Important Notice

Due to the nature of wireless communications, transmission and reception of data can never be guaranteed. Data may be delayed, corrupted (i.e., have errors) or be totally lost. Although significant delays or losses of data are rare when wireless devices such as the router is used in a normal manner with a well-constructed network, the router should not be used in situations where failure to transmit or receive data could result in damage of any kind to the user or any other party, including but not limited to personal injury, death, or loss of property. Robustel accepts no responsibility for damages of any kind resulting from delays or errors in data transmitted or received using the router, or for failure of the router to transmit or receive such data.

Safety Precautions

General

- The router generates radio frequency (RF) power. When using the router, care must be taken on safety issues related to RF interference as well as regulations of RF equipment.
- Do not use your router in aircraft, hospitals, petrol stations or in places where using cellular products is prohibited.
- Be sure that the router will not be interfering with nearby equipment. For example: pacemakers or medical equipment. The antenna of the router should be away from computers, office equipment, home appliance, etc.
- An external antenna must be connected to the router for proper operation. Only uses approved antenna with the router. Please contact authorized distributor on finding an approved antenna.
- Always keep the antenna with minimum safety distance of 20 cm or more from human body. Do not put the antenna inside metallic box, containers, etc.
- When used, the device needs a suitable environment.
 1. If indoors, it needs to be provided an indoor enclosure.
 2. If outdoors, it needs to be provided a rain proof enclosure.
- RF exposure statements
 1. For mobile devices without co-location (the transmitting antenna is installed or located more than 20cm away from the body of user and nearby person)
- FCC RF Radiation Exposure Statement
 1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
 2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and human body.

Note: Some airlines may permit the use of cellular phones while the aircraft is on the ground and the door is open. Router may be used at this time.

Using the Router in Vehicle

- Check for any regulation or law authorizing the use of cellular devices in vehicle in local country before installing the router.
- The driver or operator of any vehicle should not operate the router while driving.
- Install the router by qualified personnel. Consult your vehicle distributor for any possible interference of electronic parts by the router.
- The router should be connected to the vehicle's supply system by using a fuse-protected terminal in the vehicle's fuse box.
- Be careful when the router is powered by the vehicle's main battery. The battery may be drained after extended period.

Protecting Your Router

To ensure error-free usage, please install and operate your router with care. Do remember the following:

- Do not expose the router to extreme conditions such as high humidity / rain, high temperature, direct sunlight, caustic / harsh chemicals, dust, or water.
- Do not try to disassemble or modify the router. There is no user serviceable part inside and the warranty would be void.
- Do not drop, hit or shake the router. Do not use the router under extreme vibrating conditions.
- Do not pull the antenna or power supply cable. Attach/detach by holding the connector.
- Connect the router only according to the instruction manual. Failure to do it will void the warranty.
- In case of problem, please contact authorized distributor.

Regulatory and Type Approval Information

Table 1: Directives

2011/65/EU	<p>The European RoHS2.0 2011/65/EU Directive was issued by the European parliament and the European Council on 1 July 2011 on the restriction of the use of certain Hazardous substances in electrical and electronic equipment.</p> <p>On June 4, 2015, the Official Journal of the European Union published the RoHS2.0 Amendment Directive (EU)</p> <p>In 2015/863, four phthalates (DEHP, BBP, DBP, DIBP) were officially included in the list of restricted substances in Appendix II of RoHS 2.0 (2011/65/EU).</p> <p>From July 22, 2019, all electronic and electrical products exported to Europe (except medical and monitoring equipment) must meet this restriction; from July 22, 2021, medical equipment and monitoring equipment will also be included in the scope of control.</p>	
2012/19/EU	<p>The European WEEE 2012/19/EU Directive was issued by the European parliament and the European Council on 24 July 2012 on waste electrical and electronic equipment.</p>	
2013/56/EU	<p>The European 2013/56/EU Directive is a battery Directive which published in the EU official gazette on 10 December 2013. The button battery used in this product conforms to the standard of 2013/56/EU directive.</p>	

Table 2: Toxic or Hazardous Substances or Elements with Defined Concentration Limits

Name of the Part	Hazardous Substances									
	(Pb)	(Hg)	(Cd)	(Cr(VI))	(PBB)	(PBDE)	(DEHP)	(BBP)	(DBP)	(DIBP)
Metal parts	o	o	o	o	-	-	-	-	-	-
Circuit modules	o	o	o	o	o	o	o	o	o	o
Cables and cable assemblies	o	o	o	o	o	o	o	o	o	o
Plastic and polymeric parts	o	o	o	o	o	o	o	o	o	o

o:
 Indicates that this toxic or hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement in RoHS2.0.
X:
 Indicates that this toxic or hazardous substance contained in at least one of the homogeneous materials for this part *might exceed* the limit requirement in RoHS2.0.
-:
 Indicates that it does not contain the toxic or hazardous substance.

Chapter 1 Product Overview

1.1 Key Features

The Robustel Industrial Dual SIM Cellular VPN Router (R3000) is a rugged cellular router offering state-of-the-art mobile connectivity for machine to machine (M2M) applications.

R3000 is a powerful router developed from RobustOS, a Robustel self-developed and Linux-based operating system which is designed to be used in Robustel devices. The RobustOS includes basic networking features and protocols providing customers with a very good user experience. Meanwhile, Robustel offers a Software Development Kit (SDK) for partners and customers to allow additional customization by using C, C++. It also provides rich Apps to meet fragmented IoT market demands.

1.2 Package Contents

Before installing your R3000 Router, verify the kit contents as following.

Note: The following pictures are for illustration purposes only, not based on their actual sizes.

- 1 x Robustel R3000 Industrial Dual SIM Cellular VPN Router (GPS/WiFi optional)

With WiFi and GPS

Only with GPS

Only with WiFi

Without WiFi and GPS

- 1 x 3-pin 5 mm male terminal block with lock for power supply

- 1 x 7-pin 3.5 mm male terminal block with lock for serial port, I/O and console port

- 1 x *Quick Start Guide* with download link of other documents or tools

Note: If any of the above items is missing or damaged, please contact your Robustel sales representative.

Optional Accessories (sold separately):

- 3G/4G SMA cellular antenna (stubby/magnet optional)

Stubby antenna

Magnet antenna

- RP-SMA WiFi antenna (stubby/magnet optional)

Stubby antenna

Magnet antenna

- Wall mounting kit

- 35 mm DIN rail mounting kit

- Ethernet cable

- AC/DC power adapter (12V DC, 1.5 A; EU/US/UK/AU plug optional)

欧洲

美国

英国

澳大利亚

1.3 Specifications

Cellular Interface

- Number of antennas: 2 (MAIN + AUX)
- Connector: SMA-K
- SIM: 2 (3.0 V & 1.8 V)
- Standards: GSM/GPRS/EDGE/WCDMA/HSDPA/HSUPA/HSPA+/DC-HSPA+/TD-SCDMA/CDMA (CDMA 1X/EVDO)/FDD LTE/TDD LTE
GSM: max DL/UL = 9.6/2.7 Kbps
GPRS: max DL/UL = 86 Kbps

EDGE: max DL/UL = 236.8 Kbps
 WCDMA/TD-SCDMA: max DL/UL = 2.8 Mbps/384 Kbps
 EVDO: max DL/UL = 5.4 Mbps/14.7 Kbps
 HSPA+: max DL/UL = 21/5.76 Mbps, fallback to 2G
 DC-HSPA+: max DL/UL = 42/5.76 Mbps, fallback to 2G
 FDD LTE: max DL/UL = 100/50 Mbps, fallback to 2G/3G
 TDD LTE: max DL/UL = 100/50 Mbps, fallback to 2G/3G

Ethernet Interface

- Number of ports: 2 x 10/100 Mbps, 2 x LAN or 1 x LAN + 1 x WAN
- Magnet isolation protection: 1.5 KV

WiFi Interface (Optional)

- Number of antennas: 1
- Connector: RP-SMA-K
- Standards: 802.11a/b/g/n, supporting AP and Client modes
- Frequency bands: 2.4 GHz
5 GHz
- Security: Open, WPA, WPA2, WEP
- Encryption: AES, TKIP, WEP64
- Data speed: Up to 150 Mbps
- Receiving sensitivity: 1 M -97 dBm (< 8% PER)
 (+/- 1 dBm) 54 Mbps -76.5 dBm (< 10% PER)
 MCS7 (20 MHz) -72 dBm (< 10% PER)
 MCS7 (40 MHz) -69 dBm (< 10% PER)

GPS/GLONASS Interface (Optional)

- Number of antennas: 1
- Connector: SMA female with 50 ohms impedance
- Tracking sensitivity: GPS: greater than -148 dBm
GLONASS: greater than -140 dBm
- Horizontal position accuracy: GPS: 2.5 m
GLONASS: 4.0 m
- Protocol: NMEA-0183 V2.3

Serial Interface

- Number of ports: 1 x RS232 and 1 x RS485, The hardware is configurable as 2 x RS485 or 2 x RS232
- Connector: 7-pin 3.5 mm female socket with lock
- ESD protection: ± 15 KV
- Baud rate: 300 bps to 230400 bps
- Parameters: 8E1, 8O1, 8N1, 8N2, 7E2, 7O2, 7N2, 7E1
- Signal definition: RS232: TxD, RxD, RTS, CTS, GND
RS485: Data+ (A), Data- (B)

DI/DO

- Type: 2 x DI (dry contact) + 2 x DO (wet contact), 4 x DI, 4 x DO, 3 x DI + 1 x DO or 3 x DO + 1 x DI
- Connector: 7-pin 3.5 mm female socket with lock
- Isolation: 3KVDC or 2KVrms
- Absolute maximum VDC: “V+” +5V DC (DI), 30V DC (DO)
- Absolute maximum ADC: 300 mA

Others

- 1 x RST button
- 1 x Micro SD interface
- 1 x USB 2.0 host up to 480 Mbps
- 1 x CLI interface
- LED indicators - 1 x RUN, 1 x PPP, 1 x USR, 1 x RSSI, 1 x NET, 1 x SIM

Power Supply and Consumption

- Connector: 3-pin 5 mm female socket with lock
- Input voltage: 9 to 60V DC
- Power consumption: Idle: 100 mA@12 V;Data link: 400 mA (peak) @12 V

Physical Characteristics

- Ingress protection: IP30
- Housing & Weight: Metal, 570 g
- Dimensions: 125 x 104 x 43.5 mm
- Installations: Desktop, wall mounting or 35 mm DIN rail mounting
- Operating temperature: -40~+75°C
- Storage temperature: -40~+85°C
- Relative humidity: 5~95%RH

1.4 Dimensions

1.5 Warning

WARNING – EXPLOSION HAZARD. DO NOT REMOVE OR REPLACE WHILE CIRCUIT IS LIVE UNLESS THE AREA IS FREE OF IGNITIBLE CONCENTRATIONS.

AVERTISSEMENT — RISQUE D'EXPLOSION. NE PAS RETIRER OU REMPLACER LORSQUE LE CIRCUIT EST SOUS TENSION, À MOINS QUE LE MILIEU SOIT LIBRE DE SUBSTANCES INFLAMMABLES CONCENTRÉES.

Chapter 2 Hardware Installation

2.1 PIN Assignment

PIN	Debug	RS-232	Direction
1	CR	--	R3000 ← Device
2	CT	--	R3000 → Device
3	GND	GND	--
4	--	TXD	R3000 → Device
5	--	RXD	R3000 ← Device
6	--	RTS	R3000 → Device
7	--	CTS	R3000 ← Device

Note: When the device is configured as 2*RS-485, the pin is defined as follows:

PIN	Debug	RS-485	Direction
4	--	Data+(A)	R3000 → Device
5	--	Data- (B)	R3000 ← Device

PIN	Power
8	Positive
9	Negative
10	GND

PIN	DI/DO	RS-485	Direction
11	Input 1	--	R3000 ← Device
12	Input 2	--	R3000 ← Device
13	Output 1	--	R3000 → Device
14	Output 2	--	R3000 → Device
15	GND	--	--
16	--	Data+(A)	R3000 ↔ Device
17	--	Data- (B)	R3000 ↔ Device

PIN	DI/DO	RS-232	Direction
11	Input 1	--	R3000 ← Device
12	Input 2	--	R3000 ← Device
13	Output 1	--	R3000 → Device
14	Output 2	--	R3000 → Device
15	IO_GND	--	--
16	--	TXD	R3000 ↔ Device
17	--	RXD	R3000 ↔ Device
3	--	GND	--

Note: When PIN16/PIN17 is configured as RS-232, the GND of RS-232 should be connected to PIN3.

2.2 LED Indicators

Name	Color	Status	Description
RUN	Green	On, fast blinking (250 mSec blink time)	Router is powered on (System is initializing)
		On, blinking (500 mSec blink time)	Router starts operating
		Off	Router is powered off
PPP	Green	On, solid	Link connection is working
		Off	Link connection is not working
USR-OpenVPN	Green	On, solid	OpenVPN connection is established
		Off	OpenVPN connection is not established
USR-IPsec	Green	On, solid	IPsec connection is established
		Off	IPsec connection is not established
USR-WiFi	Green	On, solid	WiFi is enabled and working properly
		Off	WiFi is disabled or not working properly
	Green	On, solid	High Signal strength (21-31) is available
	Yellow	On, solid	Medium Signal strength (11-20) is available
	Red	On, solid	Low Signal strength (1-10) is available
	--	Off	No signal
NET	Green	On, solid	Connection to 4G network is established
	Yellow	On, solid	Connection to 3G network is established

	Red	On, solid	Connection to 2G network is established
	--	Off	Connection to network is not established or establishing
SIM	Green	On, solid	Main card is being used
		On, blinking	Backup card is being used
		Off	NO SIM card

Note: You can choose the display type of USR LED. For more details, please refer to **3.29 Service > Advanced**.

2.3 USB Interface

Function	Operation
Firmware upgrade	USB interface is used for batch firmware upgrading, but cannot be used for sending or receiving data from slave devices which connected to it. You can insert a USB storage device into the router's USB interface, such as a U disk or a hard disk. If there have a supported configuration file or a router firmware in this USB storage device, the router will automatically update the configuration file or the firmware. For more details, see 3.11 Interface > USB .

2.4 Reset Button

Function	Operation
Reboot	Press and hold the RST button for at least 5 seconds under the operating status.
Restore to factory default settings	Wait for 5 seconds after powering up the router, press and hold the RST button until all six LEDs start blinking one by one, and release the button to return the router to factory defaults.

2.5 Ethernet Ports

There are two Ethernet ports on R3000 Router, including ETH0 and ETH1. Each Ethernet port has two LED indicators. The yellow one is a link indicator, while the green one is a speed indicator. For details about status, see the table below.

Indicator	Status	Description
Link indicator	On, solid	Connection is established
	On, blinking	Data is being transferred
	Off	Connection is not established
Speed indicator	On, solid	100 Mbps mode
	Off	10 Mbps mode

2.6 Insert or Remove SIM Card/Micro SD Card

Insert or remove the SIM/Micro SD card as shown in the following steps.

- **Insert SIM card/Micro SD card**

1. Make sure router is powered off.
2. To remove slot cover, loosen the screws associated with the cover by using a screwdriver and then find the SIM card slot/SD card slot.
3. To insert SIM card/Micro SD card, press the card with finger until you hear a click and then tighten the screws associated with the cover by using a screwdriver.
4. To put back the cover and tighten the screws associated with the cover by using a screwdriver.

- **Remove SIM card/Micro SD card**

1. Make sure router is powered off.
2. To remove slot cover, loosen the screws associated with the cover by using a screwdriver and then find the SIM card slot/SD card slot.
3. To remove SIM card/Micro SD card, press the card with finger until it pops out and then take out the card.
4. To put back the cover and tighten the screws associated with the cover by using a screwdriver.

Note:

1. Recommended torque for inserting is 0.5 N.m, and the maximum allowed is 0.7 N.m.
2. Use the specific card when the device is working in extreme temperature (temperature exceeding 40 °C), because the regular card for long-time working in harsh environment will be disconnected frequently.
3. Do not forget to twist the cover tightly to avoid being stolen.
4. Do not touch the metal of the card surface in case information in the card will lose or be destroyed.
5. Do not bend or scratch the card.

Use 3 pcs of M3*4 flat head Phillips screws to fix the wall mounting kit to the router, and then use 2 pcs of M3 drywall screws to mount the router associated with the wall mounting kit on the wall.

Note: Recommended torque for mounting is 1.0 N.m, and the maximum allowed is 1.2 N.m.

2. DIN rail mounting (measured in mm)

Use 3 pcs of M3*6 flat head Phillips screws to fix the DIN rail to the router, and then hang the DIN rail on the mounting bracket. It is necessary to choose a standard bracket.

Note: Recommended torque for mounting is 1.0 N.m, and the maximum allowed is 1.2 N.m.

2.9 Ground the Router

Router grounding helps prevent the noise effect due to electromagnetic interference (EMI). Connect the router to the site ground wire by the ground screw before powering on.

Note: This product is appropriate to be mounted on a sound grounded device surface, such as a metal panel.

2.10 Connect the Router to a Computer

Connect an Ethernet cable to the port marked ETH0 or ETH1 at the front of the R3000 Router, and connect the other end of the cable to your computer.

2.11 Power Supply

CONNECTING THE POWER CABLE

R3000 Router supports reverse polarity protection, but always refers to the figure above to connect the power adapter correctly. There are two cables associated with the power adapter. Following to the color of the head, connect the cable marked red to the positive pole through a terminal block, and connect the yellow one to the negative in the same way. The last step is to plug the power adapter into your socket.

Note: The range of power voltage is 9 to 60V DC.

Chapter 3 Initial Configuration

The router can be configured through your web browser that including IE 8.0 or above, Chrome and Firefox, etc. A web browser is included as a standard application in the following operating systems: Linux, Mac OS, Windows 98/NT/2000/XP/Me/Vista/7/8, etc. It provides an easy and user-friendly interface for configuration. There are various ways to connect the router, either through an external repeater/hub or connect directly to your PC. However, make sure that your PC has an Ethernet interface properly installed prior to connecting the router. You must configure your PC to obtain an IP address through a DHCP server or a fixed IP address that must be in the same subnet as the router. If you encounter any problems accessing the router web interface, it is advisable to uninstall your firewall program on your PC, as this tends to cause problems accessing the IP address of the router.

3.1 Configure the PC

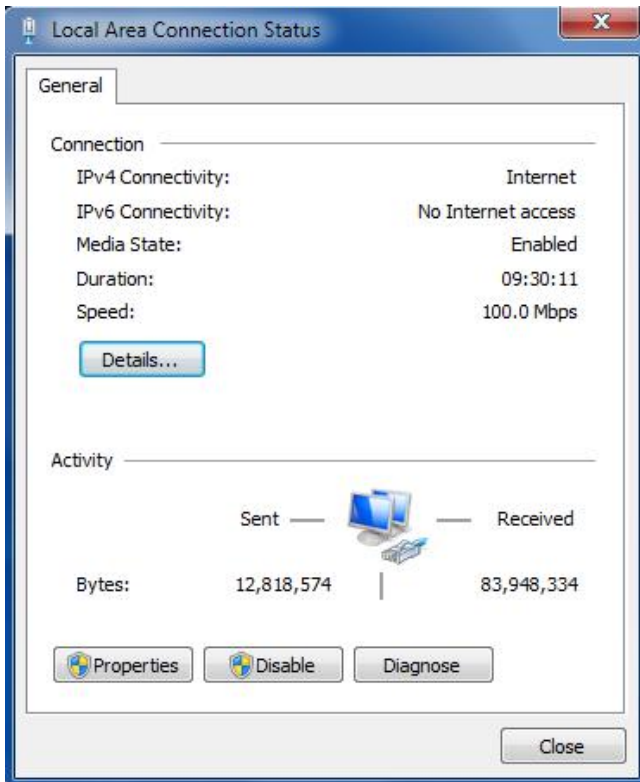

There are two methods to get IP address for the PC. One is to obtain an IP address automatically from “Local Area Connection”, and another is to configure a static IP address manually within the same subnet of the router. Please refer to the steps below.

Here take **Windows 7** as example, and the configuration for windows system is similar.

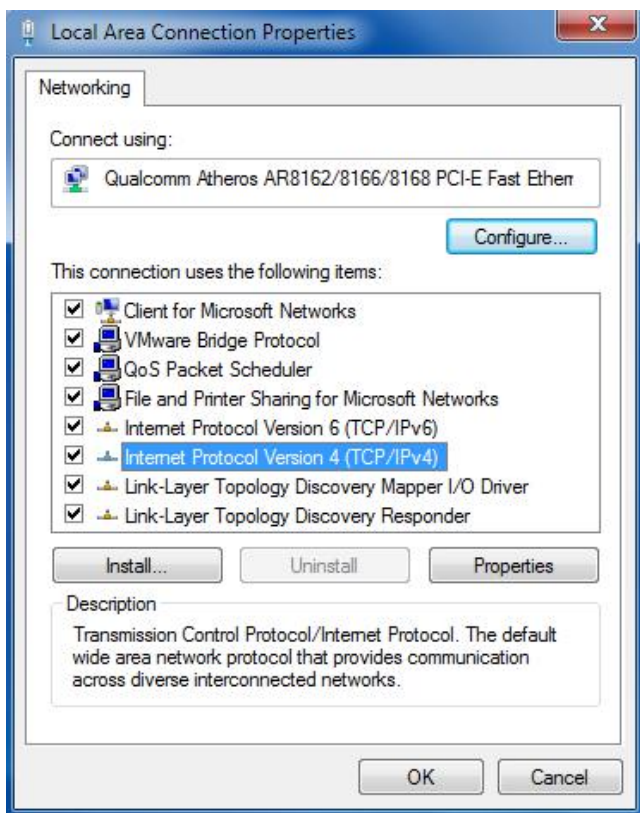

1. Click **Start > Control panel**, double-click **Network and Sharing Center**, and then double-click **Local Area Connection**.

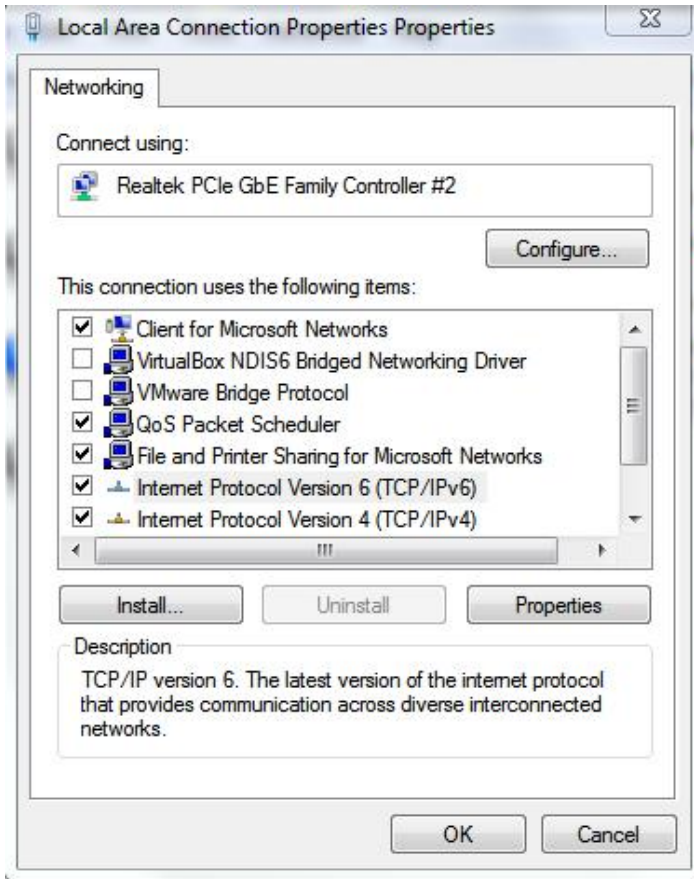

2. Click **Properties** in the window of **Local Area Connection Status**.

3. Choose **Internet Protocol Version 4 (TCP/IPv4)** and click **Properties**.

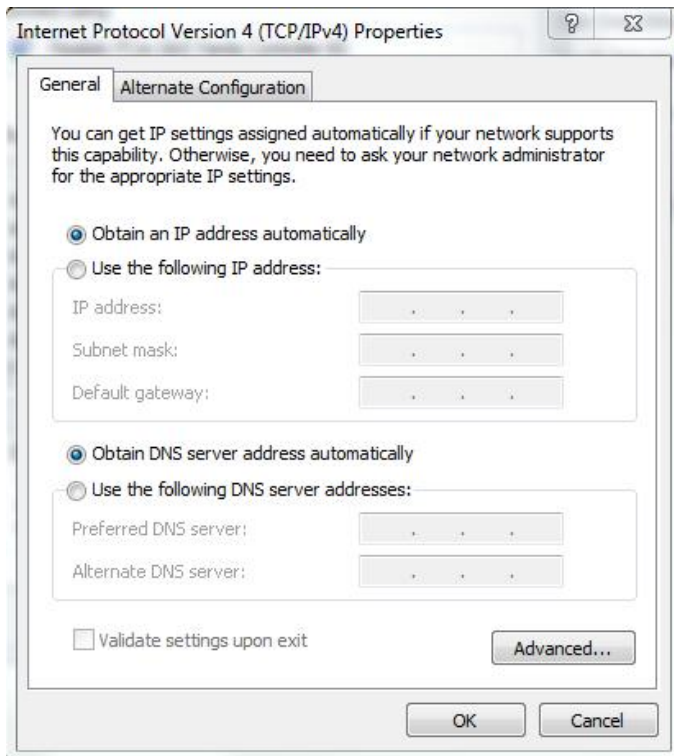

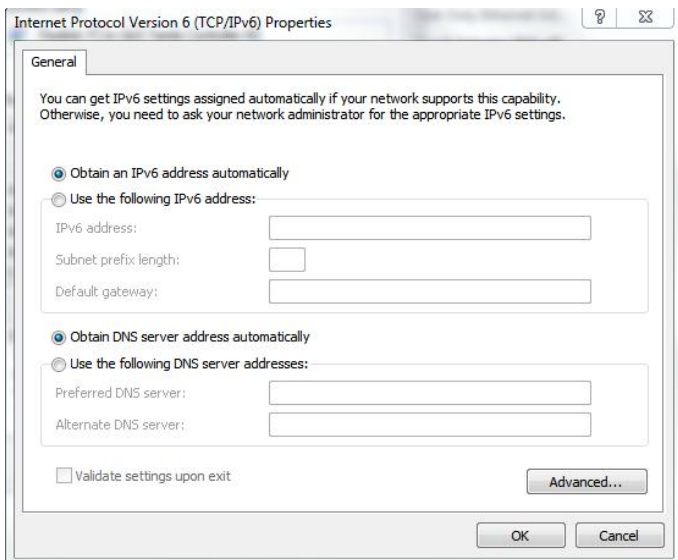

Select **Internet protocol version 6 (TCP/IPv6)**, and click **Properties**.

4. Two ways for configuring the IP address of PC

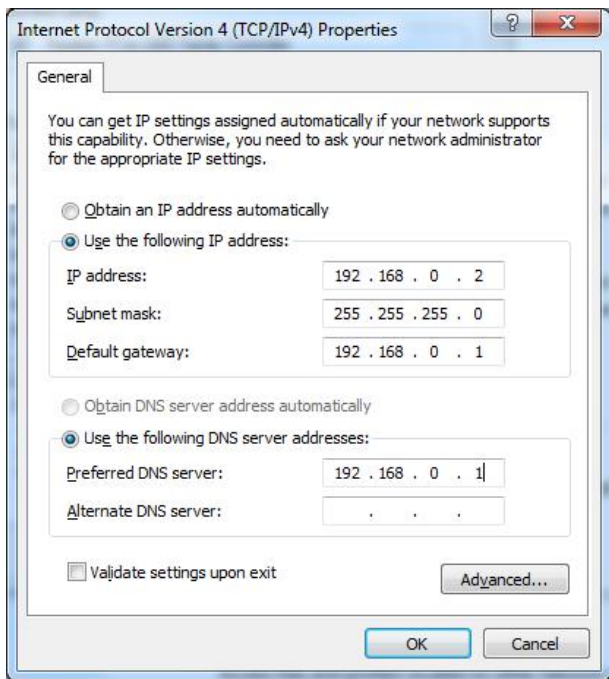

Obtain an IP address automatically:

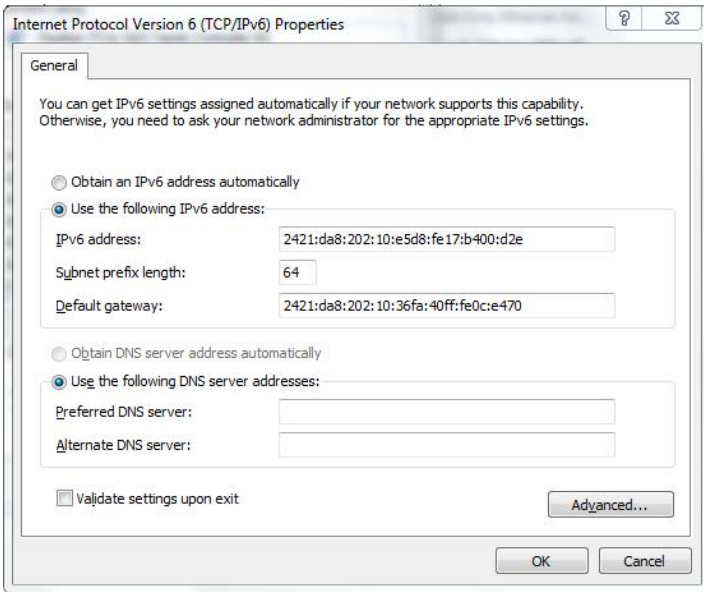

Use the following IP address:

(Configured a static IP address manually within the same subnet of the router)

5. Click **OK** to finish the configuration.

3.2 Factory Default Settings

Before configuring your router, you need to know the following default settings.

Item	Description
Username	admin
Password	admin

3.3 Log in the Router

To log in to the management page and view the configuration status of your router, please follow the steps below.

1. On your PC, open a web browser such as Internet Explorer, Google and Firebox, etc.
2. From your web browser, type the IP address of the router into the address bar and press enter. The default IP address of the router is <https://192.168.0.1/>, though the actual address may vary.

3. In the login page, enter the username and password, choose language and then click **LOGIN**. The default username and password are "admin".

Note: If enter the wrong username or password over six times, the login web will be locked for 5 minutes.

3.4 Control Panel

After logging in, the home page of the R3000 Router’s web interface is displayed, for example.

System Information

Device Model	R3000-4L
System Uptime	0 days, 00:24:35
System Time	Thu Nov 28 10:24:21 2019
RAM Usage	79M Free/128M Total
Firmware Version	3.3.0_20191124 (Rev 2935)
Hardware Version	1.2
Kernel Version	4.1.0
Serial Number	01870719090011

Internet Status

Uptime	0 days, 00:13:17
Active IPv4 Link	WWAN1
IPv4 Address	10.244.109.195/255.255.255.248
IPv4 Gateway	10.244.109.193

Copyright © 2019 Robustel Technologies. All rights reserved.

From the home page, users can perform operations such as saving configuration, restarting the router, and logging

out.

Using the original password to log in the router, the page will pop up the following tab

Click  to close the popup. It is strongly recommended for security purposes that you change the default username and/or password. To change your username and/or password, see **3.35 System > User Management**.

Control Panel		
Item	Description	Button
Save & Apply	Click to save the current configuration into router's flash and apply the modification on every configuration page, to make the modification taking effect.	
Reboot	Click to reboot the router. If the Reboot button is yellow, it means that some completed configurations will take effect only after reboot.	
Logout	Click to log the current user out safely. After logging out, it will switch to login page. Shut down web page directly without logout, the next one can login web on this browser without a password before timeout.	
Submit	Click to save the modification on current configuration page.	
Cancel	Click to cancel the modification on current configuration page.	

Note: The steps of how to modify configuration are as bellow:

1. Modify in one page;
2. Click  under this page;
3. Modify in another page;
4. Click  under this page;
5. Complete all modification;
6. Click .

3.5 Status

This page allows you to view the System Information, Internet Status and LAN Status of your Router.

MAC Address	Show the MAC address of the router.

3.6 Interface > Link Manager

This section allows you to setup the link connection.

General Settings @ Link Manager		
Item	Description	Default
Primary Link	Select from “WWAN1”, “WWAN2”, “WAN” or “WLAN”. <ul style="list-style-type: none"> • WWAN1: Select to make SIM1 as the primary wireless link • WWAN2: Select to make SIM2 as the primary wireless link • WAN: Select to make WAN Ethernet port as the primary wired link Note: WAN link is available only if enable eth0 as WAN port in Interface > Ethernet > Ports > Port Settings. • WLAN: Select to make WLAN as the primary wireless link Note: WLAN link is available only if enable WiFi as Client mode, please refer to 3.10 Interface > WiFi. 	WWAN1
Backup Link	Select from “None”, “WWAN1”, “WWAN2”, “WAN” or “WLAN”. <ul style="list-style-type: none"> • None: Do not select any backup link • WWAN1: Select to make SIM1 as backup wireless link • WWAN2: Select to make SIM2 as backup wireless link • WAN: Select to make WAN Ethernet port as the backup wired link Note: WAN link is available only if enable eth0 as WAN interface in Interface > Ethernet > Ports > Port Settings. • WLAN: Select to make WLAN as the backup wireless link Note: WLAN link is available only if enable WiFi as Client mode, please refer to 3.10 Interface > WiFi. 	WWAN2
Backup Mode	Select from “Cold Backup”, “Warm Backup” or “Load Balancing”. <ul style="list-style-type: none"> • Cold Backup: The inactive link is offline on standby • Warm Backup: The inactive link is online on standby Note: Warm backup mode is not available for dual SIM backup. • Load Balancing: Use two links simultaneously 	Cold Backup
Revert Interval	Specify the number of minutes that elapses before the primary link is checked if a backup link is being used in cold backup mode. 0 means disable checking. Note: Revert interval is available only under the cold backup mode.	0
Emergency Reboot	Click the toggle button to enable/disable this option. Enable to reboot the whole system if no links available.	OFF

Note: Click for help.

Link Settings allows you to configure the parameters of link connection, including WWAN1/WWAN2, WAN and WLAN. It is recommended to enable Ping detection to keep the router always online. The Ping detection increases the reliability and also costs the data traffic.

^ Link Settings

WLAN

Router will obtain IP automatically from the WLAN AP if choosing “DHCP” as the connection type. The specific parameter configuration of SSID is shown as below.

The screenshot shows the 'Link Manager' configuration interface. Under 'General Settings', the 'Index' is 4, 'Type' is WLAN, 'Description' is empty, and 'IPv6 Enable' is OFF. The 'IPv4 Connection Type' is set to DHCP, highlighted with a red box. Under 'WLAN Settings', the 'SSID' is 'router', 'Connect to Hidden SSID' is OFF, and 'Password' is empty.

The window is displayed as below when choosing “Static” as the IPv4 connection type.

The screenshot shows the 'Link Manager' configuration interface. Under 'General Settings', the 'Index' is 4, 'Type' is WLAN, 'Description' is empty, and 'IPv6 Enable' is OFF. The 'IPv4 Connection Type' is set to Static, highlighted with a red box. Under 'WLAN Settings', the 'Static Address Settings' section is expanded, showing fields for 'IP Address', 'Gateway', 'Primary DNS', and 'Secondary DNS', all of which are empty.

R3000 Router does not support the PPPoE WLAN Connection Type.

The screenshot shows the 'IPv6 LAN Settings' configuration interface. The 'Connection Type' is set to Static, 'IPv6 Prefix' is empty, and 'IPv6 NAT Enable' is OFF.

Click the **Clear** button to clear SIM1 or SIM2 monthly data traffic usage statistics. Data statistics will be displayed only if enable the Data Allowance function in **Interface > Link Manager > Link Settings > WWAN Settings > Data Allowance**.

3.7 Interface > LAN

This section allows you to set the related parameters for LAN port. There are two LAN ports on R3000 Router, including ETH0 and ETH1. The ETH0 and ETH1 can freely choose from lan0 and lan1, but at least one LAN port must be assigned as lan0. The default settings of ETH0 and ETH1 are lan0 and their default IP are 192.168.0.1/255.255.255.0.

LAN

By default, there is a LAN port (lan0) in the list. To begin adding a new LAN port (lan1), please configure ETH0 or ETH1 as lan1 first in **Ethernet > Ports > Port Settings**. Otherwise, the operation will be prompted as “List is full”.

Index	Interface	IPv4 Address	Netmask	VLAN ID
1	lan0	192.168.0.1	255.255.255.0	0

Note: Lan0 cannot be deleted.

You may click **+** to add a new LAN port, or click **X** to delete the current LAN port. Now, click **✎** to edit the configuration of the LAN port.

3.8 Interface > Ethernet

This section allows you to set the related parameters for Ethernet. There are two Ethernet ports on R3000 Router, including ETH0 and ETH1. The ETH0 on the router can be configured as either a WAN or a LAN port, while ETH1 can only be configured as a LAN port. By default, ETH0 and ETH1 are lan0, and their IP are 192.168.0.1/255.255.255.0. Since lan0 must be assigned to one port and WAN port must be assigned to the ETH0, there are four configurations. You can choose the appropriate configuration to fit your current needs. The specific port configurations are shown below.

Ports	Status	
^ Port Settings ?

This section allows you to view the status of AP.

Note: The WiFi function is turned off by default on the router. If you need to use it, please turn on WiFi according to the following steps and configure the router as a WiFi client.

WiFi Client

Configure Router as WiFi client

Click **Interface > WiFi > WiFi**, select "Client" as the mode and click "Submit > Save & Apply".

And then a "WLAN" column will appear under the Interface list.

Click **Interface > Link Manager > Link Settings**, and click the edit button of WLAN, then configure the related

parameters of WLAN.

The screenshot shows the 'WLAN Settings' configuration page. It features a dark blue header with an upward-pointing arrow and the text 'WLAN Settings'. Below the header, there are three configuration items: 'SSID' with a text input field containing 'router'; 'Connect to Hidden SSID' with a toggle switch currently set to 'OFF'; and 'Password' with an empty text input field.

Click **Interface > WLAN** to configure the parameters of WiFi Client after setting the mode as Client. Please remember to click **Save & Apply > Reboot** after finish the configuration, so that the configuration can be took effect.

3.14 Network > Route

This section allows you to set the static route. Static route is a form of routing that occurs when a router uses a manually-configured routing entry, rather than information from a dynamic routing traffic. Route Information Protocol (RIP) is widely used in small network with stable use rate. Open Shortest Path First (OSPF) is made router within a single autonomous system and used in large network.

Static Route

3.16 Network > IP Passthrough

Click **Network > IP Passthrough > IP Passthrough** to enable or disable the IP Pass-through option.

If router enables the IP Pass-through, the terminal device (such as PC) will enable the DHCP Client mode and connect to LAN port of the router; and after the router dial up successfully, the PC will automatically obtain the IP address and DNS server address which assigned by ISP.

3.17 VPN > IPsec

IPsec (Internet Protocol Security) is a protocol built on the Internet protocol layer that enables two hosts to communicate in a secure manner. IPsec is the direction of secure networking. It provides active protection from end-to-end security to prevent attacks from private networks and the Internet.

Click **Virtual Private Network> IPsec> General** to set IPsec parameters.

General

General Settings @ General		
Item	Description	Default
Survival time	Set the survival time in seconds. The router sends keep-alive packets to a NAT (Network Address Translation) server at regular intervals to prevent the records on the NAT table from disappearing.	20
Optimize DH index size	Click the toggle button to enable / disable this option. When enabled, when using dhgroup17 or dhgroup18, it helps to shorten the time to generate dh keys.	OFF
Debug Enable	Click the toggle button to enable/disable this option. Enable for IPsec VPN information output to the debug port.	OFF

Tunnel

Negotiation Mode	Select from “Main” and “Aggressive” for the IKE negotiation mode in phase 1. If the IP address of one end of an IPsec tunnel is obtained dynamically, the IKE negotiation mode must be aggressive. In this case, SAs can be established as long as the username and password are correct.	Main
Authentication Algorithm	Select from “MD5”, “SHA1”, “SHA2 256” or “SHA2 512” to be used in IKE negotiation.	SHA1
Encryption Algorithm	Select from “3DES”, “AES128”, “AES192” and “AES256” to be used in IKE negotiation.	3DES

IKE Settings		
Item	Description	Default
	<ul style="list-style-type: none"> 3DES: Use 168-bit 3DES encryption algorithm in CBC mode AES128: Use 128-bit AES encryption algorithm in CBC mode AES256: Use 256-bit AES encryption algorithm in CBC mode 	
IKE DH Group	Select DH packets for IKE (Network Key Exchange) negotiation. Select from "DHgroup1", "DHgroup2", "DHgroup5", "DHgroup14", "DHgroup15", "DHgroup16", "DHgroup17" or "DHgroup18" to be used in key negotiation phase 1.	DHgroup2
Authentication Type	Select from "PSK", "CA", "PKCS#12", "xAuth PSK" and "xAuth CA" to be used in IKE negotiation. <ul style="list-style-type: none"> PSK: Pre-shared Key CA: Certification Authority xAuth: Extended Authentication to AAA server 	PSK
PSK Secret	Enter the pre-shared key.	Null
Local ID Type	Select from "Default", "FQDN" and "User FQDN" for IKE negotiation. <ul style="list-style-type: none"> Default: Uses an IP address as the ID in IKE negotiation FQDN: Uses an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security gateway, e.g., test.robustel.com. User FQDN: Uses a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with a sign "@" for the local security gateway, e.g., test@robustel.com. 	Default
Remote ID Type	Select from "Default", "FQDN" and "User FQDN" for IKE negotiation. <ul style="list-style-type: none"> Default: Uses an IP address as the ID in IKE negotiation FQDN: Uses an FQDN type as the ID in IKE negotiation. If this option is selected, type a name without any at sign (@) for the local security gateway, e.g., test.robustel.com. User FQDN: Uses a user FQDN type as the ID in IKE negotiation. If this option is selected, type a name string with a sign "@" for the local security gateway, e.g., test@robustel.com. 	Default
Private Key Password	Enter the private key under the "CA" and "xAuth CA" authentication types.	Null
Username	Enter the username used for the "xAuth PSK" and "xAuth CA" authentication types.	Null
Password	Enter the password used for the "xAuth PSK" and "xAuth CA" authentication types.	Null
IKE Lifetime	Set the lifetime in IKE negotiation. Before an SA expires, IKE negotiates a new SA. As soon as the new SA is set up, it takes effect immediately and the old one will be cleared automatically when it expires.	86400

If click **VPN > IPsec > Tunnel > General Settings**, and choose **ESP** as protocol. The specific parameter configuration is shown as below.

^ SA Settings

Encrypt Algorithm	3DES	v
Authentication Algorithm	MD5	v

SA Settings		
Item	Description	Default
Encrypt Algorithm	Select from "3DES", "AES128" or "AES256" when you select "ESP" in "Protocol". Higher security means more complex implementation and lower speed. DES is enough to meet general requirements. Use 3DES when high confidentiality and security are required.	3DES
Authentication Algorithm	Select from "MD5", "SHA1", "SHA2 256" or "SHA2 512" to be used in SA negotiation.	MD5
PFS Group	Select from "PFS (N/A)", "DHgroup1", "DHgroup2", "DHgroup5", "DHgroup14", "DHgroup15", "DHgroup16", "DHgroup17" or "DHgroup18" to be used in SA negotiation.	DHgroup2
SA Lifetime	Set the IPsec SA lifetime. When negotiating to set up IPsec SAs, IKE uses the smaller one between the lifetime set locally and the lifetime proposed by the peer.	28800
DPD Interval	Set the interval after which DPD is triggered if no IPsec protected packets is	60

SA Settings		
Item	Description	Default
	received from the peer. DPD is a Dead peer detection. DPD irregularly detects dead IKE peers. When the local end sends an IPsec packet, DPD checks the time the last IPsec packet was received from the peer. If the time exceeds the DPD interval, it sends a DPD hello to the peer. If the local end receives no DPD acknowledgment within the DPD packet retransmission interval, it retransmits the DPD hello. If the local end still receives no DPD acknowledgment after having made the maximum number of retransmission attempts, it considers the peer already dead, and clears the IKE SA and the IPsec SAs based on the IKE SA.	
DPD Failures	Set the timeout of DPD (Dead Peer Detection) packets.	180
Advanced Settings		
Enable Compression	Click the toggle button to enable/disable this option. Enable to compress the inner headers of IP packets.	OFF
Enable Forced Encapsulation	Click the toggle button to enable / disable this option. After it is enabled, even if no NAT condition is detected, the UDP encapsulation of esp packets is forced. This may help overcome restrictive firewalls.	OFF
Expert Options	Add more PPP configuration options here, format: config-desc;config-desc, e.g. protostack=netkey;plutodebug=none	Null

3.18 VPN > OpenVPN

This section allows you to set the OpenVPN and the related parameters. OpenVPN is an open-source software application that implements virtual private network (VPN) techniques for creating secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. Router supports point-to-point and point-to-points connections.

3.20 Services > Syslog

This section allows you to set the syslog parameters. The system log of the router can be saved in the local, also supports to be sent to remote log server and specified application debugging. By default, the “Log to Remote” option is disabled.

The window is displayed as below when enabling the “Log to Remote” option.

Syslog Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the Syslog settings option.	OFF
Syslog Level	Select from “Debug”, “Info”, “Notice”, “Warning” or “Error”, which from low to high. The lower level will output more syslog in detail.	Debug
Save Position	Select the save position from “RAM”, “NVM” or “Console”. Choose “RAM”, the data will be cleared after reboot. Note: It's not recommended that saving syslog to NVM (Non-Volatile Memory) for a long time.	RAM
Log to Remote	Click the toggle button to enable/disable this option. Enable to allow router sending syslog to the remote syslog server. You need to enter the IP and Port of the syslog server.	OFF
Add Identifier	Click the toggle button to enable/disable this option. When enabled, you can add serial number to syslog message which used for loading Syslog to RobustLink.	OFF
Remote IP Address	Enter the IP address of syslog server when enabling the “Log to Remote” option.	Null
Remote Port	Enter the port of syslog server when enabling the “Log to Remote” option.	514

3.22 Services > NTP

This section allows you to set the related NTP (Network Time Protocol) parameters, including Time zone, NTP Client and NTP Server.

NTP

Status

^ Timezone Settings

Time Zone v

Expert Setting ?

^ NTP Client Settings

Enable ON OFF

Primary NTP Server

Secondary NTP Server

NTP Update Interval ?

^ NTP Server Settings

Enable ON OFF

NTP		
Item	Description	Default
Timezone Settings		
Time Zone	Click the drop down list to select the time zone you are in.	UTC +08:00
Expert Setting	Specify the time zone with Daylight Saving Time in TZ environment variable format. The Time Zone option will be ignored in this case.	Null
NTP Client Settings		
Enable	Click the toggle button to enable/disable this option. Enable to synchronize time with the NTP server.	ON
Primary NTP Server	Enter primary NTP Server's IP address or domain name.	pool.ntp.org
Secondary NTP Server	Enter secondary NTP Server's IP address or domain name.	Null
NTP Update interval	Enter the interval (minutes) which NTP client synchronize the time from NTP server. Minutes wait for next update, and 0 means update only once.	0

NTP Server Settings		
Enable	Click the toggle button to enable the NTP server option.	OFF

This window allows you to view the current time of router and also synchronize the router time. Click **Sync** button to synchronize the router time with PC's.

The screenshot shows a window titled 'NTP' with a 'Status' tab. Under the 'Time' section, it displays:

- System Time: 2019-12-31 10:48:42
- PC Time: 2019-12-31 10:48:44 (with a 'Sync' button next to it)
- Last Update Time: 2019-12-31 09:52:08

3.23 Services > SMS

This section allows you to set SMS parameters. Router supports SMS management, and user can control and configure their routers by sending SMS. For more details about SMS control, refer to **4.2.2 SMS Remote Control**.

The screenshot shows the 'SMS Management Settings' window. It includes:

- An 'Enable' toggle switch currently set to 'ON'.
- An 'Authentication Type' dropdown menu set to 'Password'.
- A 'Phone Number' input field.

SMS Management Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the SMS Management option. Note: If this option is disabled, the SMS configuration is invalid.	ON
Authentication Type	Select Authentication Type from “Password”, “Phonenum” or “Both”. <ul style="list-style-type: none"> • Password: Use the same username and password as WEB manager for authentication. For example, the format of the SMS should be “username: password; cmd1; cmd2; ...” • Phonenum: Use the Phone number for authenticating, and user should set the Phone Number that is allowed for SMS management. The format of the SMS should be “cmd1; cmd2; ...” • Both: Use both the “Password” and “Phonenum” for authentication. User should set the Phone Number that is allowed for SMS management. The format of the SMS should be “username: password; cmd1; cmd2; ...” 	Password
Phone Number	Set the phone number used for SMS management, and use ‘;’ to separate each number. Note: It can be null when choose “Password” as the authentication type.	Null

User can test the current SMS service whether it is available in this section.

Enable STARTTLS	Click the toggle button to enable / disable STARTTLS encryption.	OFF
Outgoing server	Enter the SMTP server IP Address or domain name.	Null
Server port	Enter the SMTP server port.	25
Timeout	Set the max time for sending email to SMTP server. When the server doesn't receive the email over this time, it will try to resend.	10
Auth Login	If the mail server supports AUTH login, you must enable this button and set a username and password.	OFF
Username	Enter the username which has been registered from SMTP server.	Null
Password	Enter the password of the username above.	Null
From	Enter the source address of the email.	Null
Subject	Enter the subject of this email.	Null

3.25 Services > DDNS

This section allows you to set the DDNS parameters. The Dynamic DNS function allows you to alias a dynamic IP address to a static domain name, allows you whose ISP does not assign them a static IP address to use a domain name. This is especially useful for hosting servers via your connection, so that anyone wishing to connect to you may use your domain name, rather than having to use your dynamic IP address, which changes from time to time. This dynamic IP address is the WAN IP address of the router, which is assigned to you by your ISP. The service provider defaults to "DynDNS", as shown below.

The screenshot shows the 'DDNS Settings' window. At the top, there are tabs for 'DDNS' and 'Status'. Below the tabs, there is a section titled '^ DDNS Settings'. It contains an 'Enable' toggle switch currently set to 'OFF'. Below the toggle is a 'Service Provider' dropdown menu with 'DynDNS' selected. Underneath are four input fields: 'Hostname', 'Username', and 'Password', all of which are currently empty.

When "Custom" service provider chosen, the window is displayed as below.

The screenshot shows the 'DDNS Settings' window with 'Custom' selected in the 'Service Provider' dropdown menu. The 'Enable' toggle is still 'OFF'. Below the dropdown is a 'URL' input field, which is currently empty.

DDNS Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable the DDNS option.	OFF

Service Provider	Select the DDNS service from “DynDNS”, “NO-IP” or “3322”. Note: the DDNS service only can be used after registered by Corresponding service provider.	DynDNS
Hostname	Enter the hostname provided by the DDNS server.	Null
Username	Enter the username provided by the DDNS server.	Null
Password	Enter the password provided by the DDNS server.	Null
URL	Enter the URL customized by user.	Null

Click “Status” bar to view the status of the DDNS.

The screenshot shows a navigation bar with 'DDNS' and 'Status' tabs. Below it is a section titled '^ DDNS Status' containing the text 'Status Disabled' and 'Last Update Time'.

DDNS Status	
Item	Description
Status	Display the current status of the DDNS.
Last Update Time	Display the date and time for the DDNS was last updated successfully.

3.26 Services > SSH

Router supports SSH password access and secret-key access.

The screenshot shows a navigation bar with 'SSH' and 'Keys Management' tabs. Below it is a section titled '^ SSH Settings' containing three controls: 'Enable' with a toggle set to 'ON', 'Port' with a text input field containing '22', and 'Disable Password Logins' with a toggle set to 'OFF'.

SSH Settings		
Item	Description	Default
Enable	Click the toggle button to enable/disable this option. When enabled, you can access the router via SSH.	OFF
Port	Set the port of the SSH access.	22
Disable Password Logins	Click the toggle button to enable/disable this option. When enabled, you cannot use username and password to access the router via SSH. In this case, only the key can be used for login.	OFF

SSH | **Keys Management**

^ Import Authorized Keys

Authorized Keys **Import**

Keys Management	
Item	Description
Authorized Keys	Click on "Choose File" to locate an authorized key from your computer, and then click "Import" to import this key into your router. Note: This option is valid when enabling the password logins option.

3.27 Services > GPS

This section allows you to set the GPS setting parameters.

3.33 System > Tools

This section provides users three tools: Ping, Traceroute and Sniffer.

Ping		
Item	Description	Default
IP address	Enter the ping's destination IP address or destination domain.	Null
Number of Requests	Specify the number of ping requests.	5
Timeout	Specify the timeout of ping request.	1
Local IP	Specify the local IP from cellular WAN, Ethernet WAN or Ethernet LAN. Null stands for selecting local IP address from these three automatically.	Null
	Click this button to start ping request, and the log will be displayed in the follow box.	Null
	Click this button to stop ping request.	--

Ping
Traceroute
Sniffer

^ Traceroute

Trace Address

Trace Hops

Trace Timeout

Traceroute		
Item	Description	Default
Trace Address	Enter the trace's destination IP address or destination domain.	Null
Trace Hops	Specify the max trace hops. Router will stop tracing if the trace hops has met max value no matter the destination has been reached or not.	30
Trace Timeout	Specify the timeout of Traceroute request.	1
<input type="button" value="Start"/>	Click this button to start Traceroute request, and the log will be displayed in the follow box.	--
<input type="button" value="Stop"/>	Click this button to stop Traceroute request.	--

Ping
Traceroute
Sniffer

^ Sniffer

Interface

Host

Packets Request

Protocol

Status

^ Capture Files

Index	File Name	File Size	Modification Time	
1	19-09-11_21-18-43.cap	52420	Wed Sep 11 21:18:54 2019	

Sniffer		
Item	Description	Default
Interface	Choose the interface according to your Ethernet configuration.	All
Host	Filter the packet that contain the specify IP address.	Null
Packets Request	Set the packet number that the router can sniffer at a time.	1000
Protocol	Select from "All", "IP", "TCP", "UDP" and "ARP".	All
Port	Set the port number for TCP or UDP that is used in sniffer.	Null
Status	Show the current status of sniffer.	Null
	Click this button to start the sniffer.	--
	Click this button to stop the sniffer. Once you click this button, a new log file will be displayed in the following List.	--
Capture Files	Every times of sniffer log will be saved automatically as a new file. You can find the file from this Sniffer Traffic Data List and click to download the log, click to delete the log file. It can cache a maximum of 5 files.	Null

3.34 System > Profile

This section allows you to import or export the configuration file, and restore the router to factory default setting.

Profile

Rollback

Import Configuration File

Reset Other Settings to Default: OFF

Ignore Invalid Settings: OFF

Rollback

^ Configuration Rollback

Save as a Rollbackable Archive **Save** ?

^ Configuration Archive Files

Index	File Name	File Size	Modification Time

Rollback		
Item	Description	Default
Configuration Rollback		
Save as a Rollbackable Archive	Create a save point manually. Additionally, the system will create a save point every day automatically if configuration changes.	--
Configuration Archive Files		
Configuration Archive Files	View the related information about configuration archive files, including name, size and modification time.	--

3.35 System > User Management

One router has only one super user who has the highest authority to modify, add and manage other common users.

Super User Settings		
Item	Description	Default
New Username	Enter a new username you want to create; valid characters are a-z, A-Z, 0-9, @, ., -, #, \$, and *.	Null
Old Password	Enter the old password of your router. The default is "admin".	Null
New Password	Enter a new password you want to create; valid characters are a-z, A-Z, 0-9, @, ., -, #, \$, and *.	Null
Confirm Password	Enter the new password again to confirm.	Null

Click **+** button to add a new common user. The maximum rule count is 5.

Common User Settings		
Item	Description	Default
Index	Indicate the ordinal of the list.	--
Role	Select from "Visitor" and "Editor". <ul style="list-style-type: none"> Visitor: Users only can view the configuration of router under this level Editor: Users can view and set the configuration of router under this level 	Visitor
Username	Set the Username; valid characters are a-z, A-Z, 0-9, @, ., -, #, \$, and *.	Null
Password	Set the password which at least contains 5 characters; valid characters are a-z, A-Z,	Null

	0-9, @, ., -, #, \$, and *.	
--	-----------------------------	--

Chapter 4 Configuration Examples

4.1 Interface

4.1.1 Console Port

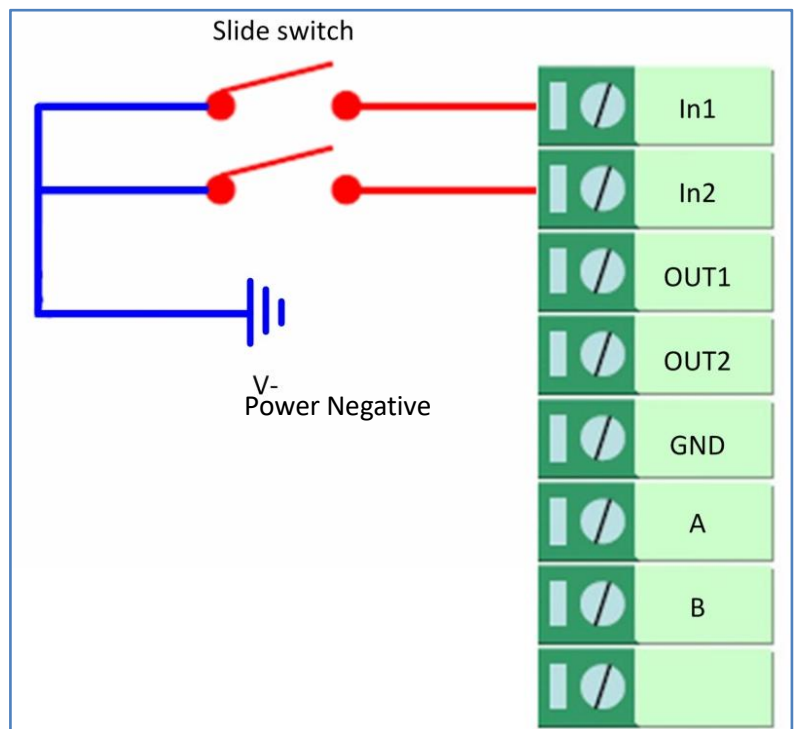

You can use the console port to manage the router via CLI commands, please refer to **Chapter 5 Introductions for CLI**.

4.1.2 Digital Input

R3000 supports digital input with dry contact. Please check the connector interface of the router, you can easily find a mark "V-" at one pin of the power connector.

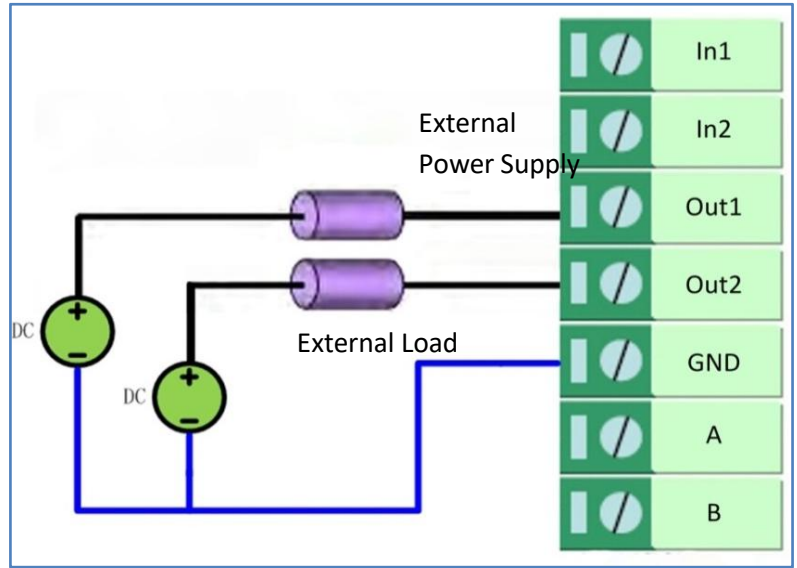

Note: Do not connect In1/In2 directly and do not slide the switch to the port marked "GND" on the terminal block. Otherwise, the DI cannot work properly.

4.1.3 Digital Output

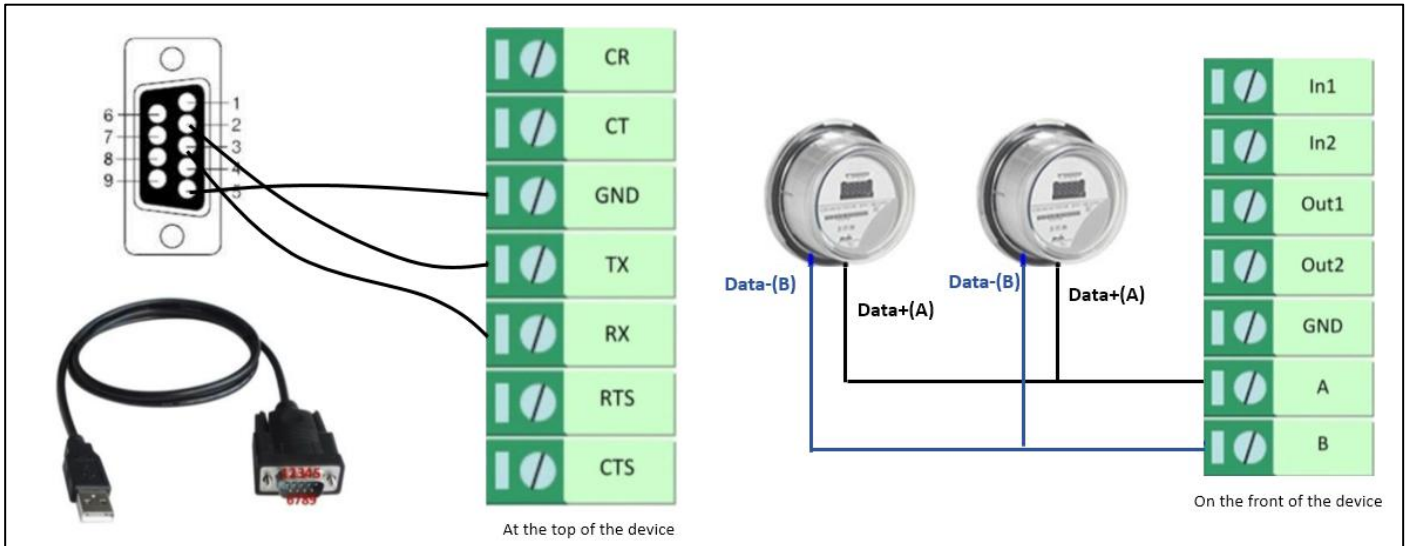

R3000 supports digital output with wet contact. Please refer to the right side figure to connect the negative pole of the power to the port marked “GND”.

The maximum output voltage, output current and output power of DO is 30V DC, 0.3 A and 0.3 W respectively. It means that the voltage difference between Out1, Out2 and GND cannot exceed to 30V DC; and the current value through Out1 and Out2 cannot exceed to 300 mA; while the output power dissipated by Out1 and Out2 cannot exceed to 0.3W. Otherwise, the DO will be damaged.

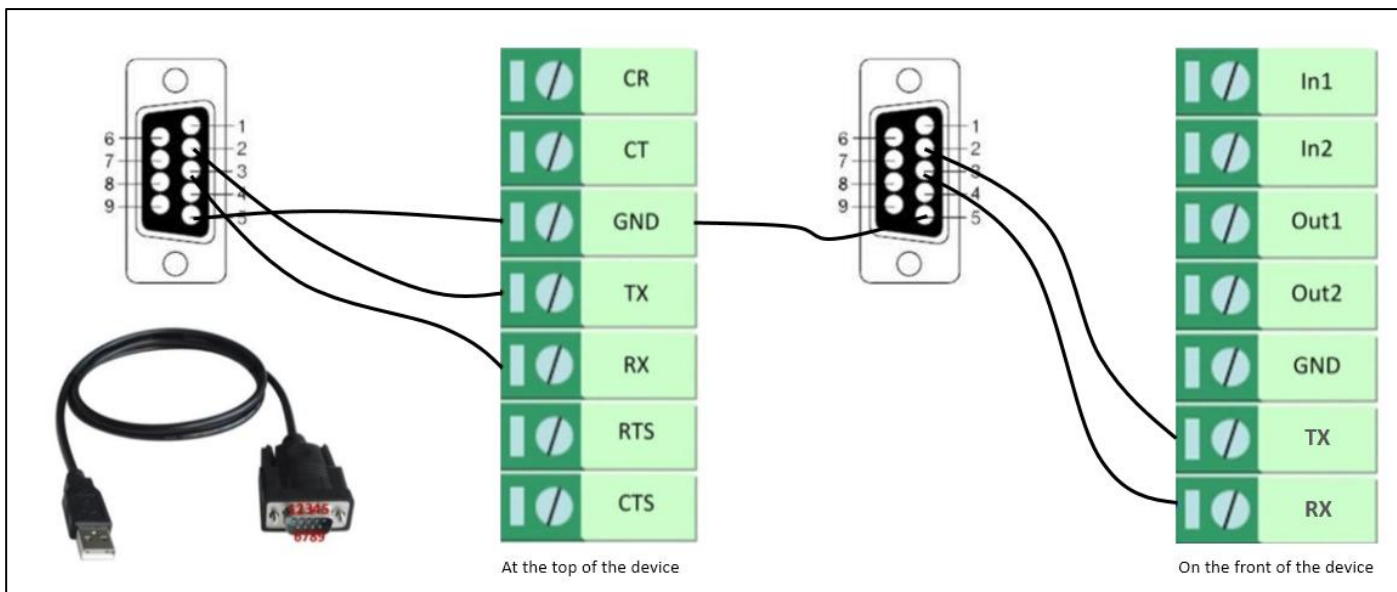

4.1.4 1*RS-232+1*RS-485

R3000 supports 1*RS-232+1*RS-485 for serial port data communication. Please refer to the connection diagram shown below.

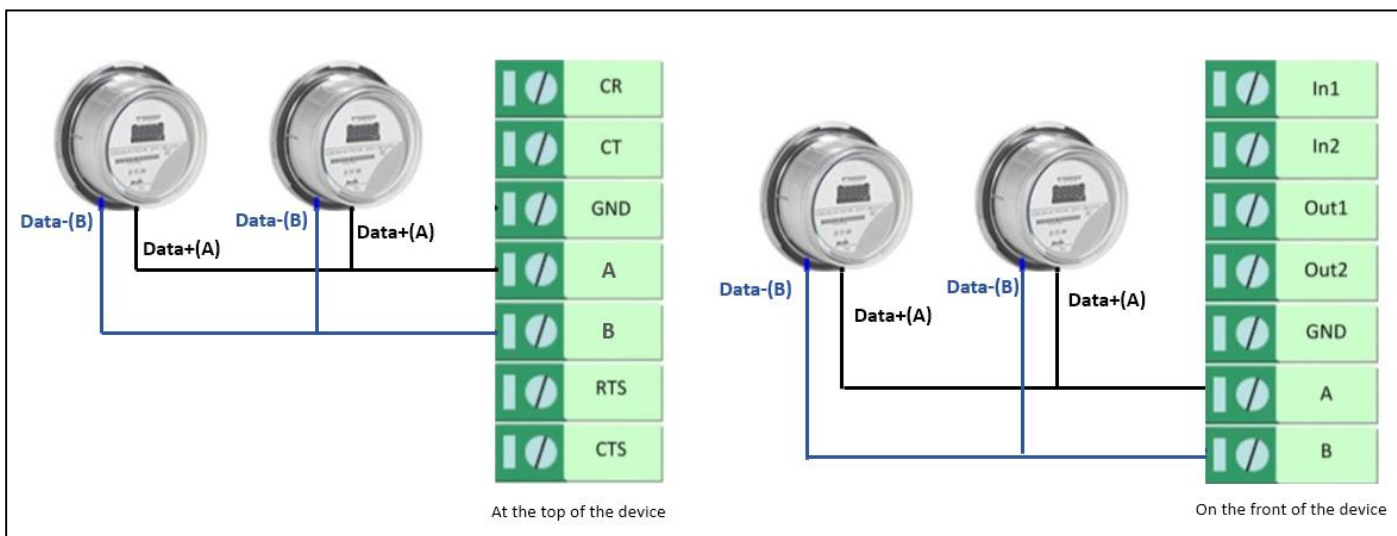

4.1.5 2*RS-232

R3000 supports 2*RS-232 for serial port data communication. Please refer to the connection diagram shown below.

4.1.6 2*RS-485

R3000 supports 2*RS-485 for serial port data communication. Please refer to the connection diagram shown below.

4.2 Cellular

4.2.1 Cellular Dial-Up

This section shows you how to configure the primary and backup SIM card for Cellular Dial-up. Connect the router correctly and insert two SIM, then open the configuration page. Under the homepage menu, click **Interface > Link Manager > Link Manager > General Settings**, choose “WWAN1” as the primary link and “WWAN2” as the backup link, and set “Cold Backup” as the backup mode, then click “Submit”.

Note: All data will be transferred via WWAN1 when choose WWAN1 as the primary link and set backup mode as cold backup. At the same time, WWAN2 is always offline as a backup link. All data transmission will be switched to WWAN2 when the WWAN1 is disconnected.

Index	Type	Description	IPv4 Connection Type	IPv6 Connection Type	
1	WWAN1	admin	DHCP	SLAAC	
2	WWAN2		DHCP	SLAAC	
3	WAN		DHCP	SLAAC	
4	WLAN		DHCP	SLAAC	

Click the of righttest of WWAN1 to set its parameters according to the current ISP.

4.2.2 SMS Remote Control

The router supports remote control via SMS. You can use following commands to get the status of the router, and set all the parameters. There are three authentication types for SMS control. You can select from “Password”, “Phonenum” or “Both”.

An SMS command has the following structure:

1. Password mode—**Username: Password;cmd1;cmd2;cmd3; ...cmdn** (available for every phone number).
2. Phonenum mode—**Password;cmd1; cmd2; cmd3; ... cmdn** (available when the SMS was sent from the phone number which had been added in R3000’s phone group).
3. Both mode-- **Username: Password;cmd1;cmd2;cmd3; ...cmdn** (available when the SMS was sent from the phone number which had been added in R3000’s phone group).

SMS command Explanation:

1. User name and Password: use the same username and password as WEB manager for authentication.
2. cmd1, cmd2, cmd3 to Cmdn, the command format is the same as the CLI command, more details about CLI cmd please refer to **Chapter 5 Introductions for CLI**.

Note: Download the configure XML file from the configured web browser. The format of SMS control command can refer to the data of the XML file.

Go to **System > Profile > Export Configuration File**, click **Generate** to generate the XML file and click **Export** to export the XML file.

XML command:

```
<lan>
<network max_entry_num="2">
<id>1</id>
<interface>lan0</interface>
<ip>172.16.24.24</ip>
<netmask>255.255.0.0</netmask>
<mtu>1500</mtu>
```

SMS cmd:

```
set lan network 1 interface lan0
set lan network 1 ip 172.16.24.24
set lan network 1 netmask 255.255.0.0
set lan network 1 mtu 1500
```

3. The semicolon character (“;”) is used to separate more than one command packed in a single SMS.
4. E.g.

admin:admin;status system

In this command, username is “admin”, password is “admin”, and the function of the command is to get the system status.

SMS received:

```
hardware_version = 1.2
```

```

firmware_version = "3.0.0"
kernel_version = 4.1.0
device_model = R3000
serial_number = 201612221052
uptime = "0 days, 00:40:21"
system_time = "Mon Feb 27 09:52:52 2017"

```

admin:admin;reboot

In this command, username is "admin", password is "admin", and the command is to reboot the Router.

SMS received:

OK

admin:admin;set firewall remote_ssh_access false;set firewall remote_telnet_access false

In this command, username is "admin", password is "admin", and the command is to disable the remote_ssh and remote_telnet access.

SMS received:

OK

OK

admin:admin; set lan network 1 interface lan0;set lan network 1 ip 172.16.24.24;set lan network 1 netmask 255.255.0.0;set lan network 1 mtu 1500

In this command, username is "admin", password is "admin", and the commands is to configure the LAN parameter.

SMS received:

OK

OK

OK

OK

4.3 Network

4.3.1 IPsec VPN

The configuration of server and client is as follows.

IPsec VPN_Server:

Cisco 2811:

```

4.3.2 OpenVPN

OpenVPN supports two modes, including Client and P2P. Here takes P2P as an example.

The configuration of two points is as follows.

OpenVPN_Server:

Generate relevant OpenVPN certificate on the server side firstly, and refer to the following commands to configuration the Server:

```
local 202.96.1.100
mode server
port 1194
proto udp
dev tun
tun-mtu 1500
fragment 1500
ca ca.crt
cert Server01.crt
key Server01.key
dh dh1024.pem
server 10.8.0.0 255.255.255.0
ifconfig-pool-persist ipp.txt
push "route 192.168.3.0 255.255.255.0"
client-config-dir ccd
route 192.168.1.0 255.255.255.0
keepalive 10 120
cipher BF-CBC
comp-lzo
max-clients 100
persist-key
persist-tun
status openvpn-status.log
verb 3
```

Note: For more configuration details, please contact your technical support engineer.

Chapter 5 Introductions for CLI

5.1 What Is CLI

The R3000 command-line interface (CLI) is a software interface providing another way to set the parameters of equipment from the [SSH](#) or through a [telnet](#) network connection.

```

New Session - Xshell 5 (Free for Home/School)
telnet://192.168.0.1:23

CLI commands:

? (**Note:** the '?' won't display on the page.)

!	Comments
add	Add a list entry of configuration
clear	Clear statistics
config	Configuration operation
debug	Output debug information to the console
del	Delete a list entry of configuration
exit	Exit from the CLI

help	Display an overview of the CLI syntax
ovpn_cert_get	Download OpenVPN certificate file via http or ftp
ping	Send messages to network hosts
reboot	Halt and perform a cold restart
route	Static route modify dynamically, this setting will not be saved
set	Set system configuration
show	Show system configuration
status	Show running system information
tftpupdate	Update firmware using tftp
traceroute	Print the route packets trace to network host
urlupdate	Update firmware using http or ftp
ver	Show version of firmware

5.2 How to Configure the CLI

Following is a table about the description of help and the error should be encountered in the configuring program.

Commands /tips	Description
?	<p>Typing a question mark “?” will show you the help information.</p> <p>eg.</p> <pre># config (Press ‘?’) config Configuration operation</pre> <p># config (Press spacebar +’?’)</p> <pre>commit Save the configuration changes and take effect changed configuration save_and_apply Save the configuration changes and take effect changed configuration loaddefault Restore Factory Configuration</pre>
Ctrl+c	Press these two keys at the same time, except its “copy” function but also can be used for “break” out of the setting program.
Syntax error: The command is not completed	Command is not completed.
Tick space key+ Tab key	<p>It can help you finish you command.</p> <p>Example:</p> <pre># config (tick Enter key) Syntax error: The command is not completed # config (tick space key+ Tab key) commit save_and_apply loaddefault</pre>
#config commit # config save_and_apply	<p>When your setting finished, you should enter those commands to make your setting take effect on the device.</p> <p>Note: Commit and save_and_apply plays the same role.</p>

5.3 Commands Reference

Commands	Syntax	Description
Debug	Debug <i>parameters</i>	Turn on or turn off debug function
Show	Show <i>parameters</i>	Show current configuration of each function , if we need to see all please using “show running ”
Set	Set <i>parameters</i>	All the function parameters are set by commands set and add, the difference is that set is for the single parameter and add is for the list parameter
Add	Add <i>parameters</i>	

Note: Download the config.XML file from the configured web browser. The command format can refer to the config.XML file format.

5.4 Quick Start with Configuration Examples

The best and quickest way to master CLI is firstly to view all features from the webpage and then read all CLI commands at a time, finally learn to configure it with some reference examples.

Example 1: Show current version

```
# status system
hardware_version = 1.2
firmware_version = "3.0.0"
kernel_version = 4.1.0
device_model = R3000
serial_number = 201612221052
uptime = "0 days, 00:40:21"
system_time = "Mon Feb 27 09:52:52 2017"
```

Example 2: Update firmware via tftp

```
# tftpupdate (space+?)
  firmware  New firmware
# tftpupdate firmware (space+?)
  String   Firmware name
# tftpupdate firmware filename R3000-firmware-sysupgrade-unknown.bin host 192.168.100.99 //enter a new
firmware name
Downloading
R3000-firmware-s 100% |*****| 5018k 0:00:00 ETA
Flashing
Checking 100%
Decrypting 100%
Flashing 100%
Verifying 100%
Verify Success
upgrade success //update success
# config save_and_apply
OK // save and apply current configuration, make you configuration effect
```

Example 3: Set link-manager

```
# set
# set
  at_over_telnet  AT Over Telnet
  cellular        Cellular
  ddns            Dynamic DNS
  ethernet        Ethernet
  event           Event Management
```

firewall	Firewall	
gre	GRE	
ipsec	IPsec	
lan	Local Area Network	
link_manager	Link Manager	
ntp	NTP	
openvpn	OpenVPN	
reboot	Automatic Reboot	
RobustLink	RobustLink	
route	Route	
sms	SMS	
snmp	SNMP agent	
ssh	SSH	
syslog	Syslog	
system	System	
user_management	User Management	
vrrp	VRRP	
web_server	Web Server	
# set link_manager		
primary_link	Primary Link	
backup_link	Backup Link	
backup_mode	Backup Mode	
emergency_reboot	Emergency Reboot	
link	Link Settings	
# set link_manager primary_link (space+?)		
Enum Primary Link (wwan1/wwan2/wan)		
# set link_manager primary_link wwan1		//select "wwan1" as primary_link
OK		//setting succeed
# set link_manager link 1		
type	Type	
desc	Description	
connection_type	Connection Type	
wwan	WWAN Settings	
static_addr	Static Address Settings	
pppoe	PPPoE Settings	
ping	Ping Settings	
mtu	MTU	
dns1_overridden	Overridden Primary DNS	
dns2_overridden	Overridden Secondary DNS	
# set link_manager link 1 type wwan1		
OK		
# set link_manager link 1 wwan		
auto_apn	Automatic APN Selection	
apn	APN	
username	Username	
password	Password	

```

dialup_number          Dialup Number
auth_type              Authentication Type
aggressive_reset       Aggressive Reset
switch_by_data_allowance  Switch SIM By Data Allowance
data_allowance         Data Allowance
billing_day            Billing Day
# set link_manager link 1 wwan switch_by_data_allowance true
OK
#
# set link_manager link 1 wwan data_allowance 100                //open cellular switch_by_data_traffic
OK                                                                //setting succeed
# set link_manager link 1 wwan billing_day 1                    //setting specifies the day of month for billing
OK                                                                //setting succeed
...
# config save_and_apply
OK                                                                // save and apply current configuration, make you configuration effect

```

Example 4: Set Ethernet

```

# set Ethernet port_setting 2 port_assignmEnt lan0              //Set Table 2 (eth1) to lan0
OK
# config save_and_apply                                        //setting succeed
OK

```

Example 5: Set LAN IP address

```

# show lan all
network {
    id = 1
    interface = lan0
    ip = 192.168.0.1
    netmask = 255.255.255.0
    mtu = 1500
    dhcp {
        enable = true
        mode = server
        relay_server = ""
        pool_start = 192.168.0.2
        pool_end = 192.168.0.100
        netmask = 255.255.255.0
        gateway = ""
        primary_dns = ""
        secondary_dns = ""
        wins_server = ""
    }
}

```

```

        lease_time = 120
        expert_options = ""
        debug_enable = false
    }
}
multi_ip {
    id = 1
    interface = lan0
    ip = 172.16.24.24
    netmask = 255.255.0.0
}
#
# set lan
network      Network Settings
multi_ip     Multiple IP Address Settings
vlan        VLAN
# set lan network 1(space+?)
interface    Interface
ip           IP Address
netmask     Netmask
mtu         MTU
dhcp        DHCP Settings
# set lan network 1 interface lan0
OK
# set lan network 1 ip 172.16.24.24           //set IP address for lan
OK                                           //setting succeed
# set lan network 1 netmask 255.255.0.0
OK
#
...
# config save_and_apply
OK                                           // save and apply current configuration, make you configuration effect

```

Example 6: CLI for setting Cellular

```

# show cellular all
sim {
    id = 1
    card = sim1
    phone_number = ""
    extra_at_cmd = ""
    network_type = auto
    band_select_type = all
    band_gsm_850 = false
    band_gsm_900 = false
    band_gsm_1800 = false

```

```
band_gsm_1900 = false
band_wcdma_850 = false
band_wcdma_900 = false
band_wcdma_1900 = false
band_wcdma_2100 = false
band_lte_800 = false
band_lte_850 = false
band_lte_900 = false
band_lte_1800 = false
band_lte_1900 = false
band_lte_2100 = false
band_lte_2600 = false
band_lte_1700 = false
band_lte_700 = false
band_tdd_lte_2600 = false
band_tdd_lte_1900 = false
band_tdd_lte_2300 = false
band_tdd_lte_2500 = false
}
sim {
  id = 2
  card = sim2
  phone_number = ""
  extra_at_cmd = ""
  network_type = auto
  band_select_type = all
  band_gsm_850 = false
  band_gsm_900 = false
  band_gsm_1800 = false
  band_gsm_1900 = false
  band_wcdma_850 = false
  band_wcdma_900 = false
  band_wcdma_1900 = false
  band_wcdma_2100 = false
  band_lte_800 = false
  band_lte_850 = false
  band_lte_900 = false
  band_lte_1800 = false
  band_lte_1900 = false
  band_lte_2100 = false
  band_lte_2600 = false
  band_lte_1700 = false
  band_lte_700 = false
  band_tdd_lte_2600 = false
  band_tdd_lte_1900 = false
  band_tdd_lte_2300 = false
```

```

    band_tdd_lte_2500 = false
}
# set(space+?)
at_over_telnet    cellular          ddns          dhcp          dns
event            firewall          ipsec         lan           link_manager
ntp              openvpn          reboot        route         serial_port
sms              snmp             syslog        system        user_management
vrrp
# set cellular(space+?)
    sim    SIM Settings
# set cellular sim(space+?)
    Integer    Index (1..2)

# set cellular sim 1(space+?)
    card                SIM Card
    phone_number        Phone Number
    extra_at_cmd        Extra AT Cmd
    network_type        Network Type
    band_select_type    Band Select Type
    band_gsm_850        GSM 850
    band_gsm_900        GSM 900
    band_gsm_1800       GSM 1800
    band_gsm_1900       GSM 1900
    band_wcdma_850      WCDMA 850
    band_wcdma_900      WCDMA 900
    band_wcdma_1900     WCDMA 1900
    band_wcdma_2100     WCDMA 2100
    band_lte_800        LTE 800 (band 20)
    band_lte_850        LTE 850 (band 5)
    band_lte_900        LTE 900 (band 8)

    band_tdd_lte_2300   TDD LTE 2300 (band 40)
    band_tdd_lte_2500   TDD LTE 2500 (band 41)
# set cellular sim 1 phone_number 18620435279
OK
...
# config save_and_apply
OK                                     // save and apply current configuration, make you configuration effect

```

Glossary

Abbr.	Description
AC	Alternating Current
APN	Access Point Name
ASCII	American Standard Code for Information Interchange
CE	Conformité Européene (European Conformity)
CHAP	Challenge Handshake Authentication Protocol
CLI	Command Line Interface for batch scripting
CSD	Circuit Switched Data
CTS	Clear to Send
dB	Decibel
dBi	Decibel Relative to an Isotropic radiator
DC	Direct Current
DCD	Data Carrier Detect
DCE	Data Communication Equipment (typically modems)
DCS 1800	Digital Cellular System, also referred to as PCN
DI	Digital Input
DO	Digital Output
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTMF	Dual Tone Multi-frequency
DTR	Data Terminal Ready
EDGE	Enhanced Data rates for Global Evolution of GSM and IS-136
EMC	Electromagnetic Compatibility
EMI	Electro-Magnetic Interference
ESD	Electrostatic Discharges
ETSI	European Telecommunications Standards Institute
EVDO	Evolution-Data Optimized
FDD LTE	Frequency Division Duplexing Long Term Evolution
GND	Ground
GPRS	General Packet Radio Service
GRE	generic route encapsulation
GSM	Global System for Mobile Communications
HSPA	High Speed Packet Access
ID	identification data
IMEI	International Mobile Equipment Identity
IP	Internet Protocol
IPsec	Internet Protocol Security
kbps	kbits per second
L2TP	Layer 2 Tunneling Protocol

Abbr.	Description
LAN	local area network
LED	Light Emitting Diode
M2M	Machine to Machine
MAX	Maximum
Min	Minimum
MO	Mobile Originated
MS	Mobile Station
MT	Mobile Terminated
OpenVPN	Open Virtual Private Network
PAP	Password Authentication Protocol
PC	Personal Computer
PCN	Personal Communications Network, also referred to as DCS 1800
PCS	Personal Communication System, also referred to as GSM 1900
PDU	Protocol Data Unit
PIN	Personal Identity Number
PLCs	Program Logic Control System
PPP	Point-to-point Protocol
PPTP	Point to Point Tunneling Protocol
PSU	Power Supply Unit
PUK	Personal Unblocking Key
R&TTE	Radio and Telecommunication Terminal Equipment
RF	Radio Frequency
RTC	Real Time Clock
RTS	Request to Send
RTU	Remote Terminal Unit
Rx	Receive Direction
SDK	Software Development Kit
SIM	subscriber identification module
SMA antenna	Stubby antenna or Magnet antenna
SMS	Short Message Service
SNMP	Simple Network Management Protocol
TCP/IP	Transmission Control Protocol / Internet Protocol
TE	Terminal Equipment, also referred to as DTE
Tx	Transmit Direction
UART	Universal Asynchronous Receiver-transmitter
UMTS	Universal Mobile Telecommunications System
USB	Universal Serial Bus
USSD	Unstructured Supplementary Service Data
VDC	Volts Direct current
VLAN	Virtual Local Area Network
VPN	Virtual Private Network

Abbr.	Description
VSWR	Voltage Stationary Wave Ratio
WAN	Wide Area Network
