in damage of any kind to the user or any other party, including but not limited to personal injury, death, or loss of property. Robustel accepts no responsibility for damages of any kind resulting from delays or errors in data transmitted or received using the router, or for failure of the router to transmit or receive such data.

Safety Precautions

General

- The router generates radio frequency (RF) power. When using the router, care must be taken on safety issues related to RF interference as well as regulations of RF equipment.
- Do not use your router in aircraft, hospitals, petrol stations or in places where using cellular products is prohibited.
- Be sure that the router will not be interfering with nearby equipment. For example: pacemakers or medical equipment. The antenna of the router should be away from computers, office equipment, home appliance, etc.
- An external antenna must be connected to the router for proper operation. Only uses approved antenna with the router. Please contact authorized distributor on finding an approved antenna.
- Always keep the antenna with minimum safety distance of 20 cm or more from human body. Do not put the antenna inside metallic box, containers, etc.
- RF exposure statements
 1. For mobile devices without co-location (the transmitting antenna is installed or located more than 20cm away from the body of user and nearby person)
- FCC RF Radiation Exposure Statement
 1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
 2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and human body.

Note: Some airlines may permit the use of cellular phones while the aircraft is on the ground and the door is open. Router may be used at this time.

Using the Router in Vehicle

- Check for any regulation or law authorizing the use of cellular devices in vehicle in local country before installing the router.
- The driver or operator of any vehicle should not operate the router while driving.
- Install the router by qualified personnel. Consult your vehicle distributor for any possible interference of electronic parts by the router.
- The router should be connected to the vehicle's supply system by using a fuse-protected terminal in the vehicle's fuse box.
- Be careful when the router is powered by the vehicle's main battery. The battery may be drained after extended period.

Protecting Your Router

To ensure error-free usage, please install and operate your router with care. Do remember the following:

- Do not expose the router to extreme conditions such as high humidity / rain, high temperature, direct sunlight, caustic / harsh chemicals, dust, or water.
- Do not try to disassemble or modify the router. There is no user serviceable part inside and the warranty would be void.
- Do not drop, hit or shake the router. Do not use the router under extreme vibrating conditions.
- Do not pull the antenna or power supply cable. Attach/detach by holding the connector.
- Connect the router only according to the instruction manual. Failure to do it will void the warranty.
- In case of problem, please contact authorized distributor.

Regulatory and Type Approval Information

Table 1: Directives

2011/65/EU	The European RoHS2.0 2011/65/EU Directive was issued by the European parliament and the European Council on 1 July 2011 on the restriction of the use of certain Hazardous substances in electrical and electronic equipment.	
2012/19/EU	The European WEEE 2012/19/EU Directive was issued by the European parliament and the European Council on 24 July 2012 on waste electrical and electronic equipment.	
2013/56/EU	The European 2013/56/EU Directive is a battery Directive which published in the EU official gazette on 10 December 2013. The button battery used in this product conforms to the standard of 2013/56/EU directive.	

Table 2: Standards of the electronic industry of the People's Republic of China

SJ/T 11363-2006	<p>The electronic industry standard of the People's Republic of China SJ/T 11363-2006 "Requirements for Concentration Limits for Certain Toxic and Hazardous Substances in Electronic Information Products" issued by the ministry of information industry of the People's Republic of China on November 6, 2006, stipulates the maximum allowable concentration of toxic and hazardous substances in electronic information products.</p> <p>Please see Table 3 for an overview of toxic or hazardous substances or elements that might be contained in product parts in concentrations above the limits defined by SJ/T 11363-2006.</p>
SJ/T 11364-2014	<p>The electronic industry standard of the People's Republic of China SJ/T 11364-2014 "Labeling Requirements for Restricted Use of Hazardous Substances in Electronic and Electrical Products" issued by the ministry of Industry and information technology of the People's Republic of China on July 9, 2014, stipulates the Labeling requirements of hazardous substances in electronic and electrical products, environmental protection use time limit and whether it can be recycled. This standard is applicable to electronic and electrical products sold within the territory of the People's Republic of China, and can also be used for reference in the logistics process of electronic and electrical products.</p> <p>The orange logo below is used for Robustel products:</p> <div style="text-align: right;">  </div> <p>Indicates its warning attribute, that is, some hazardous substances are contained in the product. The "10" in the middle of the legend refers to the environment-friendly Use Period (EFUP) * of electronic information product, which is 10 years. It can be used safely during the environment-friendly Use Period. After the environmental protection period of use, it should enter the recycling system.</p> <p>*The term of environmental protection use of electronic information products refers to the term during which the toxic and hazardous substances or elements contained in electronic information products will not be leaked or mutated and cause serious pollution to the environment or serious damage to people and property under normal conditions of use.</p>

Table 3: Toxic or Hazardous Substances or Elements with Defined Concentration Limits

Name of the Part	Hazardous Substances									
	(Pb)	(Hg)	(Cd)	(Cr(VI))	(PBB)	(PBDE)	(DEHP)	(BBP)	(DBP)	(DIBP)
Metal parts	o	o	o	o	–	–	–	–	–	–
Circuit modules	o	o	o	o	o	o	o	o	o	o
Cables and cable assemblies	o	o	o	o	o	o	o	o	o	o
Plastic and polymeric parts	o	o	o	o	o	o	o	o	o	o

o:
Indicates that this toxic or hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement in RoHS2.0.

X:
Indicates that this toxic or hazardous substance contained in at least one of the homogeneous materials for this part *might exceed* the limit requirement in RoHS2.0.

–:
Indicates that it does not contain the toxic or hazardous substance.

Chapter 1 Product Overview

1.1 Introduction

Robustel R1511 industrial-grade cellular VPN wireless router provides high-speed wireless network bandwidth for devices through wireless connection to ensure a stable connection to the wireless network.

Robustel's routers are based on the "RobustOS" operating system. With 5 years of mature and innovative functions, RobustOS provides customers with a very professional product with an easy-to-navigate graphical user interface and essential IoT applications and connection stability. The router occupies a very small space and is very useful for space-constrained applications, such as ticket vending machines, vending machines, hidden surveillance and digital signage applications.

1.2 Package Contents

Before installing your R1511 Router, verify the kit contents as following.

Note: Accessories are subject to the actual order. If you have any questions, please contact your sales representative.

- 1 x Robustel R1511 Industrial Cellular VPN Router

- 1 x 2-pin 3.5 mm male terminal block for power supply

- 1 x 3-pin 3.5 mm male terminal block for 232/485

- 3G/4G SMA-J cellular antenna
Stubby antenna

- RP- SMA-J WIFI antenna
Stubby antenna

- 1 x SIM Card Sticker

Optional Accessories (sold separately)

- Ethernet cable

- AC/DC power adapter (12V DC, 1 A; EU/US/UK/AU plug optional)

- Wall mounting kit

- 35 mm DIN rail mounting kit

1.3 Specifications

Cellular Interface

- Number of antennas: 2
- Connector: SMA-K
- SIM: 1* (3 V & 1.8 V) Mini-SIM or eSIM

Ethernet Interface

- Number of ports: 2 x 10/100 Mbps, 2 x LAN or 1 x LAN + 1 x WAN
- Magnet isolation protection: 1.5 KV

WiFi Interface

- Number of antennas: 1 (external antenna)
- Connector: RP-SMA-K (external antenna)
- Standards: 802.11b/g/n, supports AP and Client modes
- Frequency bands: 2.4 GHz
- Security: WEP, WPA, WPA2
- Encryption: 64/128 AES, TKIP
- Data speed: 2*2 MIMO, 300 Mbps

Serial port

- Type: 1 x RS232 or 1 x RS485
- Connector: 3-pin 3.5 mm female socket

Others

- 1 x Reset button (RST button)
- LED indicators - 1 x RUN, 1 x MDM, 1 x USR, 1 x RSSI, 1 x WiFi
- Built-in: Watchdog, Timer

Power Supply and Consumption

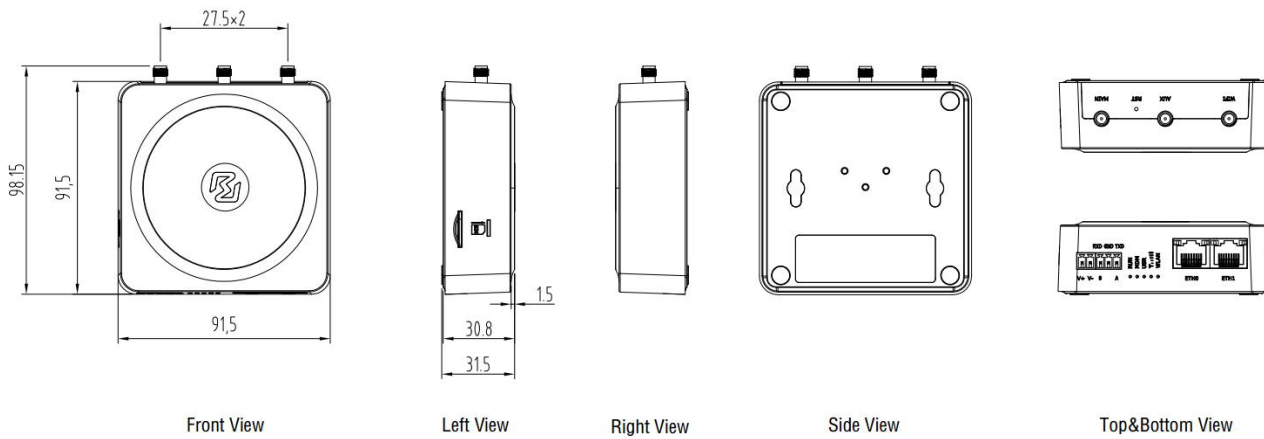

- Connector: 2-pin 3.5 mm female socket
- Input voltage: 9 to 36V DC
- Power consumption: Idle: 100 mA@12 V;
Data link: 500 mA (peak) @12 V

Physical Characteristics

- Ingress protection: IP30
- Housing & Weight: Plastic, 150 g

- Dimensions: 91.5mm x 91.5mm x 31.5mm
- Installations: Desktop, wall mounting or DIN rail mounting (Wall mounting and Din rail mounting installation requires additional installation accessories)
- Operating Temperature: -25 to +70 °C
- Storage Temperature: -40 to +85 °C
- Relative Humidity: 5 to 95% RH

1.4 Dimensions

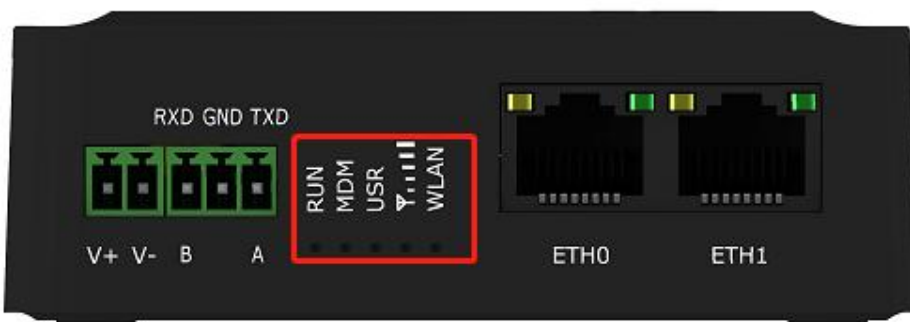

Chapter 2 Hardware Installation

2.1 Pin Description

PIN	Power	232/485	Note
1	V+	--	VCC
2	V-	--	VSS
3	--	RXD/B	RS232 data receiving/RS485_B, please refer to specific model for specific definition
4	--	GND	Signal ground
5	--	TXD/A	RS232 data transmission/RS485_A, please refer to specific model for specific definition

2.2 LED Indicators

Name	Color	Status	Description
RUN	Green	On, solid	Router is powered on (System is initializing)
		On, blinking	Router starts operating
		Off	Router is powered off
MDM	Green	On, solid	Link connection is working
		On, blinking	Data is sent and received.
		Off	Link connection is not working

USR	USR-Open VPN	Green	On, solid	OpenVPN connection is established
			Off	OpenVPN connection is not established
	USR-IPsec	Green	On, solid	IPsec connection is established
			Off	IPsec connection is not established
RSSI		Green	On, solid	Received Signal Strength Indication greater than -73 dBm (Strong signal)
		Green	On, blinking	Received Signal Strength Indication -91 to -73 dBm (Moderate signal)
		Green	Off	Received Signal Strength Indication -111 to -93dBm (Weak signal)
WLAN		Green	On, solid	WiFi is enabled and working properly
		Green	Off	WiFi is disabled or not working properly

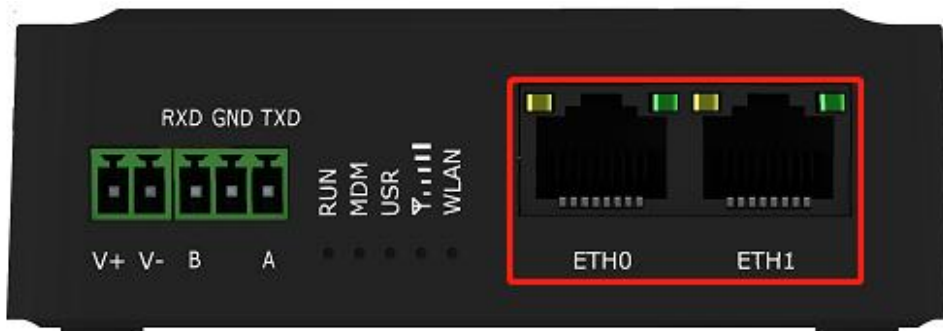

Note: click Services > Advanced > system > System Settings > Custom LED light type to set the display type of USR LED.

2.3 Reset Button

Function	Operation
Reboot	Press and hold the RST button for 2 to 7 seconds under the operating status.
Restore to factory default settings	Wait for 0~20 seconds after powering up the router, press and hold the RST button until four LEDs(RUN, MDM, USR, RSSI) start blinking one by one, and release the button to return the router to factory defaults.

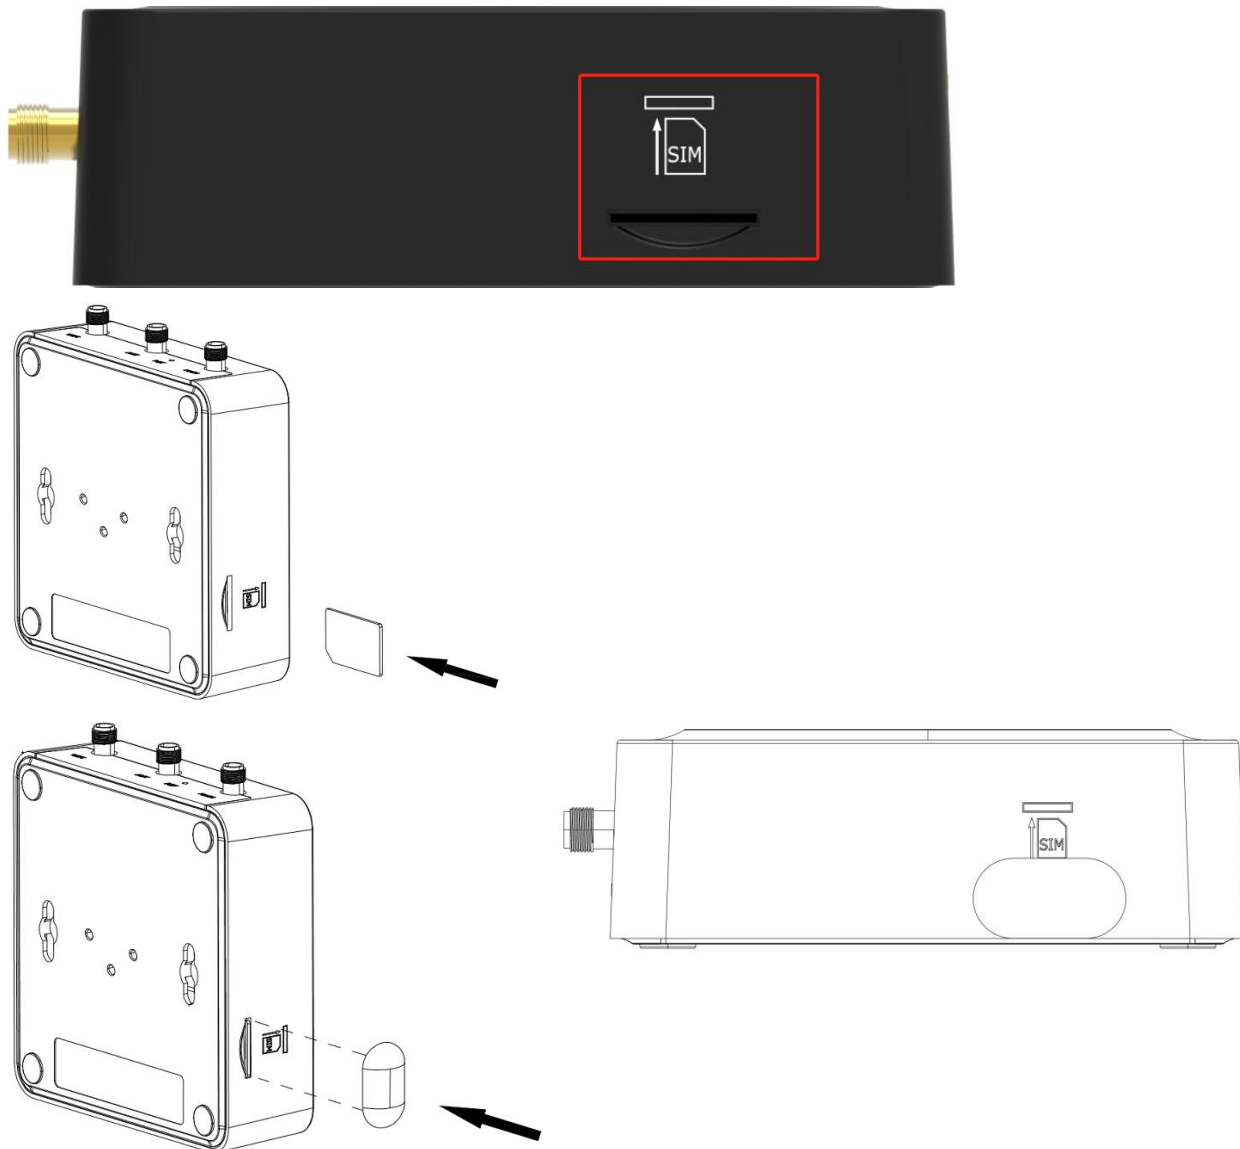

2.4 Ethernet Ports

There are two Ethernet ports on R1511, including ETH0 (WAN/LAN), and ETH1. Each has two LED indicators. The green one is a link indicator but the yellow one doesn't mean anything (always off). For details about status, see the table below.

Indicator	Status	Description
Link indicator (Green)	On, solid	Connection is established
	On, blinking	Data is being transferred
	Off	Connection is not established

2.5 Insert or Remove SIM Card

Insert or remove the SIM card as shown in the following steps.

- **Insert SIM card**

1. Make sure router is powered off.
2. To insert SIM card, press the card with finger until you hear a click.
3. After the SIM card is inserted, attach the SIM card sticker to the card slot.

- **Remove SIM card**

1. Make sure router is powered off.
2. Tear the SIM card sticker from the slot.
3. To remove SIM card, press the card with finger until it pops out and then take out the card.

Note:

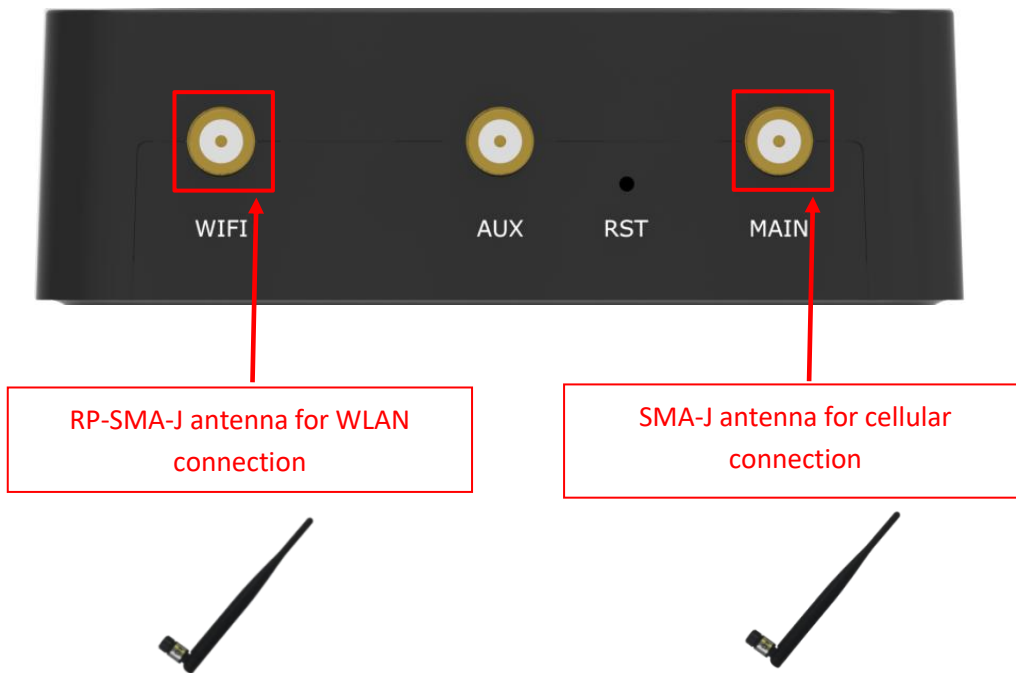

1. Use the specific M2M SIM card when the device is working in extreme temperature, because the regular card for long-time working in harsh environment will be disconnected frequently.
2. Do not touch the metal of the card surface in case information in the card will lose or be destroyed.

3. Do not bend or scratch the card.
4. Keep the card away from electricity and magnetism.
5. Make sure router is powered off before inserting or removing the card.

2.6 Attach External Antenna (SMA Type)

Attach an external SMA antenna to the router's antenna connector and twist tightly. Make sure the antenna is within the correct frequency range provided by the ISP and with 50 Ohm impedance.

Note: Recommended torque for tightening is 0.35 N.m.

2.7 Mount the Router

The router can be placed on a desktop or mounted to a wall or a 35 mm DIN rail.

Two methods for mounting the router

1. Wall mounting (measured in mm)
 - Option 1

First, drill holes on the wall, the distance between the two holes is 60mm, then knock the expansion pipe into the wall with a rubber hammer, align the screw with the expansion pipe, insert the screw and reserve the corresponding length, and finally fix the product on the wall.

- Option 2
Size of Wall mounted kit:

Use 3 pcs of M3 screws to mount the router on the wall mounting kit, and then use 2 pcs of M3 screws to mount the wall mounting kit on the wall.

2. DIN rail mounting (measured in mm)

Use 3 pcs of M3 screws to mount the router on the DIN rail, and then hang the DIN rail on the holder. You need to choose a standard holder.

2.8 Connect the Router to a Computer

Connect a standard Ethernet cable to the port marked ETH0~ETH1 at the front of the R1511 Router, and connect the other end of the cable to your computer.

2.9 Power Supply

CONNECTING THE POWER CABLE

COLOR	POLARITY
RED	+
YELLOW	-

R1511 Router doesn't support reverse polarity protection; always refer to the figure above to connect the power adapter correctly. There are two cables associated with the power adapter. Following to the color of the head, connect the cable marked red to the positive pole through a terminal block, and connect the yellow one to the negative in the same way.

Note: The range of power voltage is 9 to 36V DC.

Chapter 3 Initial Configuration

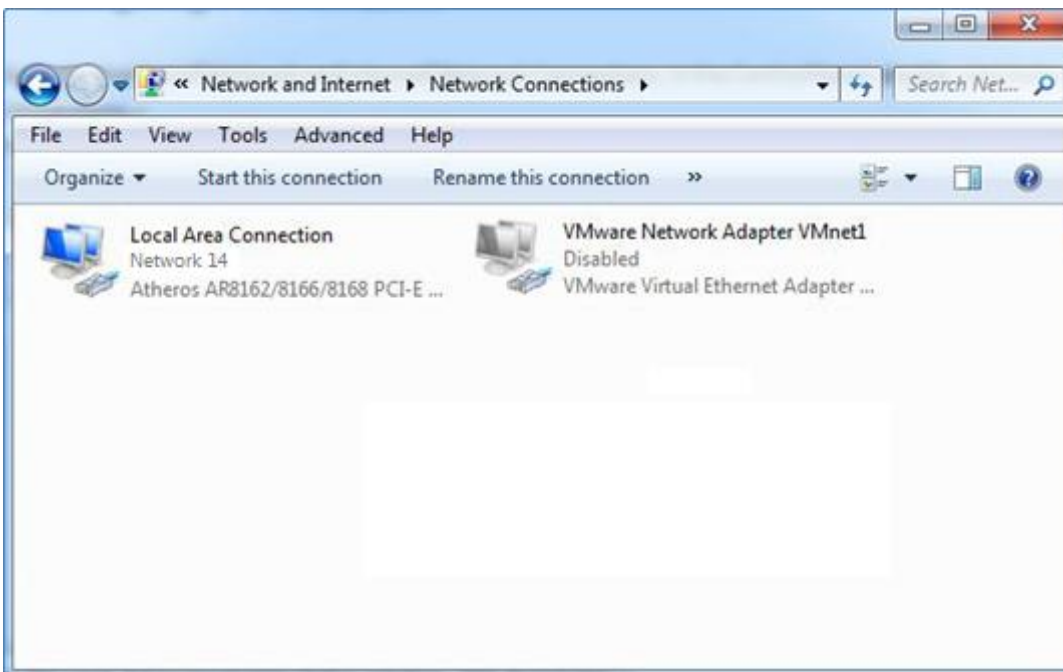

The router can be configured through your web browser that including IE 8.0 or above, Chrome and Firefox, etc. A web browser is included as a standard application in the following operating systems: Linux, Mac OS, Windows 98/NT/2000/XP/Me/Vista/7/8, etc. It provides an easy and user-friendly interface for configuration. There are various ways to connect the router, either through an external repeater/hub or connect directly to your PC. However, make sure that your PC has an Ethernet interface properly installed prior to connecting the router. You must configure your PC to obtain an IP address through a DHCP server or a fixed IP address that must be in the same subnet as the router. If you encounter any problems accessing the router web interface, it is advisable to uninstall your firewall program on your PC, as this tends to cause problems accessing the IP address of the router.

3.1 Configure the PC

There are two methods to get IP address for the PC. One is to obtain an IP address automatically from “Local Area Connection”, and another is to configure a static IP address manually within the same subnet of the router. Please refer to the steps below.

Here take **Windows 7** as example, and the configuration for windows system is similar.

1. Click **Start > Control Panel**, double-click **Network and Internet**, and then double-click **Network Connections**.

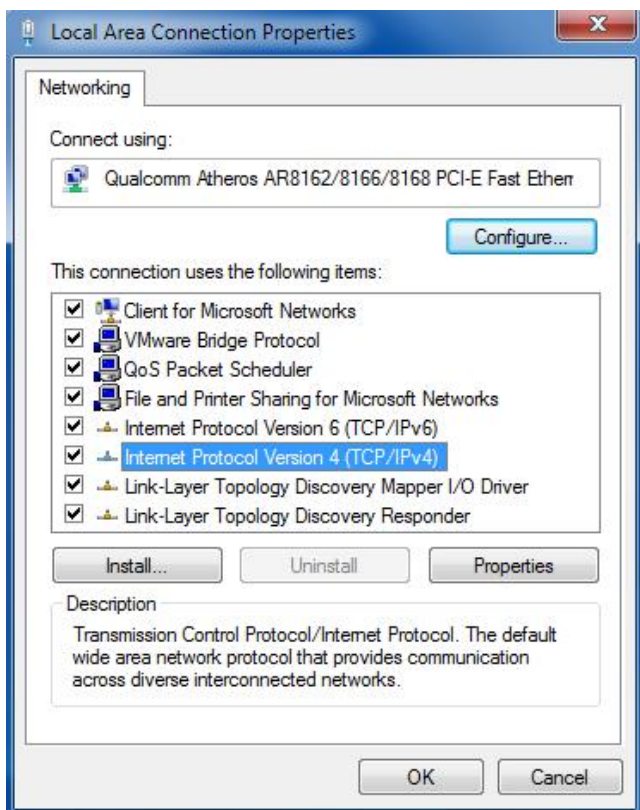

2. Click **Properties** in the window of **Local Area Connection**

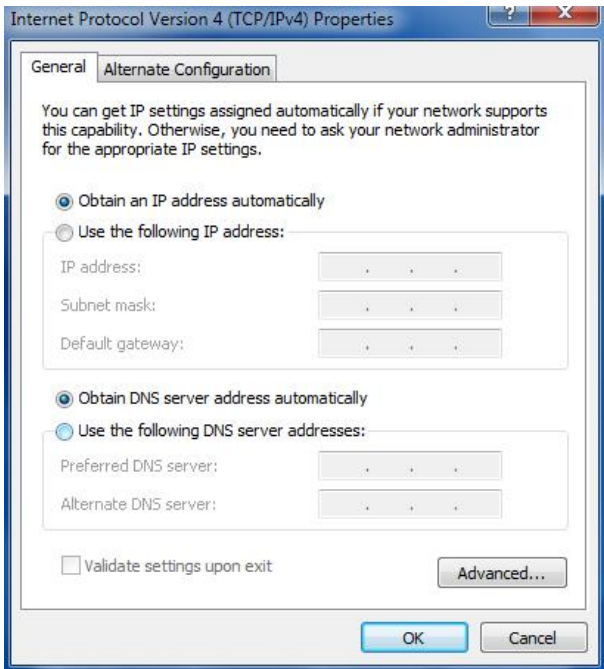

Status.

3. Choose **Internet Protocol Version 4 (TCP/IPv4)** and click **Properties**.

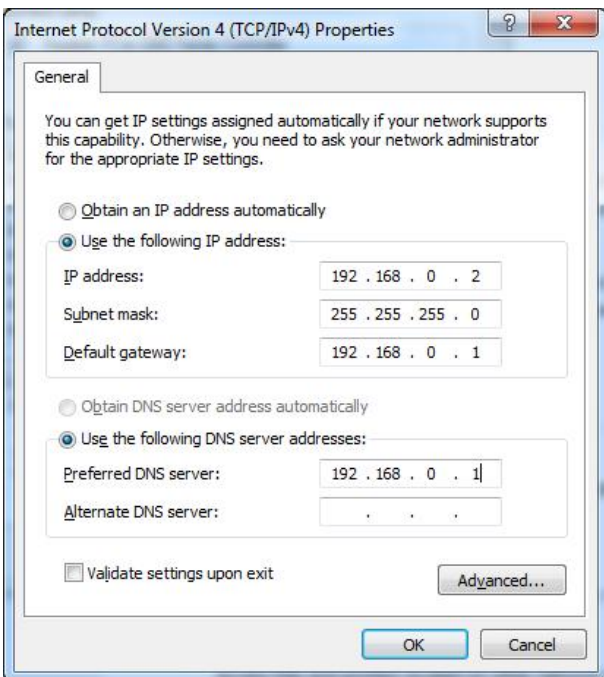

4. Two ways for configuring the IP address of PC

Obtain an IP address from the DHCP server automatically; Click "**Obtain an IP address automatically**";

Use the following IP address:

(Configured a static IP address manually within the same subnet of the router, click and configure "Use the following IP address"

5. Click **OK** to finish the configuration.

3.2 Factory Default Settings

Before configuring your router, you need to know the following default settings.

Item	Description
Username	admin

Password	admin
ETH0	WAN mode or 192.168.0.1/255.255.255.0, LAN mode
ETH1	192.168.0.1/255.255.255.0, LAN mode
DHCP Server	Enabled

3.3 Log in the Router

To log in to the management page and view the configuration status of your router, please follow the steps below.

1. On your PC, open a web browser such as Internet Explorer and Google, etc.
2. From your web browser, type the IP address of the router into the address bar and press enter. The default IP address of the router is <http://192.168.0.1/>, though the actual address may vary.

3. In the login page, enter the username and password, choose language and then click **LOGIN**. The default username and password are “admin”.

Note: If enter the wrong username or password over six times, the login web will be locked for 5 minutes.

3.4 Control Panel

After logging in, the home page of the R1511 Router’s web interface is displayed, for example.

robustel Save & Apply | Reboot | Logout

⚠ It is strongly recommended to change the default password. x

4.2.2 LAN

This section allows you to set the related parameters for LAN port. There are two LAN ports on R1511 Router, including ETH0, and ETH1. Wan is assigned as ETH0. The ETH0 and ETH1 can freely choose from lan0 and lan1, but at least one LAN port must be assigned as lan0. The default settings of ETH0 and ETH1 are lan0 and their default IP are 192.168.0.1/255.255.255.0.

LAN

By default, there is a LAN port (lan0) in the list. To begin adding a new LAN port (lan1), please configure ETH1, ETH2 or ETH3 as lan1 first in **Ethernet > Ports > Port Settings**. Otherwise, the operation will be prompted as "List is full".

LAN	Multiple IP	Status			
^ Network Settings ?					
Index	Interface	IP Address	Netmask	VLAN ID	
1	lan0	192.168.0.1	255.255.255.0	0	+ ✎ ✕

Note: Lan0 cannot be deleted.

You may click + to add a new LAN port, or click ✕ to delete the current LAN port. Now, click ✎ to edit the configuration of the LAN port.

This section allows you to view the status of AP.

The screenshot shows the router's configuration interface with tabs for WiFi, Access Point, Advanced, ACL, and Status. The WiFi tab is active, displaying the 'AP Status' section with fields for Status (FAILED), Channel, Channel Width, and MAC Address. Below this is the 'Associated Stations' section with a table header: Index, MAC Address, IP Address, Name, Connected Time, and Signal.

Note: WiFi is off by default. Follow the steps below to enable it and configure the router as WiFi client.

WiFi Client

Configure Router as WiFi Client

Click **Interface > WiFi > WiFi**, select “Client” as the mode and regarding the AP type to choose the related Client Band then click “Submit”.

The screenshot shows the WiFi configuration page with the 'General Settings' section. The 'Mode' dropdown is set to 'Client' and the 'Region' dropdown is set to 'SE'.

And then a “WLAN” column will appear under the Interface list.

The screenshot shows the router's configuration page with the 'Interface' list on the left. The 'WLAN' option is highlighted with a red box. The main content area shows the WiFi configuration page with the 'General Settings' section.

Click **Interface > Link Manager > Link Settings**, and click the edit button of WLAN, then configure its related parameters.

The screenshot shows the 'WLAN Settings' page with fields for SSID (router), Connect to Hidden SSID (OFF), and Password.

Click **Interface > WLAN** to configure the parameters of WiFi Client after setting the mode as Client.

4.3 Network

4.3.1 Route

This section allows you to set the static route. Up to 20 static routes can be added to the router. Static route is a form of routing that occurs when a router uses a manually-configured routing entry, rather than information from a dynamic routing traffic. Route Information Protocol (RIP) is widely used in small network with stable use rate. Open Shortest Path First (OSPF) is made router within a single autonomous system and used in large network.

Click network > route > static route to enter the static route table, which allows users to manually add, remove, or modify static route rules.

Static Route

Click **+** to add static route. The maximum count is 20.

Static Route		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Description	Enter a description for this route.	Null
Destination	Enter the IP address of destination host or destination network.	Null
Netmask	Enter the Netmask of destination host or destination network.	Null

DMZ

The DMZ, also known as the Demilitarized Zone, is being transformed into a large swath of land. It is to solve the problem that the access user of the external network cannot access the internal network server after installing the firewall, and set up a buffer between the non-secure system and the secure system. A DMZ host is an Intranet host that has open access to all ports except the occupied and forwarded ports to the specified address.

General Settings @ Tunnel		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Enable	Click the toggle button to enable/disable this IPsec tunnel.	ON
Description	Enter a description for this IPsec tunnel.	Null
Gateway	Enter the address of remote side IPsec VPN server. 0.0.0.0 means for any address.	Null
Mode	Select from "Tunnel" and "Transport". <ul style="list-style-type: none"> Tunnel: Commonly used between routers, or at an end-station to a router, the router acting as a proxy for the hosts behind it Transport: Used between end-stations or between an end-station and a router, if the router is being treated as a host-for example, an encrypted Telnet session from a workstation to a router, in which the router is the actual destination 	Tunnel
Protocol	Select the security protocols from "ESP" and "AH". <ul style="list-style-type: none"> ESP: Use the ESP protocol AH: Use the AH protocol 	ESP
Local Subnet	Enter the local subnet's address with mask protected by IPsec, e.g. 192.168.1.0/24	Null
Remote Subnet	Enter the remote subnet's address with mask protected by IPsec, e.g. 10.8.0.0/24	Null
Link Binding	Select from "WWAN1", "WAN", or "WLAN".	Not bound

The window is displayed as below when choosing "PSK" as the authentication type.

The screenshot shows the 'IKE Settings' window. The 'Authentication Type' dropdown menu is highlighted with a red box and is set to 'PSK'. Other settings include: IKE Type (IKEv1), Negotiation Mode (Main), Encryption Algorithm (3DES), Authentication Algorithm (SHA1), IKE DH Group (DHgroup2), PSK Secret (empty), Local ID Type (Default), Remote ID Type (Default), and IKE Lifetime (86400).

The window is displayed as below when choosing "CA" as the authentication type.

IKE Settings		
Item	Description	Default
IKE Type	Select from "IKEv1" and "IKEv2".	IKEv1
Negotiation Mode	Select from "Main" and "Aggressive" for the IKE negotiation mode in phase 1. If the IP address of one end of an IPsec tunnel is obtained dynamically, the IKE negotiation mode must be aggressive. In this case, SAs can be established as long as the username and password are correct.	Main Mode
Encryption Algorithm	Select from "3DES", "AES128", "AES192" and "AES256" to be used in IKE negotiation. <ul style="list-style-type: none"> 3DES: Use 168-bit 3DES encryption algorithm in CBC mode AES128: Use 128-bit AES encryption algorithm in CBC mode AES192: Use 192-bit AES encryption algorithm in CBC mode AES256: Use 256-bit AES encryption algorithm in CBC mode 	3DES
Authentication Algorithm	Select from "MD5", "SHA1", "SHA2 256" or "SHA2 512" to be used in IKE negotiation.	SHA1
IKE DH Group	Select from "DHgroup1", "DHgroup2", "DHgroup5", "DHgroup14", "DHgroup15", "DHgroup16", "DHgroup17" or "DHgroup18" to be used in key negotiation phase 1.	DHgroup2
Authentication Type	Select from "PSK", "CA", "PKCS#12", "xAuth PSK" and "xAuth CA" to be used in IKE negotiation. <ul style="list-style-type: none"> PSK: Pre-shared Key CA: x509 Certification Authority xAuth: Extended Authentication to AAA server PKCS#12: Exchange digital certificate authentication 	PSK
PSK Secret	Enter the pre-shared key.	Null
Local ID Type	Select from "Default", "FQDN" and "User FQDN" for IKE negotiation. <ul style="list-style-type: none"> Default: Uses an IP address as the ID in IKE negotiation FQDN: Uses an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security 	Default

IKE Settings		
Item	Description	Default
	router, e.g., test.robustel.com <ul style="list-style-type: none"> User FQDN: Uses a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with a sign "@" for the local security router, e.g., test@robustel.com 	
Remote ID Type	Select from "Default", "FQDN" and "User FQDN" for IKE negotiation. <ul style="list-style-type: none"> Default: Uses an IP address as the ID in IKE negotiation FQDN: Uses an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security router, e.g., test.robustel.com User FQDN: Uses a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with a sign "@" for the local security router, e.g., test@robustel.com 	Default
IKE Lifetime	Set the lifetime in IKE negotiation. Before an SA expires, IKE negotiates a new SA. As soon as the new SA is set up, it takes effect immediately and the old one will be cleared automatically when it expires.	86400
Private Key Password	Enter the private key under the "CA" and "xAuth CA" authentication types.	Null
Username	Enter the username used for the "xAuth PSK" and "xAuth CA" authentication types.	Null
Password	Enter the password used for the "xAuth PSK" and "xAuth CA" authentication types.	Null

If click **VPN > IPsec > Tunnel > General Settings**, and choose **ESP** as protocol. The specific parameter configuration is shown as below.

Expert Options ?

SA Settings		
Item	Description	Default
Encrypt Algorithm	Select from “3DES”, “AES128”, “AES192” or “AES256” when you select “ESP” in “Protocol”. Higher security means more complex implementation and lower speed. DES is enough to meet general requirements. Use 3DES when high confidentiality and security are required.	3DES
Authentication Algorithm	Select from “MD5”, “SHA1”, “SHA2 256” or “SHA2 512” to be used in SA negotiation.	SHA1
PFS Group	Select from “PFS (N/A)”, “DHgroup1”, “DHgroup2”, “DHgroup5”, “DHgroup14”, “DHgroup15”, “DHgroup16”, “DHgroup17” or “DHgroup18” to be used in SA negotiation.	DHgroup2
SA Lifetime	Set the IPsec SA lifetime. When negotiating to set up IPsec SAs, IKE uses the smaller one between the lifetime set locally and the lifetime proposed by the peer.	28800
DPD Interval	Set the interval after which DPD is triggered if no IPsec protected packets is received from the peer. DPD is a Dead peer detection. DPD irregularly detects dead IKE peers. When the local end sends an IPsec packet, DPD checks the time the last IPsec packet was received from the peer. If the time exceeds the DPD interval, it sends a DPD hello to the peer. If the local end receives no DPD acknowledgment within the DPD packet retransmission interval, it retransmits the DPD hello. If the local end still receives no DPD acknowledgment after having made the maximum number of retransmission attempts, it considers the peer already dead, and clears the IKE SA and the IPsec SAs based on the IKE SA.	30
DPD Failures	Set the timeout of DPD (Dead Peer Detection) packets.	180
Advanced Settings		
Enable Compression	Click the toggle button to enable/disable this option. Enable to compress the inner headers of IP packets.	OFF
Enable Forced Encapsulation	Click the switch button to enable/disable this option. When enabled, UDP encapsulation of esp packets is enforced even if NAT conditions are not detected. This may help overcome restrictive firewalls.	OFF

4.4.2 OpenVPN

This section allows you to set the OpenVPN and the related parameters. OpenVPN is an open-source software application that implements virtual private network (VPN) techniques for creating secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. Router supports point-to-point and point-to-points connections.

Click "**VPN > OpenVPN > OpenVPN**" to display as follows:

4.5 Services

4.5.1 Syslog

This section allows you to set the syslog parameters. The system log of the router can be saved in the local, also supports to be sent to remote log server and specified application debugging. By default, the “Log to Remote” option is disabled.

The window is displayed as below when enabling the “Log to Remote” option.

Syslog Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the Syslog settings option.	ON
Syslog Level	Select from “Debug”, “Info”, “Notice”, “Warning” or “Error”, which from low to high. The lower level will output more syslog in detail.	Debug
Save Position	Select the save position from “RAM” or “NVM. Choose “RAM”, the data will be cleared after reboot. Note: It's not recommended that saving syslog to NVM (Non-Volatile Memory) for a long time.	RAM
Log to Remote	Click the toggle button to enable/disable this option. Enable to allow router sending syslog to the remote syslog server. You need to enter the IP and Port of the syslog server.	OFF
Add Identifier	Click the toggle button to enable/disable this option. When enabled, you can add serial number to syslog message which used for loading Syslog to RobustLink.	OFF

Remote IP Address	Enter the IP address of syslog server when enabling the “Log to Remote” option.	Null
Remote Port	Enter the port of syslog server when enabling the “Log to Remote” option.	514

4.5.2 Event

This section allows you to set the event parameters. Event feature provides an ability to send alerts by SNMP and RobustLink when certain system events occur.

Enable STARTTLS	Click the toggle button to enable/disable STARTTLS encryption.	OFF
Outgoing server	Enter the SMTP server IP Address or domain name.	Null
Server port	Enter the SMTP server port.	25
Timeout	Set the max time for sending email to SMTP server. When the server doesn't receive the email over this time, it will try to resend.	10
Auth Login	If the mail server supports AUTH login, you must enable this button and set the username and password.	OFF
Username	Enter the username which has been registered from SMTP server.	OFF
Password	Enter the password of the username above.	Null
From	Enter the source address of the email.	Null
Subject	Enter the subject of this email.	Null

4.5.6 DDNS

This section allows you to set the DDNS parameters. The Dynamic DNS function allows you to alias a dynamic IP address to a static domain name, allows you whose ISP does not assign them a static IP address to use a domain name. This is especially useful for hosting servers via your connection, so that anyone wishing to connect to you may use your domain name, rather than having to use your dynamic IP address, which changes from time to time. This dynamic IP address is the WAN IP address of the router, which is assigned to you by your ISP. The service provider defaults to "DynDNS", as shown below.

Click **Service > DDNS** to set the parameters related to DDNS. The service provider defaults to DynDNS.

The screenshot shows the 'DDNS Settings' window. At the top, there are two tabs: 'DDNS' and 'Status', with 'Status' being the active tab. Below the tabs, the 'DDNS Settings' section is expanded. It contains the following fields:

- Enable:** A toggle switch currently set to 'OFF'.
- Service Provider:** A dropdown menu with 'DynDNS' selected.
- Hostname:** An empty text input field.
- Username:** An empty text input field.
- Password:** An empty text input field.
- Max Tries:** A text input field containing the number '3', with a help icon to its right.

When service provider chose "Custom", the window is displayed as below.

The screenshot shows the 'DDNS Settings' window with 'Custom' selected in the 'Service Provider' dropdown. The 'Enable' toggle is still 'OFF'. The 'URL' field is visible below the 'Service Provider' dropdown. The 'Service Provider' dropdown and its value 'Custom' are highlighted with a red rectangular box.

DDNS Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the DDNS option.	OFF
Service Provider	Select the DDNS service from “DynDNS”, “NO-IP”, “3322” or “Custom”. Note: the DDNS service only can be used after registered by Corresponding service provider.	DynDNS
Hostname	Enter the hostname provided by the DDNS server.	Null
Username	Enter the username provided by the DDNS server.	Null
Password	Enter the password provided by the DDNS server.	Null
URL	Enter the URL customized by user.	Null
Max Tries	Enter max tries	3

Click “Status” bar to view the status of the DDNS.

DDNS Status	
Item	Description
Status	Display the current status of the DDNS.
Last Update Time	Display the date and time for the DDNS was last updated successfully.

4.5.7 SSH

Router supports SSH password access and secret-key access.

SSH Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable this option. When enabled, you can access the router via SSH.	ON
Port	Set the port of the SSH access.	22

Disable Password Logins	Click the toggle button to enable/disable this option. When enabled, you cannot use username and password to access the router via SSH. In this case, only the key can be used for login.	OFF
-------------------------	---	-----

SSH | Keys Management

^ Import Authorized Keys

Authorized Keys No file chosen

Import Authorized Keys	
Item	Description
Authorized Keys	Click on "Choose File" to locate an authorized key from your computer, and then click "Import" to import this key into your router.

4.5.8 Web Server

This section allows you to modify the parameters of Web Server.

Web Server | Certificate Management

^ General Settings

HTTP Port ?

HTTPS Port ?

General Settings @ Web Server		
Item	Description	Default
HTTP Port	Enter the HTTP port number you want to change in router's Web Server. On a Web server, port 80 is the port that the server "listens to" or expects to receive from a Web client. If you configure the router with other HTTP Port number except 80, only adding that port number then you can login router's Web Server.	80
HTTPS Port	Enter the HTTPS port number you want to change in router's Web Server. On a Web server, port 443 is the port that the server "listens to" or expects to receive from a Web client. If you configure the router with other HTTPS Port number except 443, only adding that port number then you can login router's Web Server. Note: HTTPS is more secure than HTTP. In many cases, clients may be exchanging confidential information with a server, which needs to be secured in order to prevent unauthorized access. For this reason, HTTP was developed by Netscape corporation to allow authorization and secured transactions.	443

This section allows you to import the certificate file into the router.

Web Server | Certificate Management

^ Import Certificate

Import Type: CA

HTTPS Certificate: Choose File No file chosen Import

Import Certificate		
Item	Description	Default
Import Type	Select from "CA" and "Private Key". <ul style="list-style-type: none"> CA: a digital certificate issued by CA center Private Key: a private key file 	CA

Syslog Files	
Syslog Files List	It can show at most 5 syslog files in the list, the files’ name range from message0 to message 4. And the newest syslog file will be placed on the top of the list.
System Diagnosing Data	
Generate	Click to generate the syslog diagnosing file.

4.6.2 Update

This section allows you to upgrade the firmware of your router. Click **System > Update > System Update**, and click on “Choose File” to locate the firmware file to be used for the upgrade. Once the latest firmware has been chosen, click “Update” to start the upgrade process. The upgrade process may take several minutes. Do not turn off your Router during the firmware upgrade process.

Note: To access the latest firmware file, please contact your technical support engineer.

4.6.3 App Center

This section allows you to add some required or customized applications to the router. Import and install your applications to the App Center, and reboot the device according to the system prompts. Each installed application will be displayed under the “Services” menu, while other applications related to VPN will be displayed under the “VPN” menu.

Note: After importing the applications to the router, the page display may have a slight delay due to the browser cache. It is recommended that you clear the browser cache first and log in the router again.

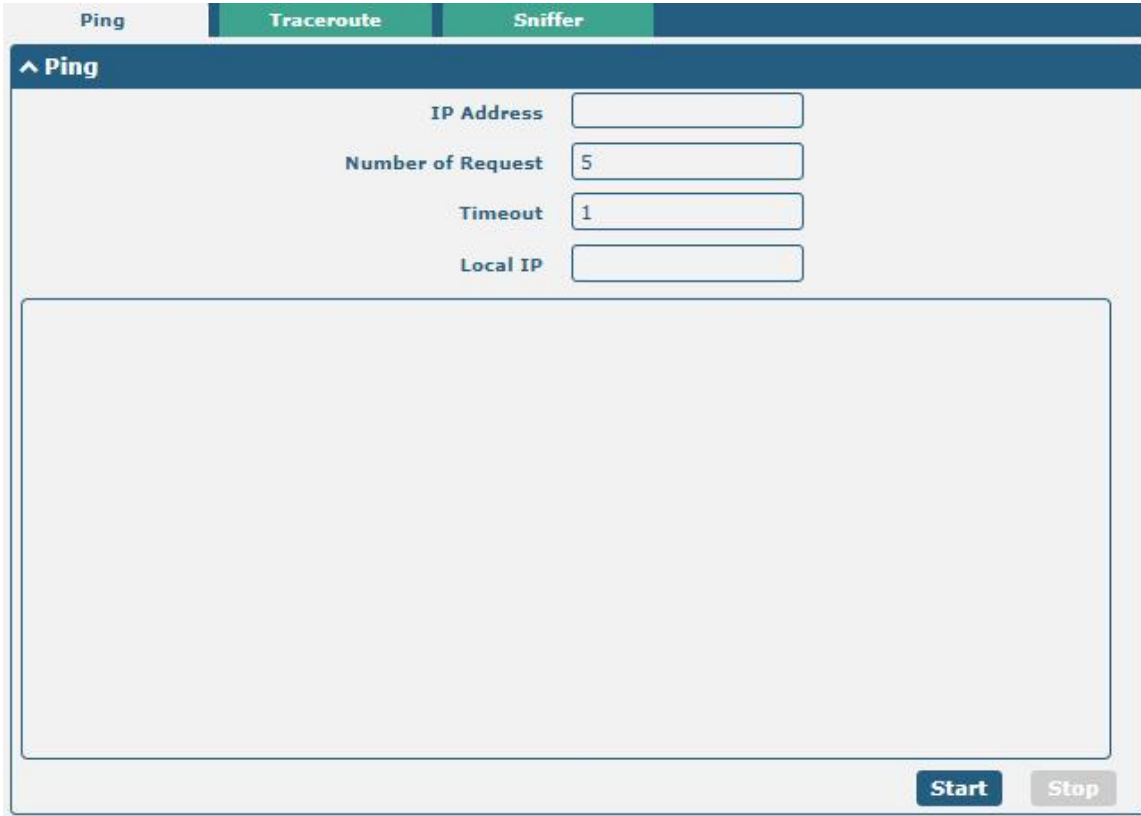

Successfully installed apps will be displayed in the following list, click **X** to uninstall the app.

App Center		
Item	Description	Default
App Install		
File	Click on “Choose File” to locate the App file from your computer, and then click Install to import this file into your router. Note: File format should be <i>xxx.rpk</i> , e.g. <i>R1511-robustlink-1.0.0.rpk</i> .	--

4.6.4 Tools

This section provides users three tools: Ping, Traceroute and Sniffer. The Ping tool is used to detect the network connectivity of the router.

Ping		
Item	Description	Default
IP address	Enter the ping's destination IP address or destination domain.	Null
Number of Requests	Specify the number of ping requests.	5
Timeout	Specify the timeout of ping request.	1
Local IP	Specify the local IP from cellular WAN, Ethernet WAN or Ethernet LAN. Null stands for selecting local IP address from these three automatically.	Null
	Click this button to start ping request, and the log will be displayed in the follow box.	--
	Click this button to stop ping request.	--

Ping
Traceroute
Sniffer

^ Traceroute

Trace Address

Trace Hops

Trace Timeout

Index	File Name	File Size	Modification Time	
1	19-09-11_21-18-43.cap	52420	Wed Sep 11 21:18:54 2019	

Sniffer		
Item	Description	Default
Interface	Choose the interface according to your Ethernet configuration.	All
Host	Filter the packet that contain the specify IP address.	Null
Packets Request	Set the packet number that the router can sniffer at a time.	1000
Protocol	Select from "All", "IP", "TCP", "UDP" and "ARP".	All
Status	Show the current status of sniffer.	--
	Click this button to start the sniffer.	--
	Click this button to stop the sniffer. Once you click this button, a new log file will be displayed in the following List.	--
Capture Files	Every times of sniffer log will be saved automatically as a new file. You can find the file from this Sniffer Traffic Data List and click to download the log, click to delete the log file. It can cache a maximum of 5 files.	--

4.6.5 Profile

This section allows you to import or export the configuration file, and restore the router to factory default setting.

Profile

Save as a Rollbackable Archive	Create a save point manually. Additionally, the system will create a save point every day automatically if configuration changes.	--
Configuration Archive Files		
Configuration Archive Files	View the related information about configuration archive files, including name, size and modification time.	--

4.6.6 User Management

This section allows you to change your username and password, and create or manage user accounts. One router has only one super user who has the highest authority to modify, add and manage other common users.

Note: Your new password must be more than 5 character and less than 32 characters and may contain numbers, upper and lowercase letters, and standard symbols.

The screenshot shows the 'Super User Settings' form. At the top, there are two tabs: 'Super User' and 'Common User', with 'Common User' selected. Below the tabs is a header for 'Super User Settings' with a help icon. The form contains four input fields: 'New Username', 'Old Password', 'New Password', and 'Confirm Password', each with a help icon to its right.

Super User Settings		
Item	Description	Default
New Username	Enter a new username you want to create, if you do not want to change username, leave it blank. 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null
Old Password	Enter the old password of your router. The default is "admin", 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null
New Password	Enter a new password you want to create, 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null
Confirm Password	Enter the new password again to confirm.	Null

The screenshot shows the 'Common User Settings' section. At the top, there are two tabs: 'Super User' and 'Common User', with 'Common User' selected. Below the tabs is a header for 'Common User Settings' with a help icon. Underneath is a table with columns 'Index', 'Role', and 'Username'. A '+' button is located at the bottom right of the table.

Click **+** button to add a new common user. The maximum rule count is 5.

The screenshot shows the 'Common Users Settings' form. At the top, there are two tabs: 'Super User' and 'Common User', with 'Common User' selected. Below the tabs is a header for 'Common Users Settings' with a help icon. The form contains four input fields: 'Index' (with value 1), 'Role' (with dropdown menu showing 'Visitor'), 'Username', and 'Password', each with a help icon to its right.

Common User Settings		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Role	Select from "Visitor" and "Editor". <ul style="list-style-type: none"> • Visitor: Users only can view the configuration of router under this level • Editor: Users can view and set the configuration of router under this level 	Visitor
Username	Set the Username, 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null
Password	Set the password, 5-32 characters, valid characters: a-z, A-Z, 0-9, @, #, \$, ., *, !, -	Null

4.7 Edge2Cloud

4.7.1 Edge2Cloud

Edge2Cloud (E2C) is a series of software collections running in the ROS operating system embedded in the Robustel Smart Gateway device, which can provide various functions of the IoT Gateway at the hardware and software levels and solve the problem of data interfacing between traditional industrial device and the cloud platform.

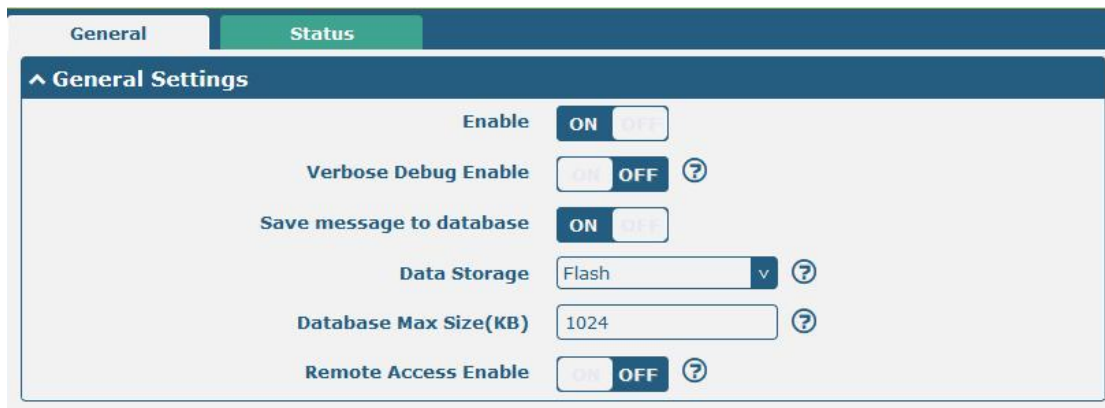

There are three types of E2C: Southbound APP, Northbound APP and Broker.

The latest ROS firmware has integrated E2C Broker, users can use the full functionality of E2C by choosing to install the corresponding Southbound APP and Northbound APP according to their needs.

4.7.2 E2C Broker

This section is used to set E2C Broker parameters and view the operational status of E2C Broker. Click "**Edge2Cloud > E2C Broker**" to display the following.

E2C Broker Settings		
Item	Descriptions	Default
General Settings		
Enable	Enable or disable E2C Broker	OFF
Verbose Debug Enable	Enable or disable more detailed verbose debug	OFF
Save message to database	Whether the messages received by Broker are saved to the database.	ON
Data Storage	Database file storage area, optional: RAM, FLASH, SD-Card and USB-Storage.	FLASH
Database Max Size (kB)	The maximum size of the database file, in KB.	1024
Remote Access Enable	Whether to support sending and receiving messages through the web interface.	OFF

E2C Broker Status	
Item	Descriptions
Status	
Receive message count	The number of MQ messages received by Broker.
Send message count	Debugging of MQ messages sent by Broker.

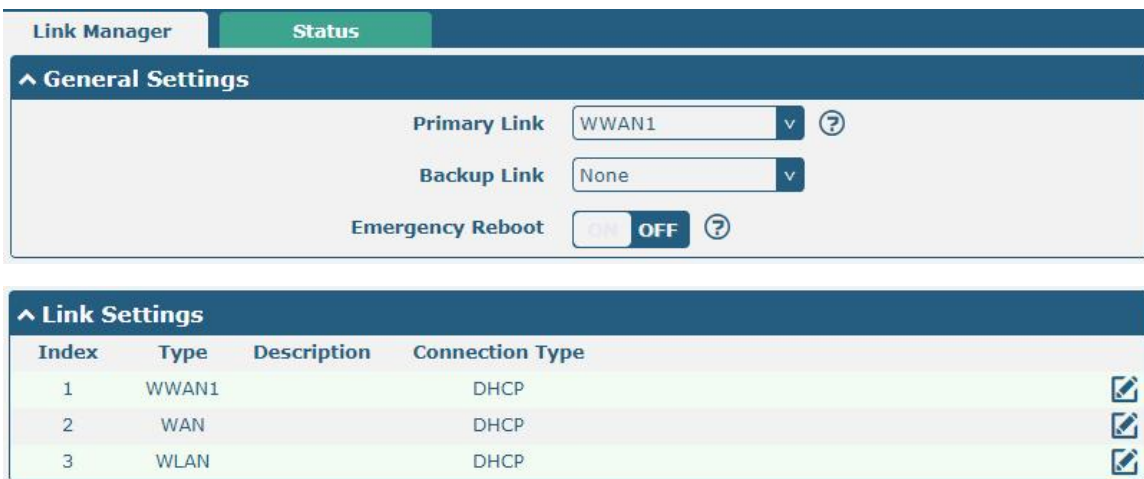

E2C Broker Status	
Item	Descriptions
Database status	Available means that the database is available and Space exceed means that the database capacity has reached the set maximum.
Messages	
App	Edge2Cloud southbound and northbound app name.
Receive	The number of messages received from the application.
Send	The number of messages sent to the reapplication.

Chapter 5 Configuration Examples

5.1 Cellular

5.1.1 Cellular Dial-Up

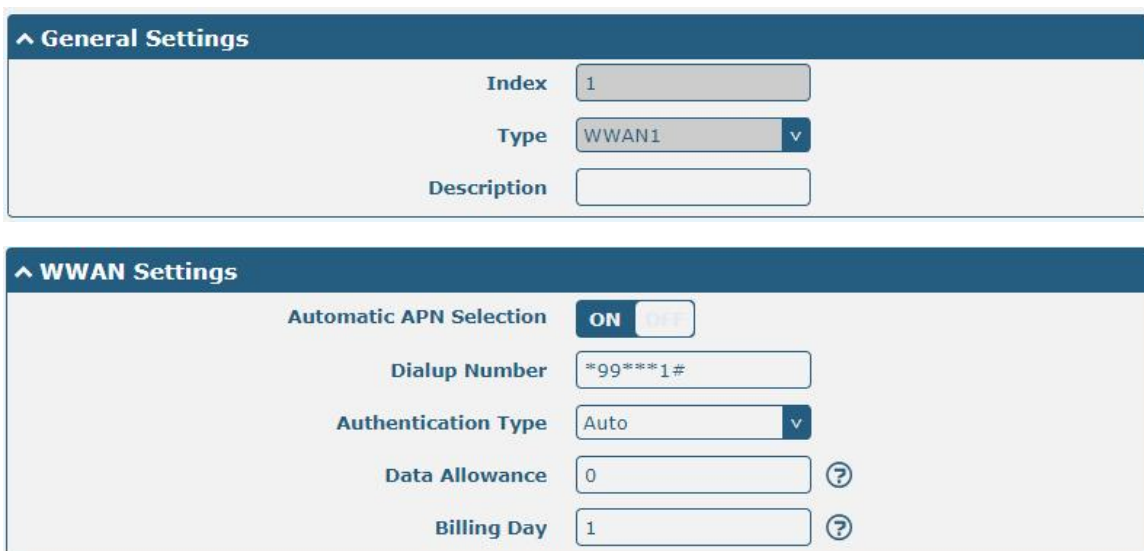

This section shows you how to configure the primary and backup SIM card for Cellular Dial-up. Connect the router correctly and insert two SIM, then open the configuration page. Under the homepage menu, click **Interface > Link Manager > Link Manager > General Settings**, choose “WWAN1” as the primary link and “None” as the backup link, then click “Submit”.

The screenshot shows the Link Manager configuration page. The 'Status' tab is active. Under 'General Settings', the Primary Link is set to 'WWAN1', the Backup Link is set to 'None', and Emergency Reboot is set to 'OFF'. Under 'Link Settings', a table lists three links:

Index	Type	Description	Connection Type	
1	WWAN1		DHCP	
2	WAN		DHCP	
3	WLAN		DHCP	

Click the right most of edit button  of WWAN1 to set its parameters according to the current ISP.

The screenshot shows the configuration page for WWAN1. Under 'General Settings', the Index is 1, Type is WWAN1, and Description is empty. Under 'WWAN Settings', Automatic APN Selection is ON, Dialup Number is *99***1#, Authentication Type is Auto, Data Allowance is 0, and Billing Day is 1.

When finished, click **Submit > Save & Apply** for the configuration to take effect.

5.1.2 SMS Remote Control

The router supports remote control via SMS. You can use following commands to get the status of the router, and set all the parameters.

There are three authentication types for SMS control. You can select from "Password", "Phonenum" or "Both".

An SMS command has the following structure:

1. Password mode—**Username:Password;cmd1;cmd2;cmd3;...cmdn** (available for every phone number).
2. Phonenum mode--**cmd1;cmd2;cmd3;... cmdn** (available when the SMS was sent from the phone number which had been added in R1511's phone group).
3. Both mode—**Username:Password;cmd1;cmd2;cmd3;...cmdn** (available when the SMS was sent from the phone number).

Note: All command symbols must be entered in the English input half angle mode.

SMS command Explanation:

1. Password: The SMS control password defaults to the login password of the super user or the login password of the ordinary user who has read and write permissions.
2. **cmd1,cmd2,cmd3 to Cmdn**, the command format is the same as the CLI command, more details about CLI cmd please refer to **Chapter 6 Introductions for CLI**.

Note: Download the configure XML file from the configured web browser. The format of SMS control command can refer to the data of the XML file.

Go to **System > Profile > Export Configuration File**, Select export type as "complete", click **Generate** to generate the XML file and click **Export** to export the XML file.

Profile	Rollback
^ Import Configuration File	
Reset Other Settings to Default	<input type="checkbox"/> OFF <input type="checkbox"/> OFF ?
Ignore Invalid Settings	<input type="checkbox"/> ON <input type="checkbox"/> OFF ?

XML Configuration File	<input type="button" value="Generate"/>
^ Default Configuration	
Save Running Configuration as Default	<input type="button" value="Save"/> ?
Restore to Default Configuration	<input type="button" value="Restore"/>

XML command:

```
<lan>
<network max_entry_num="2">
<id>1</id>
<interface>lan0</interface>
<ip>172.16.24.24</ip>
<netmask>255.255.0.0</netmask>
<mtu>1500</mtu>
```

SMS cmd:

```
set lan network 1 interface lan0
set lan network 1 ip 172.16.24.24
set lan network 1 netmask 255.255.0.0
set lan network 1 mtu 1500
```

- The semicolon character (;) is used to separate more than one command packed in a single SMS.
- E.g.

Password mode—admin:admin;status system

In this command, username is "admin", password is "admin", The control command is status system, and the function of the command is to get the system status.

SMS received:

```
firmware_version = 3.1.5
firmware_version_full = "3.1.5 (Rev 3428)"
hardware_version = 1.0
kernel_version = 4.9.152
device_model = R1511
serial_number = ""
uptime = "0 days, 00:25:13"
system_time = "Thu Aug 20 09:42:11 2020"
```

```
ram_usage = "76M Free/128M Total"
```

admin:admin;reboot

In this command, username is “admin”, password is “admin”, and the command is to reboot the R1511 Router.

SMS received:

OK

admin:admin;set firewall remote_ssh_access false;set firewall remote_telnet_access false

In this command, username is “admin”, password is “admin”, and the command is to disable the remote_ssh and remote_telnet access.

SMS received:

OK

OK

admin:admin;set lan network 1 interface lan0;set lan network 1 ip 172.16.24.24;set lan network 1 netmask 255.255.0.0;set lan network 1 mtu 1500

In this command, username is “admin”, password is “admin”, and the commands is to configure the LAN parameter.

SMS received:

OK

OK

OK

OK

5.2 VPN Configuration Example

5.2.1 IPsec VPN

IPSec VPN sample topology (configuration of lke and SA parameters of server and client must be consistent):

IPsec VPN_Server:

Cisco 2811:

```

Router>enable
Router#config
Configuring from terminal, memory, or network [terminal]?
Enter configuration commands, one per line. End with CNTL/Z.

5.2.2 OpenVPN

OpenVPN supports two modes, including Client and P2P. Here takes P2P as an example.

The configuration of two points is as follows.

OpenVPN_Server:

Generate relevant OpenVPN certificate on the server side firstly, and refer to the following commands to configuration the Server:

```
local 202.96.1.100
mode server
port 1194
proto udp
dev tun
tun-mtu 1500
fragment 1500
ca ca.crt
cert Server01.crt
key Server01.key
dh dh1024.pem
server 10.8.0.0 255.255.255.0
ifconfig-pool-persist ipp.txt
push "route 192.168.3.0 255.255.255.0"
client-config-dir ccd
route 192.168.1.0 255.255.255.0
keepalive 10 120
cipher BF-CBC
comp-lzo
max-clients 100
persist-key
persist-tun
status openvpn-status.log
verb 3
```

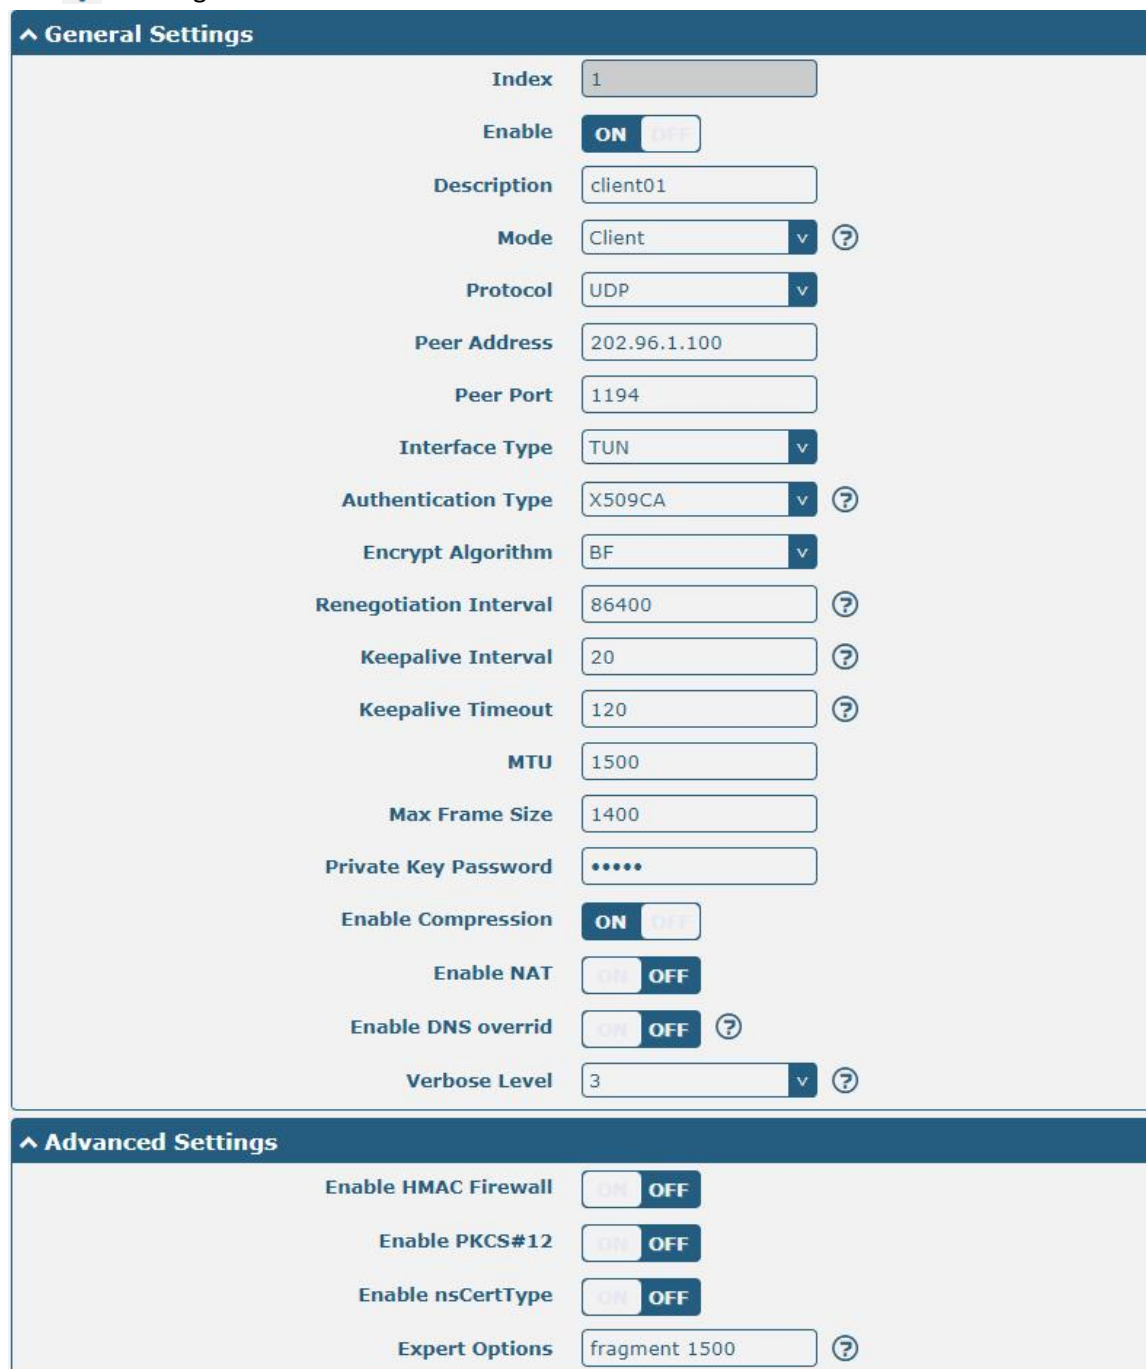

Note: For more configuration details, please contact your technical support engineer.

OpenVPN_Client:

Click **VPN > OpenVPN > OpenVPN** as below.

Click **+** to configure the Client01 as below.

OpenVPN Status x509

^ X509 Settings

Tunnel Name: Tunnel 1

Mode: Client

Root CA: Choose File No file chosen

Certificate File: Choose File No file chosen

Private Key: Choose File No file chosen

TLS-Auth Key: Choose File No file chosen

PKCS#12 Certificate: Choose File No file chosen

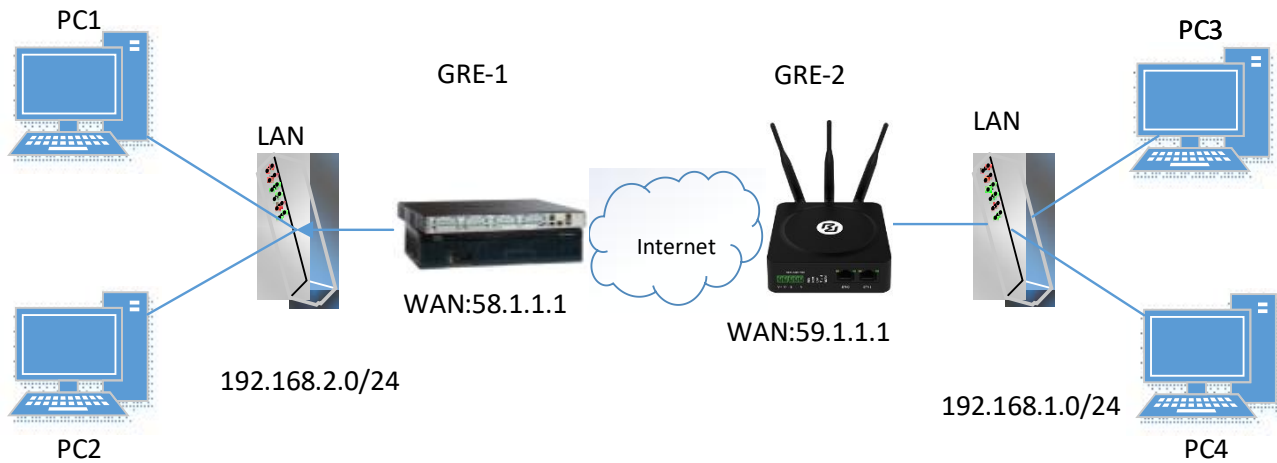

^ Certificate Files

Index	File Name	File Size	Modification Time
1	client.key	1834	Sun Jan 1 18:49:45 2017
2	client.crt	4366	Sun Jan 1 18:49:39 2017
3	ca.crt	1172	Sun Jan 1 18:49:32 2017

When finished, click **Submit > Save & Apply** for the configuration to take effect.

5.2.3 GRE VPN

GRE VPN example topology:

The configuration of two points is as follows.

GRE-1:

The window is displayed as below by clicking **VPN > GRE > GRE**.

GRE Status

^ Tunnel Settings

Index	Enable	Description	Remote IP Address
+			

Click **+** button and set the parameters of GRE-1 as below.

^ Tunnel Settings

Index	<input type="text" value="1"/>
Enable	<input checked="" type="checkbox"/> ON <input type="checkbox"/> OFF
Description	<input type="text" value="GRE-1"/>
Remote IP Address	<input type="text" value="59.1.1.1"/>
Local Virtual IP Address	<input type="text" value="10.8.0.1"/>
Local Virtual Netmask	<input type="text" value="255.255.255.0"/>
Remote Virtual IP Address	<input type="text" value="10.8.0.2"/>
Enable Default Route	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF
Enable NAT	<input type="checkbox"/> ON <input checked="" type="checkbox"/> OFF
Secrets	<input type="password" value="*****"/>
Link Binding	<input type="text" value="Unspecified"/> <input type="button" value="v"/>

When finished, click **Submit > Save & Apply** for the configuration to take effect.

GRE-2:

Click **+** button and set the parameters of GRE-2 as below.

The screenshot shows the configuration for GRE-2. The fields are: Index (1), Enable (ON), Description (GRE-2), Remote IP Address (58.1.1.1), Local Virtual IP Address (10.8.0.2), Local Virtual Netmask (255.255.255.0), Remote Virtual IP Address (10.8.0.1), Enable Default Route (OFF), Enable NAT (OFF), Secrets (*****), and Link Binding (Unspecified).

When finished, click **Submit > Save & Apply** for the configuration to take effect.

The comparison between GRE-1 and GRE-2 is as below.

The comparison shows two side-by-side screenshots of the Tunnel Settings page. The left one is for GRE-1 and the right one is for GRE-2. Red arrows and text labels point to specific fields: GRE-1 real public network IP address (59.1.1.1), GRE-1 real tunnel IP address (10.8.0.1), GRE-2 real tunnel IP address (10.8.0.2), GRE-2 real public network IP address (58.1.1.1), and a note that both use the same password (*****).

Chapter 6 Introductions for CLI

6.1 What Is CLI

The Command Line Interface (CLI) is a set of software interfaces that provide another way to configure device parameters. Users can connect to the router through SSH or telnet to configure CLI commands. After establishing a Telnet or SSH connection with the router, enter the login account and password (default admin/admin) to enter the router's configuration mode, as shown below.

```
router login: admin
Password:
#
!           Comments
add        Add a list entry of configuration
clear      Clear statistics
config     Configuration operation
debug      Output debug information to the console
del        Delete a list entry of configuration
exit       Exit from the CLI
help       Display an overview of the CLI syntax
ovpn_cert_get Download openVPN certificate file via http or ftp
ping       Send messages to network hosts
reboot     Halt and perform a cold restart
set        Set system configuration
show       Show system configuration
status     Show running system information
tftpupdate Update firmware or configuration file using tftp
traceroute Print the route packets trace to network host
trigger    Trigger action
urlupdate  Update firmware via http or ftp
ver        Show version of firmware

#
```

Router login:

Router login: admin

Password: admin

#

CLI commands:

```
# ?
!           Comments
add        Add a list entry of configuration
clear      Clear statistics
config     Configuration operation
debug      Output debug information to the console
del        Delete a list entry of configuration
exit       Exit from the CLI
help       Display an overview of the CLI syntax
```

ping	Send messages to network hosts
reboot	Halt and perform a cold restart
route	Static route modify dynamically, this setting will not be saved
set	Set system configuration
show	Show system configuration
status	Show running system information
tftpupdate	Update firmware using tftp
tracert	Print the route packets trace to network host
urlupdate	Update firmware using http or ftp
ver	Show version of firmware

6.2 How to Configure the CLI

Following is a table about the description of help and the error should be encountered in the configuring program.

Commands /tips	Description
?	<p>Typing a question mark “?” will show you the help information.</p> <p>Example:</p> <pre># config (Tick ‘?’) config Configuration operation</pre> <p># config (Tick the space key+’?’)</p> <pre>commit Save the configuration changes and take effect changed configuration save_and_apply Save the configuration changes and take effect changed configuration loaddefault Restore Factory Configuration</pre>
Ctrl+c	Tick these two keys at the same time, except its “copy” function but also can be used for “break” out of the setting program.
Syntax error: The command is not completed	Command is not completed.
Tick space key+ Tab key	<p>It can help you finish your currently incomplete commands.</p> <p>Example:</p> <pre># config (tick Enter key) Syntax error: The command is not completed</pre> <p># config (tick space key+ Tab key)</p> <pre>commit save_and_apply loaddefault</pre>
# config save_and_apply / #config commit	<p>When your setting finished, you should enter those commands to make your setting take effect on the device.</p> <p>Note: Commit and save_and_apply plays the same role.</p>

6.3 Commands Reference

Commands	Syntax	Description
Debug	<i>Debug parameters</i>	enable on or disable the debug function
Show	<i>Show parameters</i>	Show current configuration of each function
Set	<i>Set parameters</i>	All the function parameters are set by commands set and add, the difference is that set is for the single parameter and add is for the list parameter
Add	<i>Add parameters</i>	

Note: More detail about CLI command, please refer to “Command Line Interface Guide”.

6.4 Quick Start with Configuration ExampleS

The best and quickest way to master CLI is firstly to view all features from the webpage and then read all CLI commands at a time, finally learn to configure it with some reference examples.

Example 1: Show current version

```
# status system
firmware_version = 3.1.5
firmware_version_full = "3.1.5 (Rev 3428)"
hardware_version = 1.0
kernel_version = 4.9.152
device_model = R1511
serial_number = ""
uptime = "0 days, 00:45:43"
system_time = "Thu Aug 20 09:42:11 2020"
ram_usage = "78M Free/128M Total"
```

Example 2: Update firmware via tftp

```
# tftpupdate (space+?)
firmware  New firmware
config    New configuration file
# tftpupdate firmware (space+?)
filename  New file
# tftpupdate firmware filename R1511-firmware-sysupgrade-unknown.ruf host 192.168.100.99 // enter a new
firmware name
Downloading
Download success.
Upgrading
Upgrade success.          //update success
# reboot                  //make you configuration effect after reboot
Rebooting...
OK
```

Example 3: Set link-manager

```
# set
# set (space+?)
cellular      Cellular
ddns          DDNS
dido          DIDO
email         Email
```

ethernet	Ethernet
event	Event Management
firewall	Firewall
gre	GRE
ip_passthrough	IP Passthrough
ipsec	IPSec
lan	Local Area Network
link_manager	Link Manager
ntp	NTP
openvpn	OpenVPN
reboot	Automatic Reboot
route	Route
serial_port	Serial
sms	SMS
ssh	SSH
syslog	Syslog
system	System
user_management	User Management
web_server	Web Server
wifi	WiFi AP

```
# set link_manager (space+?)
```

primary_link	Primary Link
backup_link	Backup Link
backup_mode	BackSup Mode
revert_interval	Revert Interval
emergency_reboot	Emergency Reboot
link	Link Settings

```
# set link_manager primary_link (space+?)
```

```
Enum Primary Link (wwan1/wan/wlan)
```

```
# set link_manager primary_link wwan1
```

```
//select "wwan1" as primary link
```

```
OK
```

```
//setting succeed
```

```
#set link_manager link 1 (space+?)
```

type	Type
desc	Description
connection_type	Connection Type
wwan	WWAN Settings
static_addr	Static Address Settings
pppoe	PPPoE Settings
ping	Ping Settings
nat_enable	NAT Enable
mtu	MTU
weight	Weight
upload_bandwidth	Upload Bandwidth
download_bandwidth	Download Bandwidth
dns1_overrided	Overrided Primary DNS

```

dns2_overridden      Overridden Secondary DNS
debug_enable         Debug Enable
verbose_debug_enable Verbose Debug Enable
# set link_manager link 1 type wwan1
OK
# set link_manager link 1 wwan (space+?)
auto_apn             Automatic APN Selection
apn                  APN
username             Username
password             Password
dialup_number        Dialup Number
auth_type            Authentication Type
data_allowance       Data Allowance
billing_day          Billing Day
# set link_manager link 1 wwan data_allowance 100           //open cellular switch_by_data_traffic
OK                                                         //setting succeed
# set link_manager link 1 wwan billing_day 1                //setting specifies the day of month for billing
OK                                                         //setting succeed
...
# config save_and_apply
OK                                                         //save and apply current configuration, make you configuration effect

```

Example 4: Set Ethernet

```

# set Ethernet port_setting 2 port_assignment lan0         //Set Table 2 (eth1) to lan0
OK
# config save_and_apply                                     //save and apply current configuration, make you configuration effect
OK

```

Example 5: Set LAN IP address

```

# show lan all
network {
    id = 1
    interface = lan0
    ip = 192.168.0.1
    netmask = 255.255.255.0
    mtu = 1500
    dhcp {
        enable = true
        mode = server
        relay_server = ""
        pool_start = 192.168.0.2
    }
}

```

```

    pool_end = 192.168.0.100
    netmask = 255.255.255.0
    gateway = ""
    primary_dns = ""
    secondary_dns = ""
    wins_server = ""
    lease_time = 120
    static_lease = ""
    expert_options = ""
    debug_enable = false
}
vlan_id = 0
}
#
# set lan (space+?)
network      Network Settings
multi_ip     Multiple IP Address Settings
# set lan network 1(space+?)
interface   Interface
ip          IP Address
netmask     Netmask
mtu         MTU
dhcp        DHCP Settings
Vlan_id     VLAN ID
# set lan network 1 interface lan0
OK
# set lan network 1 ip 172.16.24.24           // set IP address for lan
OK                                           // setting succeed
# set lan network 1 netmask 255.255.0.0
OK
#
...
# config save_and_apply
OK                                           // save and apply current configuration, make you configuration effect

```

Example 6: CLI for setting Cellular

```

# show cellular all
sim {
    id = 1
    card = sim1
    phone_number = ""
    pin_code = ""
    extra_at_cmd = ""
    telnet_port = 0

```

```

network_type = auto
band_select_type = all
band_settings {
    gsm_850 = false
    gsm_900 = false
    gsm_1800 = false
    gsm_1900 = false
    wcdma_800 = false
    wcdma_850 = false
    wcdma_900 = false
    wcdma_1900 = false
    wcdma_2100 = false
    wcdma_1700 = false
    wcdma_band19 = false
    lte_band1 = false
    lte_band2 = false
    lte_band3 = false
    lte_band4 = false
    lte_band5 = false
    lte_band7 = false
    lte_band8 = false
    lte_band13 = false
    lte_band17 = false
    lte_band18 = false
    lte_band19 = false
    lte_band20 = false
    lte_band21 = false
    lte_band25 = false
    lte_band28 = false
    lte_band31 = false
    lte_band38 = false
    lte_band39 = false
    lte_band40 = false
    lte_band41 = false
}
telit_band_settings {
    gsm_band = 900_and_1800
    wcdma_band = 1900
}
debug_enable = true
verbose_debug_enable = false
}
# set(space+space)
cellular      ddns      dido      email      ethernet
event         firewall  gre       ip_passthrough  ipsec
l2tp          lan       link_manager  ntp        openvpn

```

```

pptp          reboot          route          serial_port    sms
ssh           syslog           system        user_management web_server    wifi
# set cellular(space+?)
  sim  SIM Settings
# set cellular sim(space+?)
  Integer  Index (1..1)

# set cellular sim 1(space+?)
  card                SIM Card
  phone_number        Phone Number
  pin_code            PIN Code
  extra_at_cmd        Extra AT Cmd
  telnet_port         Telnet Port
  network_type        Network Type
  band_select_type    Band Select Type
  band_settings       Band Settings
  telit_band_settings Band Settings
  debug_enable        Debug Enable
  verbose_debug_enable Verbose Debug Enable
# set cellular sim 1 phone_number 18620435279
OK
...
# config save_and_apply
OK //save and apply current configuration, make you configuration eff

```

Glossary

Abbr.	Description
AC	Alternating Current
APN	Access Point Name of GPRS Service Provider Network
ASCII	American Standard Code for Information Interchange
CE	Conformité Européene (European Conformity)
CHAP	Challenge Handshake Authentication Protocol
CLI	Command Line Interface for batch scripting
CSD	Circuit Switched Data
CTS	Clear to Send
dB	Decibel
dBi	Decibel Relative to an Isotropic radiator
DC	Direct Current
DCD	Data Carrier Detect
DCE	Data Communication Equipment (typically modems)
DCS 1800	Digital Cellular System, also referred to as PCN
DI	Digital Input
DO	Digital Output
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTMF	Dual Tone Multi-frequency
DTR	Data Terminal Ready
EDGE	Enhanced Data rates for Global Evolution of GSM and IS-136
EMC	Electromagnetic Compatibility
EMI	Electro-Magnetic Interference
ESD	Electrostatic Discharges
ETSI	European Telecommunications Standards Institute
EDGE	Enhanced Data rates for Global Evolution of GSM and IS-136
FDD LTE	Frequency Division Duplexing Long Term Evolution
GND	Ground
GPRS	General Packet Radio Service
GRE	generic route encapsulation
GSM	Global System for Mobile Communications
HSPA	High Speed Packet Access
ID	identification data
IMEI	International Mobile Equipment Identification
IP	Internet Protocol
IPSec	Internet Protocol Security
kbps	kbits per second
L2TP	Layer 2 Tunneling Protocol

Abbr.	Description
LAN	local area network
LED	Light Emitting Diode
M2M	Machine to Machine
MAX	Maximum
Min	Minimum
MO	Mobile Originated
MS	Mobile Station
MT	Mobile Terminated
OpenVPN	Open Virtual Private Network
PAP	Password Authentication Protocol
PC	Personal Computer
PCN	Personal Communications Network, also referred to as DCS 1800
PCS	Personal Communication System, also referred to as GSM 1900
PDU	Protocol Data Unit
PIN	Personal Identity Number
PLCs	Program Logic Control System
PPP	Point-to-point Protocol
PPTP	Point to Point Tunneling Protocol
PSU	Power Supply Unit
PUK	Personal Unblocking Key
R&TTE	Radio and Telecommunication Terminal Equipment
RF	Radio Frequency
RTS	Request to Send
RTU	Remote Terminal Unit
Rx	Receive Direction
SDK	Software Development Kit
SIM	subscriber identification module
SMA antenna	Stubby antenna or Magnet antenna
SMS	Short Message Service
SNMP	Simple Network Management Protocol
TCP/IP	Transmission Control Protocol / Internet Protocol
TE	Terminal Equipment, also referred to as DTE
Tx	Transmit Direction
UART	Universal Asynchronous Receiver-transmitter
UMTS	Universal Mobile Telecommunications System
USB	Universal Serial Bus
USSD	Unstructured Supplementary Service Data
VDC	Volts Direct Current
VLAN	Virtual Local Area Network
VPN	Virtual Private Network
VSWR	Voltage Stationary Wave Ratio

Abbr.	Description
WAN	Wide Area Network
